Confidential Memorandum regarding the
Significance of the Proposed Encyclopaedia of the Negro

In presenting a plan for the proposed Encyclopaedia of the Negro to the various Foundations in order to secure proper financial support, I suggest emphasis on the following points:

First, Timeliness of such an Encyclopaedia. Interest in the facts concerning the past and present development of the Negro race has been greatly stimulated in the last twenty-five years. Studies have been made and published and others are in the making. It is fair to say that the old attitude of the scientific world toward the Negro race has largely changed during this time. For this reason it is essential to make available to the ordinary reader the present status of knowledge concerning the Negro. This is not because this knowledge is anywhere near complete, but it is necessary because we shall go forward more surely toward better scientific work and understanding if we can make it clear to the ordinary man, and particularly to the student, just what is already known today. Our casual knowledge always tends to lag behind scientific accomplishment, and it is still possible today to make and reiterate the most reactionary statements concerning Negroes which science has long disproved.

If, for instance, one wishes to make a reasonable and authentic statement concerning the Negroes in Africa, in North America, or the West Indies and Latin America, or concerning distinguished men of Negro descent, where would one look today in order to have reasonable authority for such statements and not find one's self flatly contradicted by current gossip and exaggeration? It is imperative today that present knowledge of this branch of the human family should be set down and made available in temperate, balanced exposition, for the use of the mass of those who would know and who seek further enlightenment. If in any line of knowledge one waits for definitive information no encyclopaedia would ever be written.

In my judgment as to the necessity of an Encyclopaedia today I have been strengthened by personal interviews during the last year with the leaders of thought in history, anthropology and sociology in various parts of the world. I have consulted large numbers of such persons in the United States and published their judgments. More lately I have talked with scientists in England, France, Belgium, Germany, Austria, and Japan. I have found practically unanimous opinion that such an Encyclopaedia is demanded and feasible in the present state of scientific knowledge.

Second, Who should carry out such a plan? Manifestly the leading scientists of the world who know the social sciences, and the development of the Negro race, should make the contributions to such an Encyclopaedia. The leadership in such an enterprise should be in the hands of those who look upon the Negro race as an integral branch of humanity, worthy of the same scientific attention and sympathetic study that other branches have received. If the work were done entirely under the auspices of Negroes there might be danger that they would not be able to furnish the scientific equipment and knowledge on all points that would be necessary; and they would naturally be tempted to make the study a brief for a long disadvantaged race, rather than a carefully balanced scientific statement. On the other hand, if the work were put entirely in the hands of white scientists, there would be equal danger that their lack of personal contact with the Negro and knowledge of his problems would lead to a serious error in appraisment and understanding. There might easily be wide gaps in the actual field of study and quite naturally there would obtrude itself here and there the old and widespread assumption of the sub-humanity of the Negro race. For this

reason it would be wise to have a collaboration between white and Negro scientific workers such as would include as far as possible the best available minds of the world, and at the same time, the widest and most sympathetic knowledge which could be had. No scientific work done by living, feeling men and dealing with humanity can be wholly impartial. Man must sympathize with misfortune, deplore evil, hope for good, recognize human fellowship. All that social science can do is so to limit natural human feeling by ascertained facts as to approach a fair statement of truth.

For this reason I have tried to gather into a cooperating group: first, the best known white scientists of America and Europe and, secondly, the best equipped scientists of Negro descent in America, the West Indies, South America, and Africa; in this latter case I have especially sought the younger men who have had the latest and best training. As a result I have, so far as Negroes are concerned, the large majority of the doctors of philosophy in history, sociology, and economics, trained in the best institutions of the United States and Europe during the last twenty-five years; among white scientists I have the promise of the widest and most interested cooperation from the leading anthropologists, sociologists, and historians of Europe, Africa, and Asia. The letters substantiating this statement are on file in this office.

There is another somewhat subtle but real reason for inter-racial cooperation. Young colored men of this generation are showing conspicuous ability in many lines of work. They are pressing hard against the gates of opportunity and these gates are opening less easily and widely than ability is asserting itself. The result is a widespread feeling that white America is determined not to recognize the Negro even when he excels, and the very presence of this feeling increases the unrest even in the case of Negroes who have not worked hard and do not possess real power to achieve. Particularly does this feeling exist in fields of science where the reluctance to give Negro scholars opportunity in laboratories and as research assistants make them suspect the color line even when it is not there. If now we could have at this particular time a conspicuous example of inter-racial fellowship in scientific work, with generous opportunity and recognition for the work of young scientists in the Negro race and collaboration between them and white scientists of both America and Europe, it would be an unusually fine thing in itself and a singularly wise proof that although the way of the black scholar may be difficult, it is by no means blocked. It would prove that the Foundations and philanthropy are willing not only to subsidize Negro work when it is segregated, but just as eager to help Negro scientific work of the highest grade and in conjunction with the world's best scientists if it is known that they can hold their own on the highest planes of endeavor. Also the value to Negro scholars of such unusual opportunity for associating with the world's best would be incalculable.

Third, Editorial procedure. The practical problem is how to bring these persons who are willing to cooperate, and who have the best knowledge of the subject, into such joint effort as will evolve the sort of Encyclopaedia that we wish. In order to facilitate this I have attempted certain preliminary work. In a way these attempts have involved a certain presumption and apparent one man effort, but I think the object attained has justified this method. I first sat down to make, with clerical and scientific assistance, an outline of the possible scope of an Encyclopaedia of the Negro race. This was primarily to impress upon those who had not given much attention to the subject, how large a field of interesting knowledge and exploration lay open for inclusion in such an Encyclopaedia. The possible subjects for treatment in this Encyclopaedia made up mimeographed pamphlets of one hundred and fifty pages, and this I sent out to a number of scientists and interested persons and asked for their criticism. Naturally, most of them had time only for very general criticism; quite a number made detailed

criticism of certain parts; a few like Professor Westermann of the University of Berlin voluntarily prepared a simplified list of subjects on Africa. From these criticisms and offers we shall have ready in this office in the late spring a dummy of four volumes indicating allocation of space to each of the proposed lists of subjects which an Encyclopaedia of the Negro might treat.

This will be, of course, by no means a final list. It will be simply a survey of the field which a board of editors can more carefully delimit and make practical. It will, however, save a lot of preliminary and costly speculation and confront the editorial board with a fairly clear idea of the field which might be covered.

In addition to this two editors-in-chief have been selected: A Negro and a white man, both of whom have given a life time to the study of the Negro race. They are both elderly men, selected because of their experience and because their selection symbolized racial cooperation in this work. It is proposed that they should be surrounded by a small group of younger editorial assistants, both colored and white, who should form the working nucleus of an efficient, well trained editorial board, and in case either or both chief-editors should find it necessary to retire before the work is finished they could easily be replaced by younger men. Around this smaller editorial group would be a larger group of consultants and advisers, and a still wider group of actual contributors.

Fourth, The Cost. The experience in the making of encyclopaedias, especially during recent years, has naturally made Foundations and contributors afraid of the large cost involved. An encyclopaedia well done is without doubt a costly enterprise. But on the other hand, there have been certain obvious wastes, and a certain lack of planning in many enterprises which can guide the present attempt. Usually, the first idea in the mind of those who plan an encyclopaedia is to cover the field with scientific thoroughness, making the matter of cost a secondary consideration. In the case of an encyclopaedia which seeks to exhaust a world field of knowledge this idea must be made paramount. But for an encyclopaedia which covers a special field like this, it is possible as it seems to me to take advantage of the experience of the past and budget the cost and then keep strenuously within the limit of that budget. I should say, for instance, in the Encyclopaedia of the Negro, our task would be not to exhaust the field of information but to set down the plan frankly as an attempt to see within a given expense how complete a picture and scientific statement of the past and present of the Negro race could be made, knowing that this limitation of cost would put necessary boundaries to the extent of the information that could be gathered and printed.

I would suggest, therefore, if the proposed budget in the memorandum totalling $200,000.00 does not seem satisfactory to the Foundations, the Editors consult further with persons formerly connected with other encyclopaedias recently published. The Trustees would, of course, be delighted, should the Foundations so desire, to have them represented on such a committee. This committee could carefully guide and allocate expenditures during the preparation and manufacture of the Encyclopaedia so that the cost would fall within the limit of the budget.

It seems to me that with this practical limitation of cost, and with the large scientific cooperation which has been secured, we may be able to make an epoch making contribution to three things: the establishment of truth concerning the Negro race, the cooperation of science regardless of race difference, the limitation of expense according to available funds.

Memorandum to the President of the Phelps-Stokes Fund regarding the projected Encyclopaedia of the Negro

In presenting a plan for the proposed Encyclopaedia of the Negro to the various Foundations in order to secure proper financial support, I suggest emphasis on the following points:

First, Timeliness of such an Encyclopaedia. Interest in the facts concerning the past and present development of the Negro race has been greatly stimulated in the last twenty-five years. Studies have been made and published and others are in the making. It is fair to say that the old attitude of the scientific world toward the Negro race has largely changed during this time. For this reason it is essential to ~~fix and~~ make available to the ordinary reader the present status of knowledge concerning the Negro. This is not because this knowledge is anywhere near complete, but it is necessary because we shall go forward more surely toward better scientific work and understanding if we can make it clear to the ordinary man, and particularly to the student, just what is already known today. Our casual knowledge always tends to lag behind scientific accomplishment, and it is still possible today to make and reiterate the most reactionary statements concerning Negroes which science has long disproved.

If, for instance, one wishes to make a reasonable and authentic statement concerning the Negroes in Africa, in North America, or the West Indies and Latin America, or concerning distinguished men of Negro descent, where would one look today in order to have reasonable authority for such statements and not find one's self flatly contradicted by current gossip and exaggeration? It is imperative today that present knowledge of this branch of the human family should be set down and made available in temperate, balanced exposition, for the use of the mass of those who would know and who seek further enlightenment. If in any line of knowledge one waits for definitive information no encyclopaedia would ever be written.

In my judgment as to the necessity of an Encyclopaedia today I have been strengthened by personal interviews during the last year with the leaders of thought in history, anthropology and sociology in various parts of the world. I have consulted large numbers of such persons in the United States and published their judgments. More lately I have talked with scientists in England, France, Belgium, Germany, Austria, and Japan. I have found practically unanimous opinion that such an Encyclopaedia is demanded and feasible in the present state of scientific knowledge.

Second, Who should carry out such a plan? Manifestly the leading scientists of the world who know the social sciences, and the development of the Negro race, should make the contributions to such an Encyclopaedia. The leadership in such an enterprise should be in the hands of those who look upon the Negro race as an integral branch of humanity, worthy of the same scientific attention and sympathetic study that other branches have received. If the work were done entirely under the auspices of Negroes there might be danger that they would not be able to furnish the scientific equipment and knowledge on all points that would be necessary; and they would naturally be tempted to make the study a brief for a long disadvantaged race, rather than a carefully balanced scientific statement. On the other hand, if the work were put entirely in the hands of white scientists, there would be equal danger that their lack of personal contact with the Negro and knowledge of his problems would lead to a

SRS-9-44

serious error in appraisment and understanding. There might easily be wide gaps in the actual field of study and quite naturally there would obtrude itself here and there the old and widespread assumption of the sub-humanity of the Negro race. For this reason it would be wise to have a collaboration between white and Negro scientific workers such as would include as far as possible the best available minds of the world, and at the same time, the widest and most sympathetic knowledge which could be had. No scientific work done by living feeling men and dealing with humanity can be wholly impartial. Man must sympathize with misfortune, deplore evil, hope for good, recognize human fellowship. All that social science can do is so to limit natural human feeling by ascertained facts as to approach a fair statement of truth.

For this reason I have tried to gather into a cooperating group: first, the best known white scientists of America and Europe and, secondly, the best equipped scientists of Negro descent in America, the West Indies, South America, and Africa; in this latter case I have especially sought the younger men who have had the latest and best training. As a result I have, so far as Negroes are concerned, the large majority of the doctors of philosophy in history, sociology, and economics, trained in the best institutions of the United States and Europe during the last twenty-five years; among white scientists I have the promise of the widest and most interested cooperation from the leading anthropologists, sociologists, and historians of Europe, Africa, and Asia. The letters substantiating this statement are on file in this office.

There is another somewhat subtle but real reason for inter-racial cooperation. Young colored men of this generation are showing conspicuous ability in many lines of work. They are pressing hard against the gates of opportunity and these gates are opening less easily and widely than ability is asserting itself. The result is a widespread feeling that white America is determined not to recognize the Negro even when he excels, and the very presence of this feeling increases the unrest even in the case of Negroes who have not worked hard and do not possess real power to achieve. Particularly does this feeling exist in fields of science where the reluctance to give Negro scholars opportunity in laboratories and as research assistants make them suspect the color line even when it is not there. If now we could have at this particular time a conspicuous example of inter-racial fellowship in scientific work, with generous opportunity and recognition for the work of young scientists in the Negro race and collaboration between them and white scientists of both America and Europe, it would be an unusually fine thing in itself and a singularly wise proof that although the way of the black scholar may be difficult, it is by no means blocked. It would prove that the Foundations and philanthropy are willing not only to subsidize Negro work when it is segregated, but just as eager to help Negro scientific work of the highest grade and in conjuction with the world's best scientists if it is known that they can hold their own on the highest planes of endeavor. Also the value to Negro scholars of such unusual opportunity for associating with the world's best would be ~~of~~ incalculable ~~value~~.

Third, Editorial procedure. The practical problem is how to bring these persons who are willing to cooperate, and who have the best knowledge of the subject, into such joint effort as will evolve the sort of Encyclopaedia that we wish. In order to facilitate this I have attempted certain preliminary work. In a way these attempts have involved a certain presumption and apparent one man effort, but I think the object attained has justified this method. I first sat down to make, with clerical and scientific assistance, an outline of the possible scope of an Encyclopaedia of the Negro race. This was primarily to impress upon those who had not given much attention to the subject, how large a field of interesting knowled e and exploration

lay open for inclusion in such an Encyclopaedia. The possible subjects for treatment in this Encyclopaedia made up mimeographed pamphlets of one hundred and fifty pages, and this I sent out to a number of scientists and interested persons and asked for their criticism. Naturally, most of them had time only for very general criticism; quite a number made detailed criticism of certain parts; a few like Professor Westermann of the University of Berlin voluntarily prepared a simplified list of subjects on Africa. From these criticisms and offers we shall have ready in this office in the late spring a dummy of four volumes indicating allocation of space to each of the proposed lists of subjects which an Encyclopaedia of the Negro might treat.

This will be, of course, by no means a final list. It will be simply a survey of the field which a board of editors can more carefully delimit and make practical. It will, however, save a lot of preliminary and costly speculation and confront the editorial board with a fairly clear idea of the field which might be covered.

In addition to this two editors-in-chief have been selected: a Negro and a white man, both of whom have given a life time to the study of the Negro race. They are both elderly men, selected because of their experience and because their selection symbolized racial cooperation in this work. It is proposed that they should be surrounded by a small group of younger editorial assistants, both colored and white, who should form the working nucleus of an efficient, well trained editorial board, and in case either or both chief-editors should find it necessary to retire before the work is finished they could easily be replaced by younger men. Around this smaller editorial group would be a larger group of consultants and advisers, and a still wider group of actual contributors.

Fourth, The Cost. The experience in the making of encyclopaedias, especially during recent years, has naturally made Foundations and contributors afraid of the large cost involved. An encyclopaedia well done is without doubt a costly enterprise. But on the other hand, there have been certain obvious wastes, and a certain lack of planning in many enterprises which can guide the present attempt. Usually, the first idea in the mind of those who plan an encyclopaedia is to cover the field with scientific thoroughness, making the matter of cost a secondary consideration. In the case of an encyclopaedia which seeks to exhaust a world field of knowledge this idea must be made paramount. But for an encyclopaedia which covers a special field like this, it is possible as it seems to me to take advantage of the experience of the past and budget the cost and then keep strenuously within the limit of that budget. I should say, for instance, in the Encyclopaedia of the Negro, our task would be not to exhaust the field of information but to set down the plan frankly as an attempt to see within a given expense how complete a picture and scientific statement of the past and present of the Negro race could be made, knowing that this limitation of cost would put necessary boundaries to the extent of the information that could be gathered and printed.

42-6-324

I would suggest, therefore, if the proposed budget in the memorandum totalling $200,000 does not seem satisfactory to the Foundations, the Editors consult further with persons formerly connected with other encyclopaedias recently published. The Trustees would, of course, be delighted, should the Foundations so desire, to have them represented on such a committee. This committee could carefully guide and allocate expenditures during the preparation and manufacture of the Encyclopaedia so that the cost would fall within the limit of the budget.

It seems to me that with this practical limitation of cost, and with the large

scientific cooperation which has been secured, we may be able to make an epoch making contribution to three things: the establishment of truth concerning the Negro race, the cooperation of science regardless of race difference, the limitation of expense according to available funds.

DO WE NEED AN ENCYCLOPAEDIA OF THE NEGRO?

There has been in the last decade a wide increase of interest in and attention toward the Negro race and its descendants in various parts of the world. This includes the question of the relation of the peoples of Africa to the future development of civilization; the changing problem of the Negro in the United States; the question of the future of the West Indies and the racial integration of South and Central America. Today the Negroid peoples, that is, those usually called Negroes and those related to them by descent and culture, are recognized as occupying a wide and important position in the world which calls for increasing attention.

This has been emphasized by our new and changing ideas of race. The whole biological conception of races separated from each other by inheritance of fixed characters, has been changed to new conceptions of varying group characteristics and cultural developments. Anthropology is studying primitive groups not as curiosities, but as throwing light upon present conditions; and a new conception of the unity of humanity not simply in its present forms but its methods of development, is becoming current. History and biography are making new and intensive efforts to re-picture the past of the darker races and the literature of cultural development and contact is increasing.

47-18-119

There have been published in the last ten years scores of books with new and reliable information concerning Africa and the Negro race. These include, to name but a few, studies of the tribes of Africa by Schapera, Rattray, Meek, Junod, Soga, Krige, Doke, Hollis, Torday, Monica Hunter and a score of other equally searching investigations; there are studies in African colonial administration by Perham, Brooks, Thurnwald, Orde-Browne, Mair, Macmillian, Cameron and Oldham; large and significant summaries of information concerning Africa have been made by Delafosse, Worthington, Fitzgerald and Frankel; and especially the recent AFRICAN SURVEY by Lord Hailey and his co-workers, and frazer's NATIVE RACES OF AFRICA AND MADAGASCAR.

Concerning the Negro in America there have been published recently studies of the economic development of the plantation, the effect of the depression, changes and growth in literature and education; Work's BIBLIOGRAPHY OF THE NEGRO covering both Africa and America; monographs by Charles Johnson, Abram Harris, Ralph Bunche, Carter Woodson, Franklin Frazier and others; there will be ready in 1940 an important survey by Dr. Karl G. Myrdal of Sweden and a dozen co-workers, while the Journal of Negro Education and the Journal of Negro History are printing numbers of intensive studies. Careful studies of Negro history and culture have begun in Brazil and other parts of South America, and have long been pursued in the West Indies. On the other hand there is a dangerous and misleading lag between scientific knowledge of the Negro and intelligent interpretation today, and popular conception handed down from the past.

The Negro race today, in the minds of most persons, is set apart as a group of unusual and different individuals; and this attitude can be met only by setting forth the facts of the situation and letting the world know that the essential humanity of the black race is today well attested by a body of facts agreed upon, in all essential particulars, by those whose opinions are worth listening to.

Many persons who are aware of this do not realize how widespread is the implicit and open denial of these facts. To quote a few instances: the book on CONTEMPORARY SOCIOLOGICAL THEORIES by the first professor of sociology ever appointed at Harvard University says of Negroes "In Africa they had as many chances in the long course of history to create complex forms of culture as the white race had elsewhere and yet nothing has been created." (p. 298) "Excepting, perhaps, a few heavyweight champions and eminent singers, the American Negroes have not up to this time produced a single genius of great caliber." (p. 298) "It is worthy of notice that the studies of Ferguson, E. B. Reuter, and of some others, have shown that the greater the infusion of white blood into the Negro, the higher is his intelligence quotient." (p. 297)

A widely read American author says concerning the Civil War "The American Negroes are the only people in the history of the world, so far as I know, that ever became

free without any effort of their own." (MEET GENERAL GRANT, by W. E. Woodward). In a recent popular magazine article, Morrison Holliday writes "The black man in the South, 90 per cent of him, at least, belongs to a primitive race barely removed from savagery." The thirteenth edition of the Encyclopaedia Brittanica in its article on anthropology points out that the sutures in the heads of Negro children solidify early so that mental development in the race is impossible. The fourteenth edition printed the assertion of a Harvard professor that colored members of Southern legislatures during Reconstruction engaged in a "saturnalia of corrupt expenditure." A governor of the African colony of Kenya testified before a Parliamont committee with regard to the land question "The African, of course, has no views at all."

There is also almost inextricable confusion as to what "Negro" means; as to whether Ethiopia was a civilization of black men; as to whether there are any evidences of culture and art in Africa. In the renewed discussion of race due to the plight of the Jews in Germany, one notices repeated tendencies to except the Negro race from general statements concerning essential racial equality.

In most cases the persons who make these statements are not motivated by any enmity toward the Negro race or any conscious prejudice; they simply have not themselves carefully studied the situation and they cannot easily find authoritative reference to which they can turn. Present thought and action are all too often gyided by old and discarded theories of race and heredity; by misleading emphasis and silence of former histories. These conceptions are passed on to younger generations of s udents by current textbooks, popular histories and even in public discussion. In the case of the average reader, even when intelligent, or of students in universities, the case is even more baffling. There is hardly an ordinary question, from a clear discussion of race, to a definition of a Negro, the history of African slav ry and the present conditions in Africa, to which he can find a clear and intelligent answer upon which he may depend. On the contrary thereis hardly an attitude or a prejudice that he may not find seriously advocated and to some degree corroborated and substantiated in books printed by reputable publishers and placed on the shelves of our best libraries. The path of the

419-12-121

inquiring student is thus beset by the most opposite and contradictory statements.

There is increasing demand for intelligent guidance on the status of the Negro and easier availability of our present knowledge of facts. We have had a sudden increase of discussion concerning race in our day based on discredited theses and threatening widespread disaster. We are having demands for colonial transfer and readjustment with inevitable examination of the whole problem of the relation of Negro peoples to modern industry and government. There is unrest and apprehension among the colored races and in all the current social and economic changes in America, the condition and future of twelve million Americans of Negro descent is necessarily involved. There is need for young pupils and for mature students, of a statement of the present condition of our knowledge concerning the darker races and especially concerning Negroes, which would make available our present scientific knowledge and set aside the vast accumulation of tradition and prejudice which makes such knowledge difficult now for the layman to obtain: a Vade Mecum for schools, editors, libraries, for Europeans inquiring into the race status here, for South Americans and Africans. In current encyclopaedias there is notable lack of space given to these matters. In a recently projected encyclopaedia of American history a scholar was asked to treat the relation of the Negro to United States history in six hundred words. Writers who are expert in many fields may be quite ignorant in the field of race or in matters concerning the Negro.

Our knowledge of the Negro today is not, of course, entirely complete; there are many gaps where further information and more careful study are needed; but this is the case in almost every branch of knowledge. Knowledge is never complete and in few subjects does a time arrive when an encyclopaedia of its knowledge is demanded because no further information is expected. Indeed the need of an encyclopaedia is greatest when a stage is reached where there is a distinct opportunity to bring together and set down a clear and orderly statement of the facts already known and agreed upon, for the sake of establishing a base for further advance and further study.

Under such circumstances it would seem that an Encyclopaedia of the Negro is necessary.

47-13-122

The idea of encyclopaedias has grown slowly but surely. In the first century we had Pliny's NATURAL HISTORY; in the fifth and seventh and thirteenth centuries appeared other encyclopaedias treating "of everything that can be learned by man in this life". As the field of science grew and the trammels of church dogma were broken down, there came in the eighteenth century three great encyclopaedias: the French Encyclopedie, 1751-65; the first edition of the Encyclopaedia Britannica, 1768-71; and the Conversations-Lexicon, 1796-1808. Today the place of the encyclopaedia as a unified source of knowledge, and guide to reading is generally recognized. This has been followed by encyclopaedias which confine themselves to different fields of science like chemistry, geology, medicine and the like. Finally in the social sciences, there have come the beginnings of encyclopaedias: the Encyclopaedia of Religon, the Catholic Encyclopaedia, the Jewish Encyclopaedia and the Encyclopaedia of the Social Sciences, are cases in point.

In such encyclopaeias, touching social problems, there is always an initial prejudice to over come. People have inherited ideas and attitudes which more or less unconsciously they are unwilling to change; but precisely for such reasons, encyclopaedias are neccessary. The editors of the Jewish Encyclopaedia said frankly "Hitherto the difficulties in the way of such an adequate and impartial presentation have b en insuperable. Deep-rooted prejudices have prevented any sympathetic interest in Judaism on the part of Christian theologians, or in Christianity on the part of the rabbis. These theological antipathies have now abated, and both sides are better prepared to receive the truth."

47-12-123

The Catholics complained that in the case of many matters in which Catholics were interested "proper answers to the questions proposed are not to be met with in English literature. Even the writings of the well intentioned authors are at times disfigured by serious errors on Catholic subjects, which are for the most part due, not to ill-will, but to lack of knowledge."

In the case of the proposed Enc clopaedia of the Negro these difficulties are increased because the prejudices and memories surrounding the subject have been more intense. There are hurts and fears; there are current controversies which made a strictly scientific point of view of questions affecting the Negro race, difficult. Notwithstand

ing this, the body of accumulated knowledge is today so wide and dependable that it becomes all the more necessary that current social thought and discussion should to as large an extent as possible be placed upon a basis of accepted scientific conclusion.

Not counting some earlier proposals which did not come to fruition, there has been an attempt since 1932 to secure funds to edit and publish an Encyclopaedia of the Negro. It has naturally brought forward a good many fundamental questions. There have been those who have said that a Catholic Encyclopaedia must be edited by Catholics; a Jewish Encyclopaedia mainly by Jews; and a Negro Encyclopaedia mainly by Negroes. On the other hand it has been pointed out that his at least lays such efforts open to the charge of partisanship and defensive propaganda.

The editors of the Jewish Encyclopaedia felt this difficulty when they said "The editors have felt a special sense of responsibility with regard to this work, in which for the first time the claims to recognition of a whole race and its ancient religion are put forth in a form approaching completeness. They have had to consider susceptibilities among Jews and others, and have been especially solicitous that nothing should be set down which could hurt the feelings of the most sensitive." Yet they proposed to edit such an encyclopaedia "With an exhaustiveness which has never been attempted before - without concealing facts or resorting to apology." The Catholic editors were sure that even "among Protestants the desire for a more intimate and accurate knowledge of things Catholic increases in proportion to the growth of the church in numbers and in importance."

In the case of the Negro the matter is even more complicated. There are many groups of Negroes. Educated black men in West Africa and East Africa might naturally think that their interests and points of view would be ignored. American Negroes are apt to think of themselves as the most representative group of their race and entitled to most space and consideration. The West Indians and the Afro-Brazilians have similar claims for consideration. Then too, among the whites, there are groups vitally interested in the future of the Negro, anxious to repel disturbing propaganda; fearful of any artificial unification of widely separate colored group interests and anxious to guide Negro

47-12-124

development in the lines of their own national interests. Thus the English administrators, the French, Belgian and other colonial investors, the South African Nationalists and students and statesmen in white America would hesitate at seeing an encyclopaedia edited and published which might not take into account their points of view and wishes. Missionaries, historians, sociologists and psychologists all would have distinct ideas concerning the scope and treatment in such an encyclopaedia.

The present proposal has sought to take all these points of view into consideration; it believes that the present situation, just because of the widespread interest in the Negro from these different points of view, and because of the unusual number of scholarly experts available, indicates not only the need of this encyclopaedia, but the possibility of so planning and editing the work as to make firm that solid scientific foundation upon which race in general, and the Negro race in particular, can be discussed and the real questions upon which there is still allowable differences of opinion more clearly fixed and stated.

We have interested groups of colored and white men, and have consulted with the leading authorities of every modern country: the United States, the West Indies and South America, England, Belgium, France, Germany, Italy and Spain; and especially white and black scholars in various parts of Africa; we have the promisee cooperation of what we beli ve is the best available body of scholars in the world.

47-13-135

There follows of course the question as to how this ability can be used and apportioned to its task and how the space of the encyclopaedia can best be laid out. We are trying to make this definite by issuing next fall a proposed list of subjects, with some indication of the allocation of space. This list has been suggested and critic zed by many of the best scholars of the world. The selection of authorities for the actual writing, and the character of the finished work, must of course depend upon the board of editors and for that reason a board which has the full confidence of the promoters and the scientific world is indispensable. We are asking support for this project as a worthy one, under the direction of the best board of editors which can be procured. We

do not for a moment assume that the present temporary choice of editors is or deserves to be, final; but we do believe that the project is a worthy one; that there is distinct and present call for such an encyclopaedia and that immediate steps ought to be taken to realize this proposal, to use the best scholarship of the world in placing before average, intelligent citizens of the world a carefully considered statement concerning the past and present of the Negro race. Nothing in the long run would serve better to replace prejudice, pre-conception and bitter memories with scientific fact and balanced judgment.

DO WE NEED AN ENCYCLOPAEDIA OF THE NEGRO?

There has been in the last decade a wide increase of interest in and attention toward the Negro race and its descendants in various parts of the world. This includes the question of the relation of the peoples of Africa to the future development of civilization; the changing problem of the Negro in the United States; the question of the future of the West Indies and the racial integration of South and Central America. Today the Negroid peoples, that is, those usually called Negroes and those related to them by descent and culture, are recognized as occupying a wide and important position in the world which calls for increasing attention.

This has been emphasized by our new and changing ideas of race. The whole biological conception of races separated from each other by inheritance of fixed characters, has been changed to new conceptions of varying group characteristics and cultural developments. Anthropology is studying primitive groups not as curiosities, but as throwing light upon present conditions; and a new conception of the unity of humanity not simply in its present forms but its methods of development, is becoming current. History and biography are making new and intensive efforts to re-picture the past of the darker races and the literature of cultural development and contact is increasing.

There have been published in the last ten years scores of books with new and reliable information concerning Africa and the Negro race. These include, to name but a few, studies of the tribes of Africa by Schapera, Rattray, Meek, Junod, Soga, Krige, Doke, Hollis, Torday, Monica Hunter and a score of other equally searching investigations; there are studies in African colonial administration by Perham, Brooks, Thurnwald, Orde-Browne, Mair, Macmillian, Cameron and Oldham; large and significant summaries of information concerning Africa have been made by Delafosse, Worthington, Fitzgerald and Frankel; and

especially the recent AFRICAN SURVEY by Lord Hailey and his co-workers, and Frazer's NATIVE RACES OF AFRICA AND MADAGASCAR.

Concerning the Negro in America there have been published recently studies of the economic development of the plantation, the effect of the depression, changes and growth in literature and education; Work's Bibliography of the Negro covering both Africa and America; monographs by Charles Johnson, Abram Harris, Ralph Bunche, Carter Woodson, Franklin Frazier and others; there will be ready in 1940 an important survey by Dr. Karl G. Myrdal of Sweden and a dozen co-workers, while the Journal of Negro Education and the Journal of Negro History are printing numbers of intensive studies. Careful studies of Negro history and culture have begun in Brazil and other parts of South America, and have long been pursued in the West Indies. On the other hand there is a dangerous and misleading lag between scientific knowledge of the Negro and intelligent interpretation today, and popular conception handed down from the past.

The Negro race today, in the minds of most persons, is set apart as a group of unusual and different individuals; and this attitude can be met only by setting forth the facts of the situation and letting the world know that the essential humanity of the black race is today well attested by a body of facts agreed upon, in all essential particulars, by those whose opinions are worth listening to.

Many persons who are aware of this do not realize how widespread is the implicit and open denial of these facts. To quote a few instances: the book on CONTEMPORARY SOCIOLOGICAL THEORIES by the first professor of sociology ever appointed at Harvard University says of Negroes "In Africa they had as many chances in the long course of history to create complex forms of culture as the white race had elsewhere and yet nothing has been created." (p. 298) "Excepting, perhaps, a few heavyweight champions and eminent singers, the American Negroes have not up to this time produced a single genius of great

caliber." (p. 298) "It is worthy of notice that the studies of Ferguson, E. B. Reuter, and of some others, have shown that the greater the infusion of white blood into the Negro, the higher is his intelligence quotient." (p. 297)

A widely read American author says concerning the Civil War "The American Negroes are the only people in the history of the world, so far as I know, that ever became free without any effort of their own." (MEET GENERAL GRANT, by W. E. Woodward) In a recent popular magazine article, Morrison Holliday writes "The black man in the South, 90 per cent of him, at least, belongs to a primitive race barely removed from savagery." The thirteenth edition of the Encyclopaedia Brittanica in its article on anthropology points out that the sutures in the heads of Negro children solidify early so that mental development in the race is impossible. The fourteenth edition printed the assertion of a Harvard professor that colored members of Southern legislatures during Reconstruction engaged in a "saturnalia of corrupt expenditure." A governor of the African colony of Kenya testified before a Parliament committee with regard to the land question "The African, of course, has no views at all."

There is also almost inextricable confusion as to what "Negro" means; as to whether Ethiopia was a civilization of black men; as to whether there are any evidences of culture and art in Africa. In the renewed discussion of race due to the plight of the Jews in Germany, one notices repeated tendencies to except the Negro race from general statements concernin essential racial equality.

In most cases the persons who make these statements are not motivated by any enmity toward the Negro race or any conscious prejudice; They simply have not themselves carefully studied the situation and they cannot easily find authoritative references to which they can turn. Present thought and action are all too often guided by old and discarded theories of race and heredity;

by misleading emphasis and silence of former histories. These conceptions are passed on to younger generations of students by current textbooks, popular histories and even in public discussion. In the case of the average reader, even when intelligent, or of students in universities, the case is even more baffling. There is hardly an ordinary question, from a clear discussion of race, to a definition of a Negro, the history of African slavery and the present conditions in Africa, to which he can find a clear and intelligent answer upon which he may depend. On the contrary there is hardly an attitude or a prejudice that he may not find seriously advocated and to some degree corroborated and substantiated in books printed by reputable publishers and placed on the shelves of our best libraries. The path of the inquiring student is thus beset by the most opposite and contradictory statements.

There is increasing demand for intelligent guidance on the status of the Negro and easier availability of our present knowledge of facts. We have had a sudden increase of discussion concerning race in our day based on discredited theses and threatening widespread disaster. We are having demands for colonial transfer and readjustment with inevitable examination of the whole problem of the relation of Negro peoples to modern industry and government. There is unrest and apprehension among the colored races and in all the current social and economic changes in America, the condition and future of twelve million Americans of Negro descent is necessarily involved. There is need for young pupils and for mature students, of a statement of the present condition of our knowledge concerning the darker races and especially concerning Negroes, which would make available our present scientific knowledge and set aside the vast accumulation of tradition and prejudice which makes such knowledge difficult now for the layman to obtain: a Vade Mecum for schools, editors, libraries, for Europeans inquiring into the race status here, for South Americans and Africans. In current encyclopaedias there is notable lack of space given to these matters. In a recently projected encyclopaedia of American history a

scholar was asked to treat the relation of the Negro to United States history in six hundred words. Writers who are expert in many fields may be quite ignorant in the field of race or in matters concerning the Negro. Our knowledge of the Negro today is not, of course, entirely complete; there are many gaps where further information and more careful study are needed; but this is the case in almost every branch of knowledge. Knowledge is never complete and in few subjects does a time arrive when an encyclopaedia of its knowledge is demanded because no further information is expected. Indeed the need of an encyclopaedia is greatest when a stage is reached where there is a distinct opportunity to bring together and set down a clear and orderly statement of the facts already known and agreed upon, for the sake of establishing a base for further advance and further study.

Under such circumstances it would seem that an Encyclopaedia of the Negro is necessary.

The idea of encyclopaedias has grown slowly but surely. In the first century we had Pliny's NATURAL HISTORY; in the fifth and seventh and thirteenth centuries appeared other encyclopaedias treating "of everything that can be learned by man in this life". As the field of science grew and the trammels of church dogma were broken down, there came in the eighteenth century three great encyclopaedias: the French Encyclopédie, 1751-65; the first edition of the Encyclopaedia Britannica, 1768-71; and the Conversations-Lexicon, 1796-1808. Today the place of the encyclopaedia as a unified source of knowledge, and guide to reading is generally recognized. This has been followed by encyclopaedias which confine themselves to different fields of science like chemistry, geology, medicine and the like. Finally in the social sciences, there have come the beginnings of encyclopaedias: the Encyclopaedia of Religion, the Catholic Encyclopaedia, the Jewish Encyclopaedia and the Encyclopaedia of the Social Sciences, are cases in point.

In such encyclopaedias, touching social problems, there is always an initial prejudice to overcome. People have inherited ideas and attitudes which more or less unconsciously they are unwilling to change; but precisely for such reasons, encyclopaedias are necessary. The editors of the Jewish Encyclopaedia said frankly "Hitherto the difficulties in the way of such an adequate and impartial presentation have been insuperable. Deep-rooted prejudices have prevented any sympathetic interest in Judaism on the part of Christian theologians, or in Christianity on the part of the rabbis. These theological antipathies have now abated, and both sides are better prepared to receive the truth."

The Catholics complained that in the case of many matters in which Catholics were interested "proper answers to the questions proposed are not to be met with in English literature. Even the writings of the well intentioned authors are at times disfigured by serious errors on Catholic subjects, which are for the most part due, not to ill-will, but to lack of knowledge."

In the case of the proposed Encyclopaedia of the Negro these difficulties are increased because the prejudices and memories surrounding the subject have been more intense. There are hurts and fears; there are current controversies which make a strictly scientific point of view of questions affecting the Negro race, difficult. Notwithstanding this, the body of accumulated knowledge is today so wide and dependable that it becomes all the more necessary that current social thought and discussion should to as large an extent as possible be placed upon a basis of accepted scientific conclusion.

Not counting some earlier proposals which did not come to fruition, there has been an attempt since 1932 to secure funds to edit and publish an Encyclopaedia of the Negro. It has naturally brought forward a good many fundamental questions. There have been those who have said that a Catholic Encyclopaedia

must be edited by Catholics; a Jewish Encyclopaedia mainly by Jews; and a Negro Encyclopaedia mainly by Negroes. On the other hand it has been pointed out that this at least lays such efforts open to the charge of partisanship and defencive propaganda.

The editors of the Jewish Encyclopaedia felt this difficulty when they said "The editors have felt a special sense of responsibility with regard to this work, in which for the first time the claims to recognition of a whole race and its ancient religion are put forth in a form approaching completeness. They have had to consider susceptibilities among Jews and others, and have been especially solicitous that nothing should be set down which could hurt the feelings of the most sensitive." Yet they proposed to edit such an encyclopaedia "With an exhaustiveness which has never been attempted before - without concealing facts or resorting to apology." The Catholic editors were sure that even "among Protestants the desire for a more intimate and accurate knowledge of things Catholic increases in proportion to the growth of the Church in numbers and in importance."

In the case of the Negro the matter is even more complicated. There are many groups of Negroes. Educated black men in West Africa and East Africa might naturally think that their interests and points of view would be ignored. American Negroes are apt to think of themselves as the most representative group of their race and entitled to most space and consideration. The West Indians and the Afro-Brazilians have similar claims for consideration. Then too, among the whites, there are groups vitally interested in the future of the Negro, anxious to repel disturbing propaganda; fearful of any artificial unification of widely separate colored group interests and anxious to guide Negro development in the lines of their own national interests. Thus the English administrators, the French, Belgian and other colonial investors, the South

African Nationalists and students and statesmen in white America would hesitate at seeing an encyclopaedia edited and published which might not take into account their points of view and wishes. Missionaries, historians, sociologists and psychologists all would have distinct ideas concerning the scope and treatment in such an encyclopaedia.

The present proposal has sought to take all these points of view into consideration; it believes that the present situation, just because of the widespread interest in the Negro from these different points of view, and because of the unusual number of scholarly exports available, indicates not only the need of this encyclopaedia, but the possibility of so planning and editing the work as to make firm that solid scientific foundation upon which race in general, and the Negro race in particular, can be discussed and the real questions upon which there is still allowable differences of opinion more clearly fixed and stated.

We have interested groups of colored and white men, and have consulted with the leading authorities of every modern country: the United States, the West Indies and South America, England, Belgium, France, Germany, Italy and Spain; and especially white and black scholars in various parts of Africa; We have the promised cooperation of what we believe is the best available body of scholars in the world.

There follows of course the question as to how this ability can be used and apportioned to its task and how the space of the encyclopaedia can best be laid out. We are trying to make this definite by issuing next fall a proposed list of subjects, with some indication of the allocation of space. This list ~~which~~ has been suggested and criticized by many of the best scholars of the world. The selection of authorities for the actual writing, and the character of the finished work, must of course depend upon the board of editors and for that

reason a board which has the full confidence of the promoters and the scientific world is indispensable. We are asking support for this project as a worthy one, under the direction of the best board of editors which can be procured. We do not for a moment assume that the present temporary choice of editors is or deserves to be, final, but we do believe that the project is a worthy one; that there is distinct and present call for such an encyclopaedia and that immediate steps ought ot be taken to realize this proposal, to use the best scholarship of the world in placing before average, intelligent citizens of the world a carefully considered statement concerning the past and present of the Negro race. Nothing in the long run would serve better to replace prejudice, pre-conception and bitter memories with scientific fact and balanced judgment.

While many people would desire an Encyclopaedia of the Negro and would recognize as valid most of the foregoing arguments, yet because the Negro problem is still in such a controversial stage, not only in the United States, but in South Africa and in other places, they would naturally fear that such a work might prove to be a passionate and over-emphasized defense of the Negro; or, on the other hand, a series of articles which, in the endeavor to avoid controversy or personal sensibilities would succeed in saying nothing of real value or enlightenment.

We who are advocating the Encyclopaedia of the Negro recognize these pitfalls clearly and for that very reason are determined to avoid them. The Encyclopaedia will not be designed to "make a case" by neglecting or deriding views merely because they are derogatory; or adopting views that are pleasant or encouraging merely to please. After all the Negro himself would be the chief loser from an encyclopaedia which did not gain the respect of the world of scholarship; and the Negro's interests would be best served by a work so fair, so objective and so thorough that it would be accepted everywhere and for many years to come as the most authoritative source of information.

On the other hand, where there are controversial subjects and where science has spoken no final word, an encyclopaedia should present a fair statement of the present position of the controversy. All encyclopaedias face difficulties of this sort; undoubtedly the Encyclopaedia of the Negro, like the Encyclopaedia of the Social Sciences, would have an unusual task in these respects; but we firmly believe that the work could be accomplished with a large measure of success, if the difficulties are frankly faced and the whole work done with a broad spirit of tolerance and wide reliance upon the best scholarship of the day.

On the other hand, where there are controversial subjects and where science has spoken no final word, an encyclopaedia should present a fair statement of the present position of the controversy. All encyclopaedias face difficulties of this sort; undoubtedly the Encyclopaedia of the Negro, like the Encyclopaedia of the Social Sciences, would have an unusual task in these respects; but we firmly believe that the work could be accomplished with a large measure of success, if the difficulties are frankly faced and the whole work done with a broad spirit of tolerance and wide reliance upon the best scholarship of the day.

47-12-128

While many people would desire an Encyclopaedia of the Negro and would recognize as valid most of the foregoing arguments, yet because the Negro problem is still in such a controversial stage, not only in the United States, but in South Africa and in other places, they would naturally fear that such a work might prove to be a passionate and over-emphasized defense of the Negro; or, on the other hand, a series of articles which, in the endeavor to avoid controversy or personal sensibilities would succeed in saying nothing of real value or enlightenment.

We who are advocating the Encyclopaedia of the Negro recognize these pitfalls clearly and for that very reason are determined to avoid them. The Encyclopaedia will not be designed to "make a case" by neglecting or deriding views merely because they are derogatory; or adopting views that are pleasant or encouraging merely to please. After all the Negro himself would be the chief loser from an encyclopaedia which did not gain the respect of the world of scholarship; and the Negro's interests would be best served by a work so fair, so objective and so thorough that it would be accepted everywhere and for many years to come as the most authoritative source of information.

On the other hand, where there are controversial subjects and where science has spoken no final word, an encyclopaedia should present a fair statement of the present position of the controversy. All encyclopaedias face difficulties of this sort; undoubtedly the Encyclopaedia of the Negro, like the Encyclopaedia of the Social Sciences, would have an unusual task in these respects; but we firmly believe that the work could be accomplished with a large measure of success, if the difficulties are frankly faced and the whole work done with a broad spirit of tolerance and wide reliance upon the best scholarship of the day.

47-12-129

Reason for an Encyclopaedia of the Negro

What are the reasons for editing and publishing an Encyclopaedia of the Negro? Many persons are doubtful of the present need of such an encyclopaedia. They say that it would increase the sense of racial distinctions rather than lead men to forget them; that it would tend to boasting and over-emphasis on group accomplishment; and that above all, there is not yet a sufficient basis of well-ascertained fact for such an encyclopaedia.

In answer to these suggestions it may be pointed out that in the minds of large numbers of persons, the Negro race today is already set apart as a different and almost sub-human group; that this attitude can be met not by silence but only by setting forth the facts and letting the world know that the essential humanity of the black race is today well attested by facts and authoritative opinion.

Many persons who are aware of this, do not realize how widespread is the ignorance of these facts and their open and confident denial of these facts. Singularly unfortunate and misleading statements appear generally in school text books and even in well-known college text books: the book on CONTEMPORARY SOCIOLOGICAL THEORIES written by the first professor of sociology ever appointed at Harvard University says of Negroes "In Africa they had as many chances in the long course of history to create complex forms of culture as the white race had elsewhere and yet nothing has been created." (p. 298) "Excepting, perhaps, a few heavyweight champions and eminent singers, the American Negroes have not up to this time produced a

417-12-130

single genius of great caliber." (p. 298) "It is worthy of notice that the studies of Ferguson, E. B. Reuter, and of some others, have shown that the greater the infusion of white blood into the Negro, the higher is his intelligence quotient." (p. 297)

A widely read American author says concerning the Civil War "The American Negroes are the only people in the history of the world, so far as I know, that ever became free without any effort of their own." (Woodard, MEET GENERAL GRANT)

Beside direct statement of this sort there is continued implication and innuendo. When the communist leader of China reminded Edgar Snow of the treatment of Negroes and American Indians "I pointed out certain great differences in the historical and psychological background of the Negro in America and that of the minor races of Russia." (Edgar Snow, RED STAR OVER CHINA, p. 71)

In a current popular magazine article, Morrison Holliday writes "The black man in the South, 90 per cent of him, at least, belongs to a primitive race barely removed from savagery."

The thirteenth edition of the Encyclopaedia Britannica in its article on anthropology pointed out that the sutures in the heads of Negro children solidify early so that mental development in the race is impossible. The fourteenth edition printed the assertion of a Harvard professor that "colored" members of Southern legislatures during Reconstruction engaged in a "saturnalia of corrupt expenditure." A governor of the African colony of Kenya testified before a Parliament committee with regard to the land question "The African, of course, has no views at all." Current opinion on West Africa would be

417.13-131

astonished to read the resolutions of the Congress of West Africa of 1916.

It is with difficulty that one finds maps of ancient and medieval Africa or allusions to African customs or social life or art save as jokes. Seldom is any distinguished man of Negro blood alluded to or his race mentioned save disparagingly.

There is almost inextricable confusion as to what the word "Negro" means; as to whether Ethiopia was a civilization of black men; as to whether there are any evidences whatsoever of culture and art in Africa. In the recent renewed discussion of race, due to the plight of the Jews in Germany, one notices repeated tendencies to except the Negro race from general statements concerning essential racial equality.

In most cases the persons who make these statements or omit allusions are not motivated by any distinct enmity toward the Negro race or any conscious prejudice. They simply have not themselves carefully studied the situation; their education, formal and social, brought no intimation of anything worth knowing about Negroes; and they cannot, if challenged, easily find authoritative references to which they can turn for information. In the case of the average reader, even when intelligent, or of students in universities, the situation is even more baffling. There is hardly an ordinary question concerning Negroes from discussion of race to a definition of a Negro, a history of African slavery or of present conditions in Africa, to which persons can easily find a clear and intelligent answer upon which they may depend. On the contrary there is hardly a statement made, however extreme, that he may not see advocated or defended by books published by reputable companies and written by well-known authors.

47-12-132

On the other hand our knowledge of the Negro especially in the twentieth century has been greatly increased. Careful studies of the history of the Negro race in Africa and America have multiplied. Investigation in ethnography and anthropology, in ethics and sociology has been made until today there is a fairly well-rounded body of source material and monograph which can give a pretty complete picture of the past and present of the Negro race. But even the intelligent student who is in general aware of this would be hard put to put his hand on authoritative material or to refer to good bibliographies. Public libraries would not generally carry or catalogue such matter and general literature would seldom refer to it.

Our knowledge of the Negro and Africa is not, of course, complete; there are many gaps where further information and more careful study is needed; but this is the case in almost every branch of study. Knowledge is never complete and in few subjects does a time arrive when an encyclopaedia of its knowledge is demanded because no further important information is expected. Indeed the need of an encyclopaedia is greatest when for the sake of further advance and further study there is a distinct need to standardize present knowledge and bring together and set down as a new starting point a clear and orderly statement of what is already known and agreed upon.

Ordinarily such need for accumulating and making definite a body of knowledge would automatically make itself felt. But in some cases and particularly in that of the Negro, there is a certain initial difficulty of prejudice to overcome: why, men ask frankly and honestly, is it necessary to study the Negro? "Africa has no history" as a French professor of Political Economy recently wrote (Guernier, L'AFRIQUE, p. 55). Cannot funds and effort be spent to better account?

47-12-133

There was something of the same prejudice and hesitation when the Jewish Encyclopedia and the Catholic Encyclopedia were planned. The editors of the Jewish Encyclopedia said frankly "Hitherto the difficulties in the way of such an adequate and impartial presentation have been insuperable. Deep-rooted prejudices have prevented any sympathetic interest in Judaism on the part of Christian theologians, or in Christianity on the part of the rabbis." They admitted that there was much yet to be known, much investigation still to be made: "The investigation of the sociological conditions and the anthropology of the Jewish people is even now only in its initial stages. In all directions, the facts of Jewish theology, history, life, and literature remain in a large measure hidden from the world, even from Jews themselves." (Jewish Encyclopedia, Vol. 1, p. viii) But nevertheless they insisted upon the necessity for "a serious attempt . . . to systematize and render generally accessible the knowledge thus far obtained." (Jewish Encyclopedia, Vol. 1, p. ix)

The Catholics complained that in the case of many matters in which Catholics were interested "proper answers to the questions proposed are not to be met with in English literature. Even the writings of the intentioned authors are at times disfigured by serious errors on Catholic subjects, which are for the most part due, not to ill-will, but to lack of knowledge."

Both sets of editors recognized the essential difficulty of carrying out an enterprise of this sort: the Jews said "The editors have felt a special sense of responsibility with regard to this work, in which for the first time the claims to recognition of a whole race and its ancient religion are put forth in a form approaching completeness. They had to consider susceptibilities

47-12-134

among Jews and others, and have been especially solicitous that nothing should be set down which could hurt the feelings of the most sensitive." (Jewish Encyclopedia, p. xxi) Yet they proposed to edit such an encyclopaedia "With an exhaustiveness which has never been attempted before - without concealing facts or resorting to apology." (Jewish Encyclopedia, Vol. 1, p. xxi)

And the Catholic editors were sure that even "among Protestants the desire for a more intimate and accurate knowledge of things Catholic increases in proportion to the growth of the Church in numbers and in importance."

There is, of course a parallel argument and one in some respects even more forceful, for an attempt today to use the best scholarship of the world in placing before average, intelligent citizens of the world, a carefully considered statement concerning the past and present of the Negro race. It may be said that nothing in the long run would serve better to replace prejudice, indifference and bitter memories, with scientific fact and balanced judgment.

47-12-135

Atlanta, Georgia
January 13, 1939

GUIDE TO PROPOSED SUPPLEMENTARY LIST OF TOPICS AND TITLES

I. Cultures of Stone Age Africa:

(Note: A score or more of more or less distinct cultural periods - e.g. for East Africa - Kafuan, Oldowayan, Chellean, - Acheulean, Sangoan, Levalloisian, Kanyukian, Aurignacian, Stillbay, Magosian, Elmentetitan Wilton, etc., etc., - have been distinguished. Would these be treated individually or in a single article with titles in proper place and cross-references added? Should a bibliography be included and, if so, how extensive?

II. Men of Stone Age Africa.

In addition to "Broken Hill Man", which is already listed, there are about twelve or fifteen additional specimens which are about as important as the Broken Hill find. Should these be listed? Should bibliography be included?

III Christian Kingdoms (of Medieval Ethiopia)

1. Axum (or Aksum)
2. Dongola
3. Alwa

Would these be treated individually, or as a group, or under the general topic "Ethiopia"?

IV. Patriarchs of Abunas of the Abyssinian Church.

(Since my original list of topics was sent you I have collected a complete, or nearly so, roster of the above. Some of these would be, in my opinion, worthy of individual treatment. Shall I include some or all of these?

V. Kings of Melle (or Mali)

Most of these were included in my original list, but, since then, several new names have been acquired. Should the article "Melle" include a chronological list of the kings, these new names could be added.

VI. Kings of Bornu (or Kanem-Bornu).

(In my original list only a few of these were included. I now have a rather full roster of these - including both the Sefuwa-Duguwa-Hume Dynasty - 9th century A. D. to 1846; the Kanemiyin Dynasty - 1846 - 1900 and the Bulala Dynasty - 1365 - 1922 A. D. Certain of the rulers of each of these dynasties were great characters, and would merit, in my opinion, individual treatment.

VII. Typical of some other suggested additions

1. Ashanti
2. Caillaud, Frederic - "the father of Ethiopian Archaeology"
3. Candace - title of ancient Ethiopian queens of queen-mothers
4. Christianity in Medieval Ethiopia - title with cross-reference to appropriate article.
5. Islam in Negro Africa - same as above
6. Negroes in Ancient Egypt - same as above
7. Jesuits in Ethiopia - same as above
8. Ahmed Baba - merits individual treatment

* Perhaps better as a separate article; a question which, in my opinion has never been adequately treated.

47-12-241

9. Rattray, R. S. - one of most eminent of recent European students of contemporary African Cultures; approach and findings mark an epoch in approach to study of African societies. Findings and point of view worthy of special article.

10. Leakey, L. S. B. leading European student of African pre-history; has done more than any other to systematize knowledge in this field; merits, in my opinion, special article.

11. Ghana - bibliography may be expanded.

12. Melle - " " " "

13. Songhay - " " " "

14. Hausa - " " " "

15. "Prester John" " " "

16. Bornu " " " "

17. Meroe - listed in prospectus as "ancient African kingdom". Strictly speaking, Meroe was the Greek name of the principal capital of Ethiopia in Classical times, though it is true that by a modern extension the name is sometimes used as a designation of the kingdom of which it was the capital. If, however, "Meroe" is given special treatment apart from "Ethiopia", Meroe's great contemporary and sister city "Napata" (also sometimes called, by extension, the "Kingdom of Napata") might also be made the subject of a special article.

18. The "C-group Culture" - name applied by Reisner to a rather unique and important culture which flourished in the Nubian Nile Valley from about 2500 to about 1500 B.C. Revealed by the great archaeological surveys of Nubia and the excavations of Junker, Steindorff and Griffith between 1907 and 1934. Could be treated, if article is inclusive enough, under the general title "Ethiopia" but if so, title should be listed in proper place with cross-reference. Culture is important enough, however, to merit distinctive treatment.

19. The Kerma Civilization - the most important and highly developed of all early Ethiopian Cultures. Flourished about the same time as the C-group Culture and have certain resemblances to it but was of a higher order; discovered at Kerma in Upper Nubia and site excavated by Harvard-Boston Expedition between 1915 and 1917. One cemetery alone covered over 800 acres. Reisner endeavored to interpret it as an importation from Egypt but Junker and others, including my own studies, have shown Reisner's views to be ill-founded. Because of im-

47-12-242

portance of culture and academic controversies bearing upon its origin, I would recommend that culture be treated in special article.

20. Under the titles "Negro" or "Race", or under some other appropriate title, I would recommend that there should be given systematic and exhaustive treatment of the problems of race-classification with special emphasis on difficultires and uncertainties involved in the attempts to determine "what is a "Negro". It is my opinion that the methodological difficulties, as well as the phylogenetic and historical ramifications and implications of the problem should be stressed. Concrete instances drawn from prehistoric and ancient finds - (for example, ancient Nubian skulls showing no "Negro" or "Negroid" characters in their bonny parts, but clothed with wooly hair; - and, wide-nosed and prognathous skeletons from prehistoric sites in Europe (See illustrations enclosed) and Asia) - as well as from modern clinical and laboratory observations, (e.g., instance where specimens are known to represent crosses between full blooded "Negro" and "Nordic" parents, but with the type - characters of one of the parents completely recessive - i.e., absent) - should be given. Although a certain amount of technical matter would have to be mentioned in such an article, I believe it could be so presented that the import of the discussion could be easily understood by any lay-reader. Such a discussion would do much to clear up much of the confusion (or at least would make more intelligible the problem) which has done so much to confound many of the learned and the laity who have striven to grapple with or to understand the intricacies of race-classification.

47-12-243

A LIST OF

TWO THOUSAND AND EIGHTY-ONE SUBJECTS

WHICH MIGHT BE TREATED BY AN

ENCYCLOPAEDIA OF THE NEGRO

selected by

W. E. B. Du Bois

April 1, 1940

41-12E-2

FOREWARD

In 1936 and 1937, I prepared two lists of proposed subjects for an Encyclopadia of the Negro. This was revised again by Dr. Rayford Logan and myself in 1938. In 1939, Dr. Guy Johnson and his wife made a supplementary list of some two thousand entries. From all these efforts I have made the present selection and combination.

The following proposed subjects for an Encyclopaedia of the Negro are by no means intended to be definitive. They are merely a last series of suggestions. They contain one thousand and twenty main topics indicated by capital letter and one thousand and sixty-one subsidiary subjects which it is suggested are to be distributed among and included under the main subjects.

Here immediately there can be endless difference of opinion; some will think this or that subsidiary subject ought to be main topics, and that some of the main topics should be included under general entries. It must be remembered that this is but the opinion of one person, helped with suggestions of a few others. It is subject to wide change according to the judgment of a competent editorial board. Naturally, no one person can be expert on the multitudinous subjects here included.

There is especially a grave question as to whether all the subjects or even most of them can be treated adequately without a division of the body of the work into sections dealing separately with Africa, the United States, the West Indies and South America. I had thought to supplement this list by another made in accordance with such geographical sections, but I doubt if this would be worth the time at pr - sent.

There are a great many obvious omissions, some of which are deliberate. I have included, for instance, only a few of the names of the great explorers. I think they should be all comprehended in a general article under the exploration of Africa. In the same way I have tried to avoid the more or less unconscious assumption of so many persons that the history of white folk in Africa is the history of the Africans. For this reason the names of many administrators and of students of Africa have not been included. In the case of the latter, however a list of those students who have made the greatest contributions to our knowledge of Africa is being compiled separately. I am also making a revised estimate of the division of space in the four proposed volumes which these subjects may be planned to occupy.

Finally, let me repeat that the object of this compilation is simply to emphasize the fact that the subjects which an Encyclopaedia of the Negro may treat are many and interesting in number, and of vital importance to the understanding of the modern world.

RACE PROBLEMS

I. Race character, organization and relations.

II. Specific races and regions.

III. Supplement: articles treating race problems in a major subdivision or incidentally.

(This collocation of topics is a means of insuring completeness and a proper proportion of space in the articles that fall under the general heading mentioned. In its final form, of course, the Encyclopaedia will be arranged alphabetically, without division. Some topics mentioned here will be treated also from other points of view than that of the racial problem involved, which explains what may seem in these instances an undue allotment of space. The numerals indicate the number of words tentatively assigned. Texts have been appended to the more general titles to indicate the proposed main content of such articles.)

42-S-253

RACE PROBLEMS

I

Race character, organization and relations

Amalgamation: 1500

Biological amalgamation of racial groups; distinction from assimilation and the narrower meaning of miscegenation.

Anthropogeography: See Human Geography

Anthropometry: 1000

The development of measurement of physical characteristics and its importance in anthropology.

Aryans 1000

An account of the Aryan theory since 1786; its effects; criticism of the doctrine from the anthropological viewpoint.

Biometry See Anthropometry

Ethnic Communities 2500

Communities or communal subgroups organized on racial lines. Ghetto, immigrant communities urban and rural. Racial and cultural relations with surrounding communities.

Eugenics 3000

Theoretical bases of eugenics and its application to social problems. Practical programs and their opponents.

Heredity 3000

History and criticism of theories of heredity. The bearings of heredity on economic and social problems. Heredity and race theories and relations.

Human Geography 3000

Geography and the diffusion of human stocks and cultures. Trade routes, the shifting of population centers, the effect on institutional life, etc.

Inbreeding See Race. Heredity. Eugenics

Interracial Councils 1000

Forms of conscious social organization for the peaceful and scientific solution of problems of race contact.

Man 3000

A study of the species, man; his characteristics, antiquity; general mention of differentiation; geographic distribution of man; his social evolution; his importance in the natural order.

Mendelianism See Heredity

652-5-54

Miscegenation 1500

History and application of the concept; comparative study of its force in contemporary societies. Criticism of the concept.

Native Policy 4000

The general lines of treatment of natives in colonial or backward countries with special reference to policies concerned with social relations between racial groups and individual members of them.

Race 10,000

The origin and development of the concept of race; its earlier uses; modern concern with the problem. History and critical evaluation of theories of race differentiation, race character, etc. Recent trends of theory.

Race Character See Race

Race Consciousness See Racialism

Race Degeneration See Degeneracy

Race Equality See Race Prejudice; Race

Race Inferiority See Race Prejudice; Race

Race Mixture 4000

The process of race mixture. Theory of its effects. Criticism of the theory. Social problems involved in the process.

Race Purity See Race; Race Prejudice; Miscegenation; Race Mixture

Race Riots 1500

The causes and course of race riots. The attitude of government.

Race Psychology See Race

Race Prejudice 4000

Causes, content and validity of race prejudice. Its effects. Efforts to control.

Race Superiority See Race Prejudice; Race

Race Solidarity See Racialism

Racial Communities See Ethnic Communities

Racialism 2000

Manifestations of racial solidarity, especially among members of racial minority groups. Theoretical formulation of race consciousness and its expression in organization and endeavor.

[Encyclopaedia of the Negro]
Eve of the negro
Sources of Materials

Suggested Topics with Reference to the Negro in Brazil

(Together with names of individuals who might be induced to prepare articles)

1. Source materials for the study of (historical) - Gilberto Freyre, Pernambuco, author Casa Grande e Senzala and Sobrados e Mucambos, (studied with Shepherd and Boas).

2. Procedencia - Braz do Amaral, Bahia, historian, author O Grande Mercado dos Escravos Africanos.

3. Slave Traffic - J. F. de Almeida Prado, São Paulo, interested in source material on world traffic in slaves; Lawrence F. Hill, Ohio State, author "The Abolition of the African Slave Trade to Brazil."

4. Dispersion (in Brazil) - Oliveira Vianna, Rio, author Evolução do Povo Brasileiro.

5. Slavery (sugar areas, diamond mines, cattle country, coffee fazendas, Negros de ganho of the cities) - Percy Martin, Stanford University, historian specializing in Latin American history with particular attention to Brazil; Mary W. Williams, Goucher College, similar interest; Herbert S. Alexander; Rüdiger Bilden, Fisk; Gilberto Freyre.

6. Fugitive slaves (quilombos, or settlements of fugitive slaves; Palmares, most famous settlement, endured 60 years, successfully resisted government arms over long period of time; capitão de matto, or professional hunter of fugitive slaves; Zumbis, famous quilombo leaders) - (see 5).

7. Slave insurrections (especially the Malê revolt in Bahia, 1835) - Braz do Amaral.

8. Manumission - (see 5).

9. Abolition movement - Percy Martin; Evaristo de Moraes, Rio, author A Escravidão no Brasil.

10. Miscegenation - Gilberto Freyre

11. The Mulatto (rise of) - Gilberto Freyre.

12. African contributions to Brazilian:

    a. Language - Renato Mendonça, Rio, author A Influencia Africana na Lingua Portuguesa; Jacques Raymundo, Rio, author O Elemento Afro-Negro na Lingua Portuguesa.

40-7J-1

b. Music (samba, etc.) - Mario de Andrade, São Paulo, music critic, interested especially in folk-music.

c. Cuisine - Gilberto Freyre

d. Disease - Octavio de Freitas, Rio, author As Doenças Africanas no Brasil.

13. The fetish cult (in Brazil) - Arthur Ramos, Rio, disciple of Nina Rodrigues, author O Negro Brasileiro, As Culturas Negras no Novo Mundo, and O Folk-lore Negro no Brasil; Frei Thomaz, Bahia, perhaps best informed student of the fetish cult in Brazil; Edison Carneiro, author Religiões Negras.

40-7J-2

14. Black Saints (São Benedito, Santa Efigenia) - Gilberto Freyre

15. Negro Heros (Henrique Dias, Luiz Gama, José do Patrocinio) -(see 5).

16. Crime and the Negro - João Mendonça, Bahia, official State Penetentiary and student of criminology.

17. Mental Disease and the Negro - Ulysses Pernambucano, Recife, author various monographs on subject.

18. The ama (slave nurse) - (see 5).

19. Castro Alves ("poet of the slaves") - João da Silva Campos, Bahia, author "Costumes dos Africanos na Bahia."

20. The Maracatus (Negro carnival organization, Recife) Mario Sette, Recife, author Maxambombas e Maracatus.

21. The cordões (Negro carnival organization, Bahia) Edison Carneiro.

22. The Balangandans (famed ornaments worn by Negro females at Bahia, ordinarily presents from white masters) - Pedro Calmon, Rio and Bahia, author A Historia Social do Brasil.

23. The Bahiana (famed Negro female type at Bahia, tall, well-built, dressed folk-costume) - Arthur Ramos; Gilberto Freyre.

24. The Morena (ideal type of female beauty; often, especially in Bahia, possesses Negro blood) - Gilberto Freyre.

25. Contribution of Negroes and Mixed-bloods to Brazilian Literature - Jorge Amado, Rio, novelist, particularly interested in portraying Negro life; José Lins do Rego, Rio, similar interest.

Add'l 137

A PROPOSED PLAN FOR COOPERATION BETWEEN THE ENCYCLOPAEDIA OF THE NEGRO AND THE WPA WRITERS' PROJECT

The Encyclopaedia of the Negro is in charge of a board of directors incorporated in the District of Columbia, May 10, 1932. This board has among other things assembled a list of two thousand possible subjects which an Encyclopaedia of the Negro might treat and a bibliography of all books and articles on the Negro from 1926 to 1936. Work's bibliography supplies the period before 1926.

46-5-109

I suggest that the Encyclopaedia appoint a board of consulting editors who should be at the service of the WPA in suggesting subjects and sources and in helping in the criticism of manuscripts. I suggest that all manuscripts prepared by the workers in the WPA be submitted, before their final form, to the criticism of this editorial board. I suggest that finally the manuscripts be brought together in one place, for instance, in the now unused Carnegie Library building of Atlanta University, either in published form or in manuscript.

It would be permissable, of course, for any manuscript to be published as a WPA enterprise. It would be possible to publish individual manuscripts in periodicals like PHYLON.

It would be the final plan to have the full board of editors of the Encyclopaedia of the Negro whenever the enterprise receives proper support to use the WPA material published and unpublished as the basis of its final articles. It being understood that if an article is used unchanged the WPA and the author will receive full credit. If it is used as a basis of a re-written article the WPA and the author would receive credit as source material.

10 March 1941

- Memo for Dr. Du Bois
as Librarian

(1) The Catholic Univ. Library (D.C.)
is very strong in Latin Americana
and has the best collection of
books regarding Brazil in the
United States (over 20 000)

(2) The Pan-American Library
also has valuable material.

(3) Several of the missionary
libraries are very strong on Africa, eg

Day Missionary Library, Yale Univ.
Hartford Theol Sem", Hartford.
United Missionary Library in
N.Y. City (I have not exact name)

Eve of the Negro

The Most Important Collections of Material Concerning the Negro in the United States and Abroad

1. Special collections in North American libraries taken from the file of the Library of Congress:

Negro authors.
Louisville Free Public Library, Louisville, Kentucky

Negro literature.
Boston Public Library, Boston, Massachusetts

New York Public Library, New York, N. Y. (Material listed in Locke, Alain L., "Plays of Negro Life in N. Y. P. L.) Also Arthur Alfonso Schomberg's, "A bibliographical check-list of American Negro Poetry. N. Y., 1916."

Negro race.
New York Public Library. Schomberg collection. . . 4,000 v., and pm., much manuscript material and prints. (Items written by or about Negroes. . . covers not only Africa and this country, but foreign books in many languages.)

Negroes.
Howard University Library, Washington, D. C. 6,000 v., 3,000 pm., and 300 v. periodicals. Moorland Foundation. Also includes Lewis Tappan. Francis Grimke collections.

U. S. Library of Congress. (Card catalog about 2,080 titles)

Morgan College Library, Baltimore, Maryland.

Fisk University, Nashville, Tennessee. 1,500 v. (emphasis on the slavery, biography, literature and customs of Negroes in various parts of the world.)

Y. M. C. A. Graduate School, Nashville, Tennessee, 4,000 v.

Hampton Normal and Agricultural Institute, Hampton, Va. 3,060 v., 1,224 pm.

University of Virginia, University, Virginia. 400 items, James collection.

Negroes - Colonization.
New York Public Library

Negroes - Education.
General Education Board, 61 Broadway, New York City. 3,500 v. and pms.

Negroes in Africa
Fisk University Library, Nashville, Tennessee. (Specializes in works on the Negro outside the U. S.)

Slavery.
Watkinson Library, Hartford, Connecticut
Howard University Library, Washington, D. C. Moorland foundation.
U. S. Library of Congress (card catalog about 3,900 titles)
Newberry Library, Chicago, Illinois, 3,500 v. and bound pms.

ADB/mjl

Slavery (continued)

Johns Hopkins University, Baltimore, Maryland. 1,000 v., and pms. Birney collection.

Boston Public Library, Boston, Massachusetts. (Has William Lloyd Garrison letters . . .) Also Parker collection of Anti-slavery literature.

Brookline public library, Brookline, Massachusetts

Harvard University Library, Cambridge, Massachusetts. More than 3,300 titles . . .

American Antiquarian Society, Worcester, Massachusetts

Drew University Library, Madison, New Jersey. 451 v., 1,500 pms.

Brooklyn Public Library, Brooklyn, New York

Cornell University, Ithaca, N. Y. 1,396 v., 3,000 pms. May collection.

New York Historical Society, New York, N. Y. 1,000 books and pms.

New York Public Library

Oberlin College Library, Oberlin, Ohio 1,700 v. including William Goddell collection

Western Reserve Historical Society, Cleveland, Ohio

Geneva College Library, Beaver Falls, Pennsylvania, Anti-slavery collection.

Pennsylvania Historical Society Library, Philadelphia, Pennsylvania

University of Pennsylvania, Philadelphia, Pa. Purvis collection of anti-slavery.

Providence Public Library, Providence, R. I. Caleb Fiske Harris Collection of slavery and Civil War was 9,300 items in 1884. Added to . . .

Houston Public Library, Houston, Texas

Wisconsin State Historical Society, Madison, Wisconsin

2. Additions noted by the Division of Bibliography of the Library of Congress:

Chester, Pennsylvania
Bucknell Library. Crozer Theological Seminary. (52,000 v.) Negroes.

Chicago, Illinois
Chicago Public Library. George Cleveland Hall Branch
48th Street and Michigan Avenue
A special collection of 250 vols. on the literature and history of the Negro race in America. For reference use only.

Julius Rosenwald Fund - 4901 Ellis Avenue. (1,500 v.)
Special collections on books on the Negro, and costs of medical care.

HOB/1J/2

New York City
American Association for Adult Education - 60 East 42 Street
(400 v. 2,000 pms.)
Negro adult education

Methodist Episcopal Board of Foreign Missions - 150 Fifth Avenue
(2,337 vols.)
Negroes and Race relations

Philadelphia, Pennsylvania
Armstrong Association of Philadelphia - 1434 Lombard Street
(400 v. 800 pms.)
Important subjects: biographies and autobiographies of famous Negroes; Surveys of Negro achievements in various fields; Studies of Negro life in urban and rural communities; Negro fiction, poetry, folk-lore, music, art and sculpture; Social problems; other data on Negroes. Special collections: Census reports, Negro in Africa and Haiti; Negro slavery; Abolition movement and the Under-ground railroad; Reconstruction period.

Philadelphia Health Council and Tuberculosis Committee - Room 501, Social Service Building
311 South Juniper Street
Negro health

List of recent references on the Negro, with special reference to economic and industrial conditions compiled September, 1935

3. List of libraries with Negro material furnished by Monroe N. Work, editor of the Negro Year Book:

There are four major library centers in the United States which contain a very large percentage of the best books, manuscripts, etc., in this country on the Negro in Africa and America. These centers are:

1. Washington, with its many libraries, important among which are:
   a. The Library of Congress - 4,600,000 volumes
   b. The Smithsonian Institution Library - 800,000 volumes
   c. The Army Medical Library, Surgeon General Office, War Department 900,000 volumes. (On all phases of health of the Negro in America and Africa)

2. New York City, with its many libraries, important among which are:
   a. The New York Public Library, including the 135th Street Branch, 3,700,000 volumes
   b. Columbia University Library - 1,400,000 volumes
   c. Historical Society Library - 150,000 volumes
   d. American Museum of Natural History - 112,000 volumes

3. Boston
   a. Public Library - 1,650,000 volumes
   b. State Library of Massachusetts - 538,000 volumes
   c. Athenaeum Library - 325,000 volumes
   d. Massachusetts Historical Society Library - 250,000 volumes
   e. Harvard University Library - 3,475,000 volumes

HDB/IV/3

4. Chicago
   a. Public Library - 1,628,000 volumes
   b. John Crerar Library - 560,000 volumes
   c. Newberry Library - 495,000 volumes
   d. Historical Society Library - 65,000 volumes
   e. Field Museum of Natural History Library - 95,000 volumes
   f. University of Chicago Library - 1,050,000 volumes.

"I found in the four Library centers mentioned above, more than 80 per cent of the books, included in my Bibliography of the Negro in Africa and America."

4. From Vernon Loggins "The Negro Author" page 408:

The Schomburg Collection of the New York Public Library, probably the most complete existing assembly of books by and about the Negro. Other libraries are either named in full or designated by the following abbreviations: AAS (American Antiquarian Society); BA (Boston Athenaeum); BPL (Boston Public Library); CHS (Connecticut Historical Society); COl U (Columbia University); Cor U (Cornell University); LoC (Library of Congress); MHS (Massachusetts Historical Society); MdHs (Maryland Historical Society); NYHS (New York Historical Society); NYPL (New York Public Library); PHS (Pennsylvania Historical Society); UTS (Union Theological Seminary); and YU (Yale University).

5. The Andrew D. White collection on the French Revolution and Santo Domingue at Cornell University

6. The John G. White Collection of Folklore and Orientalia of this Library (Cleveland Public) contains a large collection of books on Africa, not only its folk-lore, but also its ethnology and ancient history. There are several hundred volumes on African languages. Mr. Gordon W. Thayer, Librarian of the John G. White Collection, regrets that there is no complete bibliography of this material, but we believe you will be interested to know of its existence, and shall be happy to have you examine it and to be of help in any way in our power.

Miss May Klipple, Ball Teachers College, Muncie, Indiana, is compiling a bibliography of African folk-lore, which Mr. Thayer believes, from specimens submitted, will be quite comprehensive.

7. Rare manuscripts and other source material on the Negro Pioneers of California at the Henry E. Huntington Library, San Marino, California. Much of this has not been catalogued.

8. An outstanding collection of books and pamphlets about the Negro. I have been told it is one of the two or three finest in the United States. (Hampton Institute) There are in the collection several hundred books not listed in Work's Bibliography of the Negro. Mr. Arthur Schomburg examined the collection a year or so ago and spoke of it as especially rich in Americana. There are also many early books about Africa. The collection is housed in a special room planned for the purpose.

President Howe has suggested that I write you that the Record Office at Hampton Institute has very valuable historical material consisting of the letters of early graduates.

408/11/15

9. The collection of the late Ulrich B. Phillips, Professor of American History at Yale composed of both pamphlets and newspapers dealing with the economic history of the South, slavery, and secession. In addition there were a number of photostats, transcripts, and manuscripts, as well as many original letters of public interest. The latter included letters by such men of national importance as Edward Everett, Thomas H. Benton, James Monroe, Lewis Cass, etc. Many of the pamphlets could not be obtained without difficulty in the market at the present time. Among the important newspaper files included were runs of the Charleston Mercury, Charleston News and Courier, Richmond Examiner, The New England Galaxy, Boston Independent Chronicle (from 1777 to 1801), Massachusetts Gazette or Boston Weekly News Letter (1772, 1773, 1774). Papers dated between 1760 and 1770 in this collection numbered ninety, those between 1770 and 1781 numbered one hundred and one. The Boston Evening Transcript for the years 1846 through 1896, except those between 1850 and 1856, was purchased from the University of Chicago, bound.

10. Atlanta University Library Collection: General Negro material and special collection of manuscript material concerning John Brown and ~~Granville Sharp~~ Thomas Clarkson.

11. Library of the University of Western Ontario, London, Canada
I think I would be correct in saying that there is more such material in the library of this university and in my own possession than anywhere else in Canada. This would include much material on the Negro in Canada.

12. List of all masters' and doctors' theses on the subject of the Negro from 1931-1937 are published in the Journal of Negro Education annually in the April number.

For masters' and doctors' theses before 1931:
As the author of the articles in the Journal of Negro Education entitled, "The Negro as a Subject of University Research", I have for sometime been interested in the project that you refer to. The Department of the Interior's recently launched "Projects in Research in Universities", are now being considered by our research department, and if we receive funds for conducting such research it is my desire to have collected and edited such lists both from the Library of Congress and the various university libraries. . .. Should the Federal Project not be undertaken, I will at least estimate the cost of compiling such a list from the Library of Congress and inform you of such an estimate. (Ellis O. Knox)

13. In Europe the main collections of Africana are as follows according to Monroe N. Work's Bibliography, page viii:
The British Museum, London; Library of the Royal Colonial Institute, London, Library of the Colonial Office, London; Public Records Office, London; Library of the Colonial Institute, Brussels; Bibliotheque de la Societe Belge de Missions Protestantes au Congo, Brussels; Library of the Colonial Institute, The Hague; Seminar for Oriental Languages (formerly Colonial Institute), Hamburg; Staatsbibliothek, Berlin; Universitatsbibliothek, Berlin; Museen fur Tierkunde und Volkerkunde, Dresden; Library Evangelical Missionary Society, Basel; Libary of the League of Nations, Geneva; Bibliotheque de la Societe des Missions Evangeliques, Paris; Bibliotheque du Ministere des Colonies, Paris; Bibliotheque Publique de l'Agence Generale des Colonies, Paris; Bibliotheque Nationale, Paris.

To these may be added collections in the library of Moscow, Russia; the University of Breslau, Germany; the University of Vienna; and certain collections in Italy, Portugal, and Spain.

14. In the Journal of Negro Education of April, 1936, Volume 5, No. 32, article on "Library Sources for the Study of Negro Life and History": (by Dorothy B. Porter)

The Western Reserve Historical Society, incorporated in 1892 and located in what was once one of the most active anti-slavery centers, contains valuable documents for the study of the slavery argument. The collection of books and pamphlets in this library on the Civil War and Slavery is extensive and ranks among the best in the country on the subject. . . .

The Historical Society of Pennsylvania in Philadelphia has important records for the study of slavery and of the free Negro, especially for the Negro in Pennsylvania. In addition to hundreds of pamphlets, books and clippings on the Negro and related subjects, the library contains the Correspondence and minutes of the Pennsylvania Society for the Promotion of Abolition and Slavery from 1785-1868. Other documents such as the Records of the Friends' Meetings lend valuable aid to the student of research. Among the rarities that may be found there are some of the original broadsides of the poems of Phillis Wheatley. A glance at the bibliography attached in the excellent study of the Negro in Pennsylvania, by Edward R. Turner shows that most of the material used in this study was found in this society.

It has been known for sometime that the New York Historical Society in New York City has both printed and manuscript materials. Much of it is still inaccessible as it has not been catalogued. The catalogued collection should be examined by the worker in the field of Negro history.

The writer, a few years ago while trying to locate imprints written by American Negroes prior to 1835, discovered that the majority of the titles found were in the American Antiquarian Society in Worcester, Massachusetts. Mr. Vail, the Librarian, does not know how many titles there are in the library on the Negro and slavery, but he writes that there are "thousands of them.". . .

At the turn of the century several states established state departments of archives and history or some corresponding department concerned with the custody and care of public archives. Of course the value of the records housed in State and County Archives is obvious. Their interest to the antiquarian is perhaps increased by the fact that these records are very often in manuscript form and are kept in fireproof vaults. The Virginia State Library at Richmond has a valuable manuscript collection of more than 1,500,000 pieces. These are Virginia items, for the most part, dating from colonial times. In addition the library has photostatic copies of original manuscripts of a vast number of church and local records. The collection of the Virginia State Library is probably next to the Library of Congress in size and value. The Civil War material is very extensive, especially that dealing with Virginia and the confederate States. . . .

A similar exploration of the records across the country in the County Archives in California reveals a considerable number of manumission papers issued to Negro slaves down to 1856. . . .

Numerous records of this genre can be found in these offices throughout the country and they are for the most part arranged in excellent order and show evidence of much care in their keeping.

Our National depository, The Library of Congress, in addition to the large collection of books and pamphlets has important manuscript material of great value. . . .

There is to be found in the archives of United States Government in the District of Columbia certain classes of material on the Negro. The Naval War Records Office in the Navy Department contains among other manuscripts fifteen volumes of letters on the African Squadroon. This material is of particular value since it relates to the slave trade in its earlier period. Certain records of Freedmen's Bureau may be found in the Adjutant General's Office in the Department of War. The Patents and Miscellaneous Division in the Department of the Interior has among its materials a valuable and interesting group "comprising the papers relative to the slave trade and to schemes for colonizing Negroes." These papers fill eight boxes and four volumes, between the years 1854 and 1872. The papers relating to the suppression of the slave trade "consist of correspondence with United States marshalls and attorneys, and with the President and members of the Slaver Augusta, 1861-1862, and of miscellaneous correspondence; those relating to the colonization schemes of correspondence with officers of the government, consuls, judges of mixed courts, emigration agents and commissioners, and officers of the American colonization Society."

The Department of State houses in its Bureau of Indexes and Archives documents on slave trade, mixed courts on the coast of Africa, 1862-1870, and "letters asking or in the name of the President directing the employment of vessels for executing such obligation as the suppression of the slave trade and opium traffic." The Department of Justice has letters transmitting "accounts for services arising under the execution of the fugitive slave law in Boston" (July 24, 1857). These archives should prove to be invaluable sources for the study of Negro life and history.

An idea of the various materials in the State and Historical Societies may be seen from an examination of Table I.

Public Libraries

Numerous public libraries throughout the country have made beginnings in the collection of Negro material. In some one or more specific aspects of history these collections are developing distinct values.

The Boston Public Library with its extensive collection of books, pamphlets, letters and manuscript papers on the Negro and slavery provides an invaluable reservoir for studies. The Parker collection was left to the library by the Reverend Theodore Parker, a well-known abolitionist of his day. At the death of Mrs. Parker in 1881, the library received 12,782 volumes and 4,617 pamphlets. In addition, the library contains about 6,000 letters in the Garrison collection; the Weston Papers, 1808-1885 of 3,000 titles; the Child Papers, 1808-1885, of 400 titles; the May Papers, 1834-1870 of about 500 titles; the Phelps Papers of about 3,000 titles, and numerous small collections of letters and papers relating to anti-slavery. The Civil War material in the library covers several thousand volumes.

Moreover, there are a number of rare broadsides in the Boston Public Library relating to the Negro. . . .

The Boston Public Library also has the Hunt Library of 700 volumes, manuscripts and charts relating to the West Indies and Slavery. The collection was bequeathed to the library by Benjamin P. Hunt of Port au Prince in 1877.

The Public Library of Brookline, Massachusetts, in addition to an ordinary collection of books on the subject in question has a valuable set of seventy-seven volumes of the laws of the slave-holding states which were given to the library by a prominent abolitionist, William I. Bowditch.

The Public Library in Cleveland, Ohio, because of its proximity to the Western Reserve Historical Society of Cleveland, does not specialize in material on the Civil War and Reconstruction. It has, of course, the usual materials on the subject that a library of its size would have. The main public library is building up a collection of material on slavery. It is important to know, however, that this library does possess the John Griswold White Collection of Folklore and Orientalia. (See No. 6 of this list) In it there are between four and five hundred books on African languages, including all magazines dealing with this subject. There are seven or eight hundred books with linguistic material in them on Africa. Many Bible translations into African language are in this collection. The books in this collection were given to the library by John C. White of Cleveland before his death or purchased since from his endowment to the White Collection. . . .

The Birmingham Public Library in Alabama, with an endowment of $50,000 for the building up of a collection on Southern History and Literature, has been interested in collecting material on the Negro, Slavery, the Civil War and Reconstruction. Many of the volumes in the library are descriptive of the Ante-Bellum South. In 1927 the library organized a separate Department of Southern History and Literature. At present there are 7,783 catalogued volumes. This fact would seem to indicate that in addition to the total number of 914 volumes classified under Civil War, Reconstruction, the Negro and Slavery there would be found a considerable amount of material on the Negro scattered through the other parts of the collection.

The New York Public Library, in addition to its very splendid collection on the Negro in the 135th Street Branch Library, has in the main library a collection of several thousand letters relating to Pierre Toussaint, the freed Santo Domingo Negro slave, which it received in 1903. The biography printed in 1854 of Toussaint has been long out-of-print. . . .

HOB/Ti/10

On the subject of Africa the library has in addition to old and modern histories, accounts of exploration and travel, a fine section of political and social periodicals, many of the special official reports of nations which have been or are interested in some portion of African territory and a large number of publications of museums and institutions devoted to the study of life and customs of the African peoples. The public documents which relate to Africa form one of the ranking collections in this country.

The Providence Public Libary in Providence, Rhode Island, acquired the Caleb Fiske Harris collection on slavery and the Civil War, of about 9,500 volumes, in 1884. The collection has since been greatly increased. "The collection is especially rich in original documents of the Confederate States, in foreign works on the North and South, in material on slavery in the British and French West Indies and in translations of Uncle Tom's Cabin." Mr. Brantz Mayer of Baltimore collected much of the Southern material. He also gathered the interesting collection of posters offering rewards for runaway slaves. In addition there is a good collection of slave narratives. The Civil War material is rich and contains the George H. Smith Scrapbook collection of 33 folio volumes, 1860-1864; the John Russell Bartlett Scrapbook collection of 60 folio volumes from 1860-1868; the Goddard Scrapbook collection which includes among other things a notable collection of pictorial envelopes used during the Civil War.

Table II indicates the extent of available sources concerning the Negro to be found in Public Libraries.

Collection of Negro Materials in Public Libraries

Name of Library	Subjects Represented	Volumes	Pamphlets
Massachusetts			
Boston Public Library	Negro, Slavery (also letters and MSS papers, 12,900)	12,782	4,617

University and College Libraries

There are many admirable collections on the Negro and related topics to be found in college and university libraries. Two large and important collections on anti-slavery literature are to be found in the Oberlin College Library and Cornell University Library. Oberlin has 1,700 volumes on slavery. Situated in what was once a center of the anti-slavery struggle it is natural that the documents on this subject are preserved there. Many of the slavery items were obtained when a campaign was undertaken at the time of the opening of the Spear Library building in 1885.

Three appeals for gifts to the "Historical Collection on Slavery" were made, with the plea - "We have a very valuable collection and hope to make it complete. We desire to secure a copy of every book, pamphlet, report, bearing upon the subject." As a result William Goodell's splendid collection representing every phase of the anti-slavery movement was secured through his grandson, Professor Frost. It lacks, however, periodicals and pro-slavery material. Other gifts of considerable importance were received. In 1932 there was printed A Classified Catalogue of Anti-Slavery Propaganda in the Oberlin College Library. It was compiled by Geraldine Hubbard as part of a thesis submitted for the degree of Master of Arts. As a classified and annotated list and index it is invaluable to the whole collection.

The Cornell University Library at Ithaca, New York received as a gift the private library of Samuel J. May, an abolitionist, in 1870. Small additions were made later by gifts from R. D. Webb of Dublin and Mrs. E. D. Nichols of Edinburgh. Occasional purchases have increased the collection. The library is also fortunate in possessing the letter books of the Freedmen's Aid Society. These are in manuscript form. There is no printed catalog of the collection. The whole collection has been listed on slips. In 1864 there appeared a printed list of books on slavery compiled by Samuel May. This list was more than likely made from the books in the possession of May. If so, they in all probability formed part of the collection which was presented to Cornell University.

The library at Harvard University in Cambridge, Massachusetts owes its collection of volumes on slavery very largely to Charles Sumner and Thomas Wentworth Higginson. The collection is made up of pamphlets bound together. In addition, there are many books on slavery and there is a representative number of rare items written by free Negroes before 1840. The subject catalogue has about 3,300 titles under slavery. On Africa the Harvard University library has 8,000 volumes. One thousand of these are on North Africa. Its collection of over 600 titles on the Bantu languages is the largest in the United States. This was made possible through the purchase of the Frederick Starr collection relating to the Congo language.

The Library of the University of Texas has a special fund for Southern History, presented by the late Major George W. Littlefield, an ex-confederate soldier of Austin, Texas. The Littlefield Collection was established in 1914, and (as is stated on the bookplates) "for the full and impartial study of the South and its part in American history." The main emphasis has been placed on the period from 1820-1867. This period includes "Southern imprints and any phase of political, industrial, social and literary history of the South". At the present time the card catalogue has approximately 1,000 entries under the subject Negro, 765 for Africa and 2,740 for the Civil War. There is much material that would be pertinent to the general subject Negro that is not brought out under these headings.

The Birney collection gathered by James G. Birney, the abolitionist, and his son General William Birney was presented to Johns Hopkins University in 1891. The collection contained over 1,000 volumes and pamphlets including many rare and early pamphlets. There are minutes of many of the meetings from the first abolition convention of 1790 to 1872; daily abolition newspapers, including the nearest complete set known of Lundy's Genius of Universal Emancipation and an especially rich collection of pamphlets for the political and religious controversies from 1835-1865. In the same year the library received 50,000 pamphlets, unpublished manuscripts, autographed letters, official documents and historical curios on Southern History and the war between the states and pertaining chiefly to the history of Maryland.

At Atlanta, the Emory University Library is building up a collection of Southern history and literature, about one-half of the thousand volumes collected thus far relate to slavery and the Civil War. There are over 500 titles by little known Southern writers. The family of Joel Chandler Harris has deposited the Harris manuscript material in a memorial room at Emory. In addition to the manuscript material there are copies of all of the published volumes of Harris, a file of the "Uncle Remus Magazine", photographs, scrapbooks and other material relating to the author. . . .

In the Southeastern libraries may be found more or less complete files of the Southern Literary Gazette, Southern Review, Southern Quarterly Journal, Sewanee Review, South Atlantic Quarterly, Virginia Quarterly Review.

The data in Table III show that there are valuable materials for the study of the Negro in College and University Libraries.

To be added to:

The Most Important Collections of Material Concerning the Negro in the United States and Abroad

The most important documentary collection in Europe dealing with the Negro is the "Archives of the Indies" which, before the present Spanish Civil War, were in the cities of Simancas, Madrid, and Seville. Some of these have been calendared, notably in the "Hispanic American Historical Review", III, 292-332 and IV, 559; and in Roscoe R. Hill, "Descriptive Catalogue of the Documents Relating to the History of the United States in the Papeles Procedentes de Cuba." These compilations will greatly facilitate the search for documents pertaining to the Negro.

For slavery in the French colonies one should consult series Lk9 and Lk12 in the Bibliotheque Nationale, Paris, and DXXV56 and DXXV110 in the Archives Nationales. The very valuable Cahiers de doleances de la colonie de Saint-Domingue were published for the first time in 1933. I have a copy.

Herbert C. Bell and David W. Parker have compiled a "Guide to British West Indian Archive Materials in London and the Islands for the History of the United States". M. S. Giuseppi has described the contents of the British Public Record Office in his "Guide to the Manuscripts Preserved in the British Record Office. The most important is that dealing with the slave trade - Series F. O. 84. There has also been published a "List of Colonial Office Records, Preserved in the Public Record Office", supplemented by the "Catalogue of Additions to the Manuscripts in the British Museum". Richard Pares has described the "Public Records in British West India Islands" in the Institute of Historical Research Bulletin, VII (February, 1930), 149-157. Norman Fee has prepared a "Catalogue of Pamphlets, Journals and Reports in the Public Archives of Canada, 1611-1867.

In Portugal the present national archives, the counterpart of the British Record Office, are described by Azevedo and Baiao in "O Archivo da Torre do Tombo."

Mexico began in 1930 an analysis of her archives in the "Boletin del Archivo General de la Nacion". Senor Rafael Heliodoro Valle will aid us in this.

For Argentina the "Boletin del Instituto de Investigaciones Historicas" has been publishing indexes to the archives.

In Brazil the "Publicacoes do Archivo Nacional, XIII, 5-124, gives a general indication of the materials in the national archives.

Vergaray Velasco has indexed the national archives of Colombia in "Republica de Colombia,"indice analitico, metodico y descriptivo which covers only the period 1544-1819.

There is a short appraisal, but no catalogue, of the materials in the national archives of Paraguay in Juan F. Perez, "Los Archivo de la Asuncion".

The "Revista del Archivo Nacional del Peru" has been publishing a description of the contents.

The "Boletin del Archivo Nacional" is publishing archival indexes for Venezuela.

For France the most valuable guides are "Catalogue general des manuscrits des bibliotheques, publiques de France: Universite de Paris et universites des departements"; for the Bibliotheque Nationale, Catalogue general des manuscrits francais.

One should also consult the Manoel de Oliveira Lima Mss. in the Catholic University, Washington, and the very important collection of Braziliana at Duke University.

Rayford W. Logan

Notes by Professor Charles T. Loram:

Mendelsohn Collection "perhaps the best collection of South Africana in the world" at the Public Library, Capetown.

The Gibbins Collection, University of Witwatersrand, Johannesburg, "famous".

Library of the Houses of Parliament, Capetown "reasonably good collection."

Encyclopaedia of the Negro - Sources of Materials

41/12F/20

1. The Catholic University Library (D. C.) is very strong in Latin Americana and has the best collection of books regarding Brazil in the United States (over 20,000).

2. The Pan-American Library also has valuable material.

3. Several of the Missionary Libraries are very stron on Africa, for example:

Day Missionary Library, Yale University

Hartford Theological Seminary, Hartford, Connecticut

United Missionary Library in New York City (I have not the exact name)

Leo Wiener, Author of Africa and the Discovery of America, has also written Mayan and Mexico Origins. Cambridge, Mass, 1926. $60,00 in which he traces them to the Mandigos of Africa. (H.A.H.R., VII, 100-102) James Alexander Robertson says that most persons are likely to laugh at his conclusions. They are, it is true, based almost entirely on linguistic data.

Says Robertson: "Whether one grant or not that Wiener's linguistic data are correct---and the present writer dare not presume to prove or disprove this---he can not fail to be struck by the vast sweep of the test... It should be noted that Wiener's arguments find ready acceptance among many prominent European scholars." Bring out that J. J. Williams in his Hebrevisms of West Africa did the same thing.

Nefertari

30 - 30 - 1

NEFERTARI, of Aahmes Nefertari, was the half sister and wife of Aahmes, Pharoah of Egypt, who reigned from 1587 to 1562, B. C. Aahmes was the founder of the eighteenth dynasty of Egyptian rulers and it was through him that Egypt was redeemed from the so-called Shepherd Kings. The mother of Aahmes and Nefertari Aahotep I, had only the mulatto strain that ran through all Egyptians, but she married a full-blooded black man, Suquenenra. Nefertari, therefore, was a dark mulatto woman, usually painted and described as black. She became, as Petrie says, "The most venerated figure of Egyptian history". After her death she was adored as a goddess and had a shrine and priesthead. According to royal Egyptian custom Nefertari married her half-brother, Aahmes, the reigning Pharoah in 1597 B. C. They had seven children, among them the celebrated Amenhotep I, who lived to be one of the great kings of Egypt. Nefertari was born in 1613 B. C. and died toward the end of the fifteenth century.

She was a foremost figure in the restoration of the distracted Kingdom and laid the foundations of its future greatness under her descendents.

ANTARA IBN SHADDAD

ANTARA IBN SHADDAD was born about 525 A. D., and died about A. D. 615. His father was an Arab of noble blood and his mother, Zabuba, was a Negro slave. At first Antara was neglected but he soon gained attention and respect for himself through his personal qualities, and especially on account of his great courage as a soldier. He took part in numerous wars between Arabian tribes and died in a fight against the Tai tribe. Antara is celebrated as a poet. His chief poem or series of poems is contained in the Moallakat. The whole of the Antar cycle fills thirty-two volumes and is a greater piece of literature than the better known "Arabian Nights". The Antara poems celebrate the love

30-30-3

of black Antar, "The Lion", for Abla, a chief's daughter and granddaughter of King Zoheir, whom Antara married. His fame as a poet and here still persists in Arabia and the Oriental world.

MOHAMMED ABOU BEKR ET-TOURI

MOHAMMED ABOU BEKR ET-TOURI, better known as Askia The Great, was a pure blooded black man of the Songhay, a kingdom south of Sahara which arose in the middle age. Askia was born about 1445 on an island in the Niger river. He was educated as a Mahammedan and became prime minister to Sonni Ali, the Great, the conqueror whose conquests consolidated the kingdom of the Songhay. Sonni Ali died in 1492 during his greatest campaign. He was not succeeded by his sons, but by Mohammed Abou Bekr, who was received with the cry of "Askia", or "Usurper". Sonni Ali conquered the empire; Askia organized it; he appointed inspectors of markets and unified the weights and measures; he founded a system of banking and credit; and a great university at Sankore which was in correspondence with the universities of North Africa and Egypt. Askia has been described as: "one of the best of God's creatures". He was a working scholar and a man instinct with goodness." His nature was as pure as it was upright." Travelers describe great towns and palaces, sumptuous dress in his kingdom, libraries of the rich and learned and horses from Banbary.

Askia reigned thirty-six years. His empire extended from Lake Chad to the Atlantic, a distance of about 2,000 miles, and was about 1000 miles at its greatest diameter. It was an area about two-thirds that of the United States. Old age brought blindness to him and he was deposed by his eldest son and expelled from the palace. Finally, however, he was returned to the palace with honor. He died in 1538 and was succeeded by four of his sons.

30-30-4

DE SUNA VICTORIA

The See of Panama is the oldest See of the Catholic church on the American continent. The first church in the diocese was built early in the sixteenth century. The seat of the bishop was at old Panama and the first cathedral was built out of funds from his private purse. This bishop was the Right Reverend Francisco Javier de Luna Victoria. He was the first American Catholic bishop of American birth and he was a Negro. His father, a freed Negro slave, was a charcoal burner near Boca de la Reo Grande who peddled his charcoal on the streets of Panama. He educated his son and gave him to the church. When the See of Panama became vacant by the promotion of Bishop Sataneda, to Peru, the mitre fell upon the head of the preist, Francisco, who had risen in the various degrees of the heirarchy by his merits and virtues. The news of his nomination caused much dispute among the other priests, but he was accepted by the already wealthy city of Panama, and well received. He became bishop August 15, 1751 and held this charge until 1759, when he was transferred to the See of Trujillo, Peru, a city founded by Pizarro, which was a flourishing city, with a cathedral and a college.

CRISPUS ATTUCKS

CRISPUS ATTUCKS was born a slave in Massachusetts in 1723 and died in 1770 as the first martyr of the American Revolution. He was a mulatto, six feet, two inches high, with short, curly hair. In 1750 at the age of twenty-seven he ran away from his master, William Brown, of Farmingham, Mass. He had learned to read and write and interested in the effort of the colonies to free themselves. In the spring of 1770, British troops encamped at Boston. The citizens became greatly enraged and formed themselves into clubs. Crispus Attucks led one of these clubs and he wrote thus to the tory Governor, Hutchinson: "Sir, you will hear from us with astonishment. You ought to hear from us with horror. You are changeable before God and man with our blood. The soldiers are but passive instruments, mere machines, neither moral or voluntary agents in our destruction, more than the leaden pellets with which we were wounded. You are a free agent; you acted cooly, deliberately,

30-30-5

with all that premeditated malice, not against us in particular, but against the people in general, which, in sight of the law, is an ingredient in the composition of murder. You will hear from us further hereafter." On March 5, 1770 some of the clubs began to riot. The one led by Crispus Attucks ran toward King Street, crying "Let us drive out the ribalds. They have no business here." The people rushed toward the sentinel before the Custom House, brandishing clubs and pelting him with snow balls. As Attucks started to strike Captain Preston, the soldiers fired. He and two other soldiers were killed, and five were severely wounded. This was the beginning of the American Revolution. Crispus Attucks was buried from Fanueil Hall with great honor. A statue to him and his two companions stands upon Boston Common.

RICHARD ALLEN? BISHOP

RICHARD ALLEN was born in Philadelphia, Pa., February 14, 1760. He purchased his freedom and was eventually ordained a deacon by Bishop Asbury. He worked as a laborer and teamster. Along with many other Negroes he worshipped at St. George's M. E. Church in Philadelphia. The increasing number of Negroes became objectionable to the whites and finally made to segregate

the Negroes to the gallery. Allen and Absalom formed the Free African Society. Out of this society grew the African Methodist Episcopal Church under Allen and St. Thomas's Episcopal Church, under Jones. Allen was ordained first bishop of the new A. M. E. Church in 1816. He died March 26, 1831. The church which he founded has become one of the largest organizations of the Negroes in the world with 750,000 members and $15,000,000 worth of church property.

LOTT CAREY, MISSIONARY

LOTT CAREY was born in Richmond, Va. about 1780. He was a tobacco packer and is said to have lived an especially wicked life. About 1807 he was converted to Christianity by a sermon based on the story of Nicodemus. He determined to learn to read and write. He saved money and purchased his freedom and then announced his intention of going to Africa as a Missionary. He sailed in June, 1820, to Sierra Leone, West Africa. In 1828 he became acting governor of Liberia, and was killed in an explosion, November 10, 1828. For many years he was the real head of the colony.

30-30-7

IRA ALDRIDGE, Actor

IRA ALDRIDGE was born in 1810 at Bel Air, Md. and died at Lodz, Poland in 1867. His father was a clergyman and intended his son for the ministry. Ira was educated at Schenectady College, New York, and Glasgow University, Scotland, where he distinguished himself for scholarship. He soon abandoned the idea of becoming a minister and in 1833 made his debut as "Othello" at the ~~Royalx~~ Royal Theatre, London. His success was immediate. Edmund Kean played Iago to his Othello and other actors vied in honoring him. In 1852 Aldridge started for the continent. The king of Prussia bestowed upon him a gold medal of the first class for Art and Science, a medal previously awarded only to Humboldt, Spontini and Lizst. The emperor of Austria gave him a grand cross of the Order of Leopold. The city of Berne gave him the Maltese Cross. He was also given the Royal Saxe House Order. In Russia he was made a member of the Imperial Academy of Arts and Sciences, and received other honors. From ~~1852~~ 1852 until his death, Aldridge was recognized in Europe as the first of living tragedians equalled only by the wonderful Rachale. He was married twice; first to

50-30-9

an English lady and then to a Swedish lady by whom he had two daughters. Both these daughters have achieved prominence in England as singers and composers.

BENJAMIN BANNEKER, Surveyor and Astronomer

BENJAMIN BANNEKER was born in Baltimore County, Md., November 9, 1731. His grandfather, Banaky, had been brought from Africa and eventually married his owner, Mollie Welch, an English peasant woman. One of their children, Mary was married to a native African, Robert who took her name. Benjamin was their eldest child. In 1737, Benjamin's father purchased for 17,000 pounds of tobacco, a farm of one hundred acres, ten miles from Baltimore. Benjamin was educated in a private school. After the death of his father, in 1757, he managed the farm and kept up his studies. He assisted in the laying out of the boundaries of the District of Columbia and in locating the chief buildings. In 1753 he constructed the first clock ever made in America. He borrowed some astronomical books and instruments and in 1787 compiled an almanac, which was finally published in 1792. In sending a copy of his almanac to Thomas Jefferson, Banneker spoke of himself as "of the African race," and "of the deepest dye." Jefferson replied: "Nobody wishes more

30-30-9

than I do to see such proofs as you exhibit that nature has given to each black brother talents equal to those of the other colors of men." Banneker never married. He remained on his farm making his calculations and practising on his violin. One who has seen him says that he gave no indication of white blood, but that "The statue of Franklin at the library in Philadelphia as seen from the street is a perfect likeness of him." Banneker died in 1804.

PAUL LAURENCE DUNBAR

PAUL LAURENCE DUNBAR, the son of Joshua and Matilda Dunbar, was born at Dayton, O., June 27, 1872. His father ran away from slavery in Kentucky and became a member of the 55th Massachusetts Regiment during the war. Paul was delicate. He began writing poetry when he was but a boy. When his father died he became an elevator boy. His poems began to appear in the papers of Dayton. His first book, "Oak and Ivy" was published in 1893; his second book, published in 1895, brought him the attention of William D. Howells who said: "Dunbar if the first black man to feel the life of the Negro ecstatically and to express it lyrical." Dunbar then published "Lyrics of Lowly Life," "The Lyrics of the Hearthside," and several novelettes. In 1897 he visited England and in 1898 was married. He died at the age of 34, February 9, 1906.

55-30-10

EDWARD W. BLYDEN, Publicist

EDWARD WILMOT BLYDEN was born August 3, 1832 on the Island of St. Thomas, Danish West Indies and died February 7 at Freetown, Sierre Leone, West Africa. In 1850 he came to New York and was refused admission to various colleges an account of his race. He, therefore, went to Liberia and studied at the high school at Monrovia. In 1858 he became principal of the school. He took a helpful part in Liberian politics and was Liberian minister to England. He traveled extensively in the United States and in the East. His greatest work is "Christianity,x Islam and the Negro Race". He became a noted linguist, having especial knowledge of the Arabic. He was an honorary member of the famous Athenaeum Club of London and a Doctor of Divinity of Lafayette and Hamilton Colleges. He was personally acquainted with many of the distinguished men of his time like Gladstone, Herbert Spencer and Charles Dickens.

FREDERICK DOUGLASS, Abolitionist

FREDERICK DOUGLASS was born a slave at Tuckahoe, Md., in February 1873. His father was white and his mother was a Negro slave. At the age of ten he was

30-30-11

sent as a house servant to Baltimore where his mistress taught him to read and write. In 1838 he ran away and came to New Bedford, Massachusetts, where his wife, Anna, followed him. Here he worked as a laborer, sawing wood and shovelling coal. He began to read The Liberator and in 1841 addressed a large anti-slavery convention at Nantucket.

This was the beginning of his career. He was soon employed as an agent and lectured all over the North. His fame, however, made his capture as a fugitive slave likely and he went to England where he was received by John Bright and other distinguished men. The English furnished money to buy his freedom. He thereupon returned to the United States and established his paper, the North Star at Rochester, New York. He was one of the advisors of John Brown but he did not take part in the raid. He helped raise the first Negro regiments for the war.

After the war Mr. Douglass held many positions of honor. He was one of the presidential electors at large for the State of New York in 1872; United States Marshal for the District of Columbia under President Hayes; Recorder of Deeds for the District of Columbia under President Garfield and United States Minister to Haiti

30-30-12

under President Harrison. Frederick Douglass died February 2, 1895 and was undoubtedly the greatest man of Negro blood in the United States.

SAMUEL COLERIDGE-TAYLOR, a Composer

SAMUEL COLERIDGE-TAYLOR was born August 15, 1875 in London. His father, Daniel Hughes Taylor, a native of Sierre Leone, West Africa, came to England to study medicine. His mother was an English woman, Alice Hare. The father practised his profession for a while in England and after a time returned to England leaving the mother and child in poverty: but the musical genius of the boy was early discovered and he began a course of study. He entered the Royal College of Music at sixteen, and in 1898, published his first celebrated work, "Hiawatha's Wedding Feast." Other works followed quickly. Coleridge-Taylor was especially attracted by Dunbar's poems and by folk music. He visited the United States twice and was much honored here by the best musicians. He published over one hundred musical works, including "Andymions Dream", "A Tale of Old Japan" and incidental music to Faust and Othello. He dies prematurely of overwork and exposure, September 1, 1912. He left a widow and two children, a boy and a girl.

30-32-13

He became one of the foremost composers of his day and warned the neice of a former Oxford professor, Miss Jessie Walmsley, "Never was a marriage, disapproved of by well-meaning friends more triumphantly justified in its secrets".

SAMUEL A. CROWTHER, Bishop

SAMUEL ADJAI CROWTHER was born about 1809, in West Africa and sold into slavery in Yoruban in 1821. He was rescued the following year and landed at Sierre Leone, where he was educated in a missionary school. He became a teacher and energetic missionary on the Niger river. In 1842 he entered the Church Missionary College in England. The next year he was ordained a priest and returned to Africa where he labored with great success among his people preparing school books, translating the Bible, establishing trade, and improving agriculture. In 1864, in England, he was consecrated first bishop of the Niger territories. He died of paralysis, December 31, 1891. Crowther was a man of great industry, wisdom and piety.

ROBERT D. ELLIOT, Statesman

ROBERT BROWN ELLIOTT was born in Boston, Mass., August 11, 1842 of West Indian parents. He attended a private school, then was sent to Kanaica and finally to High Holborn Academy, London. Later he went to Eaton and

30-30-14

then studied law. He returned to the United States and settled in South Carolina. He was a full-blooded Negro, nearly six feet high and a careful and clear speaker. He became a leader of the Reconstructionists in South Carolina, a member of the Constitutional Convention and afterward a member if the state legislature for two years. After holding the office of assistant adjutant general of South Carolina he was selected as a representative to the 42d congress. His first speech in Congress on the finances of South Carolina was especially notable as was,also, his great speech on the civil rights bill which as someone has said: "ought to form a part in the course of English in every colored school." Elliot was re-elected to the 43d congress but resigned to become sheriff. In 1881 he was made special agent of the United States treasurt, and after President Garfield's assassination he practised law in Pensacola, Fla. He died August 9, 1894, in New Orleans, La.

MENELIK, Emperor

MENELIK, THE SECOND, King of the Kings of Ethiopia and Emperor of Abyssinia, was born in 1844. He was the son of the prince of Shoa. He claimed an unbroken descent of nearly 3,000 years from Maqueda, Queen of Sheba. When the Emperor Theodore committed suicide, in ~~1889~~ 1867, ~~was proclaimed~~ Menelik became King of Shoa, and in 1889, was proclaimed Emperor of Abysinnia. Italy backed by Great

30-30-15

Britain tried to gain a protectorate over Abyssinia by misconstruing a treaty. Menelik resisted energetically and in 1893 he inflicted the crushing defeat of Adoa upon the Italians, leaving 7,000 of them dead on the field. His great Queen Taitou, led one of the charges against the foe. Since then Abysinnia has been unmolested by Europeans. Menelik died of old age in 1913 and was succeeded by his nephew.

PHILLIS WHEATLEY, Poet

PHILLIS WHEATLEY was born in 1753 in Africa. She was stolen by slave dealers when she was seven years old and offered for sale in Boston, Mass., in 1761. John Wheatley, a well-to-do- tailor bought her. She was well treated by her owners. After sixteen months she had learned the English language and could write letters. When she was thirteen years old she was writing poetry and became proficient in Latin. Her precocity astonished the educated people of New England. Her poem on Harvard University was written in 1767 and poems to the king, to George Whitefield, and to George Washington followed. In 1772 her health became affedted and the Wheatley's took her to London where she was petted and honored, received by

the Lord Mayor, and a collection of her poems published. In the preface of this book a letter to the public is inserted signed by the Governor and Lieutenant Governor of Massachusetts, John Hancock and many distinguished persons. George Washington wrote her a letter and said: "If you ever come to Cambridge, or near headquarters, I shall be very happy to see a person so favored by the muses." Phillis married John Peters, a colored man, who kept a shop and wore a wig. This proved an unhappy marriage and Phillis was reduced to hard straits to earn her daily bread. She finally died December 5, 1784. Phillis has been called the Negro Sappho and she was certainly compared with the writers of her time, a notable figure in American literature.

TOUSSAINT L'OVERTURE, Emancipator

PIERRE DOMINIC TOUSSAINT, known as Toussaint L'Overture, was born in Haiti about 1746. His father was the second son of an African chief. From childhood Toussaint showed unusual ability and became superintendent of the other slaves on the plantation. He joined the insurgents in the insurrection of 1791 and acted as physician. Later he joined the Spaniards, but after the freedom of the slaves was declared, he went to the aid of the French. In 1796 he took command of all the armies of San Domingo, made himself master of the country and independent. This seriously

30-36-17

interfered with the dreams of Napoleon who lost 25,000 men in trying to subdue Toussaint. Finally, through treachery Toussaint was seized and sent to France where he died after studied humiliations April 7, 1803. He was undoubtedly one of the great men of all time. A French planter has said: "God in His Terrestrial globe did not commune with purer spirit."

ALEXANDER POUSHKIN, Poet and Novelist

Among favorites of Peter the Great and his consort, the famous Catherine, was a Negro educated in France called Haninvalov, He became a general in the Russian army and married the daughter of a Greek merchant. His son was the general of artillery who built the harbor and fortress of Cherson. His grandson was ALEXANDER POUSHKIN, the greatest of Russian poets. Alexander was born at Moscow, June 7, 1799. In 1811, he entered the Lyceum of Tsarskoe Selo, and six years later ~~attached~~ he became attached to the ministry of foreign affairs and began writing poetry. He mingled with the greatest society; but a daring ode forced him to accept a position at Bessarabia. It was during this period that he composed some of his finest works. Poushkin was finally allowed to return St. Petersburg where he continues his writing

and in 1831 he married Natālia Goncharov. Becoming jealous of the attentions Baron d'Anthis to his wife Poushkin challenged him and fell mortally wounded in the duel. He died February 10. D'Anthis was tried by court martial and expelled from the country. Poushkin left four children and one of his decendents recentlt married a prince of the English royal family. Alexander Poushkin is regarded as the founder of modern Russian literature and a statue has been erected to him in Moscow.

STEPHEN DORANTES, Discoverer

STEPHEN DORANTES, known as Estevanico, or Stephen, slave of Andres Dorantes, was born somewhere in Africa but the time and place is not known. He is described as "black" and "a person of intelligence". The viceroy, Mendoza, writing to the Emperor, Charles the V, December 10. 1537, informs him that he has bought of Dorantes, a Negro, whose name was Stephen, because he was a person of intelligence. This Negro had wandered, together with three white Spaniards in the Narvaez expedition, to what is now Texas and had turned south and west through Mexico. They arrivedto the city of Mexico to give the viceroy an account of the country which they had seen and heard of north and northwest.

8J-31-19

The viceroy thereupon bought Stephen as a guide. Stephen had learned the Indian language and when the viceroy decided to send an expedition into the new country he selected Friar Marcus de Nice as leader and Stephen as guide. The expedition started March 7, 1539. When they reached Vacapa the whites waited and Stephen was sent ahead. He left March 23. Stephen explored the country to a distance of eighty leagues into the wilderness but when he arrived at Cibola he was ambushed and killed and his baggage plundered. The site at Cibola is some fifteen miles southwest of the present village of Zuni. Thus, Stephen Durantes was the first foreigner to tread upon the territoty of Arizona and New Mexico and has the honor of discovering them to the modern world.

ALEXANDER DUMAS, Novelist

ALEXANDRE DAVY DE LA PAILLETERIE, known as Alexander Dumas, was born in France in 1802. His father who called hinself Thomas Alexander Dumas was born in San Domingo and was the son of Antoine Alexandre Davy, Marquis de la Pailleterie, and Marie Cessette Dumas, a Negro woman. The father accompanied his grandfather to France in 1780. At

the outbreak of the Revolution Thomas enlisted as a private soldier but by 1793 he had become a general of division, and wasx famous for his victories. He married in 1792 and his son Alexandre Dumas, like his father, took his grandmother's name. Alexandre was educated by a priest and studied to be a lawyer. He finally became a clerk in Paris and a playwright. In 1839 he began to write stories and novels and his energy and output was tremendous. He said he had written 1200 volumes but because of his extravagant generosity was, nevertheless, always in debt. Dumas died December 5, 1870. His statue has been placed in the Place Malesherbes in Paris.

AMENHOTEP III, Pharoah

AMENHOTEP III, Pharoah of Egypt, was born 1414 B. C. and died 1379. He was the son of Tahutmes IV and a direct descendant of the great Nefertari. His mother, Mutemua, added to the already Negroid family a new strain of Negro blood. He married the brilliant and much-loved Queen Tyi. Amenhotep was born at Thebes and was probably about sixteen years old when his father died. He was a great conqueror in Ethiopia and in Syria. He is celebrated

30 - 30-21

both for his public works and especially for his great buildings. The greater part of the wonderful temple at Karnak was built during his reign, and the temple at Luqsor. together with many other buildings. The wealth and leisure of all classes under this king is shown by works that far exceed in extent and beauty the remains of other ages. He was succeeded by his son, Amentohep IV.

BOOKER T. WASHINGTON, Educator

BOOKER TALLIAFERRO WASHINGTON was born in 1858 or 1859, near Lynchburg, Va. His mother was a Negro woman and his father a white man. When Booker was a child his mother moved to West Virginia where his step-father worked in the salt mines. Under great difficulties the boy learned to read and write. In 1872 he entered Hampton Institute and was graduated in 1875. He taught public school and finally in 1881 was given charge of a small normal school at Tuskegee, Ala. This school had then thirty pupils in an old shanty, and an abandoned church. He developed his charge until it became one of the greatest schools in the South. Through his advocacy of the form of training at Hampton and Tuskegee he became the apostle of industrial training and discouraged

30-30-22

political activity among his people. Before his death he had become the leading personage among the colored people, was favorably regarded by the white South, while his school at Tuskegee embraced 2300 acres of land and was valued at $875,000, with an endowment of nearly $2,000,000. Mr. Washington's autobiography "Up from Slavery" is a notable contribution to literature.

ANTONIO MACEO, Liberator

ANTONIO MACEO was a mulatto, a descendent of the Negroes of Cuba. He was born
He was not ashamed of his race and to an inquiry as to whether or not he resented to be classed as a Negro, he replied: "When the black man is not ashamed to be a black man, there'll be no shame in being black." In 1895 there was launched the insurrection which culminated in the freedom of Cuba. The war had really begun under Maceo and other chiefs in 1866 and lasted ten years resulting in the abolition of slavery. As Spanish economic oppression continued Maceo and his fellows began a new struggle in 1895. Maceo ordered the "Invasion", that is, he bade the bands of Cuban revolutionists then in the field elsewhere, to rendevous in Pinar del Rio, where there was

something to be had to eat. Despite Spanish resistance, his ragged companies crossed the trochas, came around Havana, and even from Santiago and Camaguey, arrived within the province of Pinar. Out of Pinar, refreshed and somewhat reorganized, Maceo was leading them toward Havana itself when he was killed at Punta Brava, in Havana Province, within eighteen miles of the capital. But the chief work had been done. Soon the United States intervened and Cuba was free.

30-30-23

To Maceo and Gomez fell the largest share of the glory of the last war for Cuban freedom and in 1916 Cuba erected a bronze and marble statue in Maceo Square, Havana, to her dark liberator.

The best working definition of the word Negro

We are attempting this year a rather broad inquiry into what the word Negro must mean in this encyclopaedia. In America we have a well understood working definition, that is, persons of evident or acknowledge descent from the darker races of Africa.

In consultation last year with various European anthropologists I was continually reminded of quite different definitions of the word in other parts of the world. Professor Westermann of Berlin for instance would not include under "Negro" any Asiatics; he would exclude Hottentots and Bushmen and the so-called Hamites of the north central part of Africa, many of whom are the darkest people of the world. Seligman in his book on the "Races of Africa" excludes not only the Hottentots and Bushmen but the Bantu and the Hamites and confines his word Negro to "true Negroes" in West Africa and finds there a large infiltration of other blood. In the West Indies it is well known that the word "Negro" does not include persons of mixed blood.

36-3-54

It will be necessary therefore for us to settle on a working definition and a definition if possible which will clear up certain inconsistent uses of the word. If we divide the races of man into black, white and yellow then into the black race must go all the peoples of Africa except the recent white immigrants and the Berbers and Arabs and their descendants of the north and northeast. When, however, we use the word Negro race interchangeably with black race which most people ordinarily do, there come continued discrepancies; so that black people of the Nile, black people of Abyssinia, black people of Uganda and black people of South Africa are continually referred to even by scientists as not being of the Negro race. That, however, involves a definition of Negro much narrower than any corresponding definition of the Caucasion or Mongolian. All Caucasians are not blue eyed and yellow haired and tall of stature. All Mongolians are not yellow, slant eyed and straight haired. But all Negroes apparently must be not only dark skinned but have hair of a precise degree of curliness and facial and head forms of an extreme type and in other ways correspond to a minute and largely stereotyped form. A recent author quotes Vergil as scientifically true today:

> "Torta comam, labroque tumens et fusca colorem,
> Pectore lata, iacens mammis, compressior alvo
> Cruribus exilis, spatiosa prodiga planta,"

Manifestly one is talking in the first place of broad divisions of mankind subject to infinite variation and in the other case of a special and on the whole unusual type of man even in Africa. To clear up these matters we will search for past and current definitions and correspond with present authorities. Finally we hope to decide upon a reasonable and clear cut definition according to current usuage or logical and desirable usuage.

Argument

There will be those who think that the role of the Negro as laborer is his fateful one in America and others who would think that his work, active and passive, in emancipation is the most important thing; but it is quite possible that posterity will find that the great contribution of the Negro to America and the world is a contribution to art, an appreciation for beauty and a conception of beauty new and peculiar and gripping. In the literature of America the Negro is ever present as the

 K of C

writings of Stowe, Whittier, Lowell, Nelson, Page and others easily prove. Indeed it is not too much to say that no great masterpiece of American literature is without its direct or indirect portrayal of the Negro. But the influence of the Negro in American literature is not merely passive. Negro folk lore and quaintness of expression pervades the land. The writings of Negroes from Phillis Wheatley to Dunbar and Chestnut have increasing influence. The paintings of Tanner, while in no respect racial, are a continual example of racial possibilities and finally the only American music is Negro music and it ranks with the most beautiful music of the world.

CHAPTER 7. THE GIFT OF THE SPIRIT

Outline

African Religion
The African Priest in America
Religious Rites
Voodooism
The "Shout"
Efforts of Catholic and Protestant Missionaries
Rise of Negro Church
Influence of Negroes on American Religion
The Spiritual development —

Argument

Above and beyond all we have mentioned and perhaps least tangible but just as true is the peculiar spiritual quality which the Negro has injected into American life and civilization. Sometimes this is loosely called his spirit of happiness and jollity but it is far more subtle than this: it is an unfailing faith in the world, an unfaltering hope for betterment and a wide and patient tolerance for opposition and hatred. It is this that is at the basis of Negro religion and with all the loose organization of the Negro church the individual religious charactertistics

The Negro in the Revolutionary War

"It was a Negro who in a sense began the actual fighting. In 1750 William Brown of Framinham, Mass., advertised three times for "A Molatto Fellow about 27 Years of Age, named Crispas, 6 Feet 2 Inches high, short Curl'd Hair." This runaway slave was the same Crispus Attucks who in 1779 led a mob on the 5th of March against the British soldiers in the celebrated "Boston Massacre."

Much has been said about the importance and lack of importance of this so-called "Boston Massacre." Whatever the verdict of history may be, there is no doubt that the incident loomed large in the eyes of the colonists. Distinguished men were orators on the 5th of March for years after, until that date was succeeded by the 4th of July. Daniel Webster in his great Bunker Hill oration said: "From that moment we may date the severance of the British Empire."

36-2-146

Possibly these men exaggerated the actual importance of a street brawl between citizens and soldiers, led by a runaway slave; but there is no doubt that the colonists, who fought for independence from England, thought this occasion of tremendous importance and were nerved to great effort because of it.

Livermore says: "The presence of the British soldiers in King Street excited the patriotic indignation of the people. The whole community was stirred, and sage counsellors were deliberating and writing and talking about the public grievances. But it was not for the 'wise and prudent' to be first to act against the encroachments of arbitrary power. 'A motley rabble of saucy boys, Negroes and mulattoes, Irish Teagues and outlandish Jack tars,' (as John Adams described them in this plea in defense of the soldiers) could not restrain their emotion or stop to enquire if what they must do was according to the letter of the law. Led by Crispus Attucks, the mulatto slave, and shouting, 'The way to get rid of these soldiers is

to attack the main guard; strike at the root; this is the nest'; with more valor than discretion they rushed to King Street and were fired upon by Captain Preston's company. Crispus Attucks was the first to fall; he and Samuel Gray and Jonas Caldwell were killed on the spot. Samuel Maverick and Patrick Carr were mortally wounded. The excitement which followed was intense. The bells of the town were rung. An impromptu town meeting was held and an immense assembly gathered. Three days after, on the 8th, a public funeral of the Martyrs took place. The shops in Boston and the neighboring towns were rung. It is said that a greater number of persons assembled on this occasion than ever before gathered on this continent for a similar purpose. The body of Crispus Attucks, the mulatto, had been placed in Faneuil Hall with that of Caldwell, both being strangers in the city. Maverick was buried from his mother's house in Union Street, and Gray from his brother's in Royal Exchange Lane. The four hearses formed a junction in King Street and then the procession marched in columns six deep, with a long file of coaches belonging to the most distinguished citizens, to the Middle Burying Ground, where the four victims were deposited in one grave over which a stone was placed with the inscription:

'Long as in Freedom's cause the wise contend,
Dear to your country shall your fame extend;
While to the world the lettered stone shall tell
Where Caldwell, Attucks, Gray and Maverick fell.'

"The anniversary of this event was publicly commemorated in Boston by an oration and other exercises every year until our National Independence was ahcieved, when the Fourth of July was substituted for the Fifth of March as the more proper day for a general celebration. Not only was the event commemorated but the martyrs who then gave up their lives were remembered and honored."

THE HISTORY OF THE NEGRO IN SIX CHAPTERS

Undated
Outline of chapters 1 and 2

undated

The History of the Negro in Six Chapters

Chapter 1. - Africa and the Black Race

There is no more fascinating continent than Africa or one which has been more vital for the history of mankind and yet to-day few people know about its history or apparently care.

This is in the United States and in Europe a direct heritage from slavery. In order to bolsetr up slavery it was necessary to defend it and there arose between 1830 and 1860 a propaganda which both deliberately and unconsciously taught the world that Africa, the source of slaves, was worth nothing better than slavery. In truth, however, it was in Africa and the hot parts of southern Asia that human civilization began. It was in Africa that civilization was carried forward for thousand of years while the rest of the world was sunk in savagery. And it is Africa to-day that promises for the future a most interesting development both in material resources and in human development.

38-12-129

But when one makes these statements the answer is apt to come: "Oh yes this is true but the Africa of which you speak is not the Africa of the Negro;" which brings us to the problem: What is the Negro? Here we may note that in the case of no other race has the attempt been made to give so narrow a definition of race as in the case of Negroes. We would not think of fixing in the case of a white man, his lips and nose and exact skin color, the shape of his head and the form of his ankle bones. The concept white man covers a wide variety of physical and mental peculiarities; the same is perhaps even more true of the yellow man; and the same must be true of the Negro if we are to seek anything like scientific consistency. The Negro is the darkest of the varieties of men but like all other varieties, no exact line can be drawn between him and other varieties. We cannot speak of the darkest varieties of man in Africa as being "pure" Negroes any more than we speak of the Scandanavians as being the only "pure" whites. We might, of course, conceive the white races as consisting of "pure" whites with an infiltration

of darker blood and of the Negroes as being "pure" blacks with an infiltration of whiter blood; but neither statement is historically correct. What we have is light men and dark men with every shade between caused primarily by different climatic conditions and conditions of life and secondarily by intermarriage of lighter and darker stocks.

Africa, therefore, is the home of the Negro. He is found here in all varieties - tall, black and curly haired; short, black and kinky haired; yellow and crisp haired; swarthy and straight haired. For the most part, however, it is reasonable, according to fact and historic usage, to include under the word "Negro" the darker peoples of Africa characterized by a brown skin, curled or "frizzled" hair, full and sometimes everted lips, a tendency to a development of the maxillary parts of the face, and a dolichocephalic head. This type is not fixed or definite. The color varies widely; it is never black or bluish, as some say, and it becomes often light brown or yellow. The hair varies from curly to a wool-like mass, and the facial angle and cranial form show wide variation.

38-12-130

It is as impossible in Africa as elsewhere to fix with any certainty the limits of racial variation due to climate and the variation due to intermingling. In the past, when scientists assumed one unvarying negro type, every variation from that type was interpreted as meaning mixture of blood. To-day we recognize a broader normal African type which, as Palgrave says, may best be studied "among the statues of the Egyptian rooms of the British Museum; the larger gentle eye, the full but not over-protruding lips, the rounded contour, and the good-natured, easy, sensuous expression. This is the genuine African model." To this race Africa in the main and parts of Asia have belonged since prehistoric times.

These people from earliest times have inhabited the continent of Africa and their history has had physical as well as mental reasons. Africa is a peculiar continent with few bays and inlets, warded against the world by its coastal waterfalls; subject in various parts to great heat, great

dampness and great drought; luxuriant with vegetation in its central fastnesses which made it at once easy to nourish beginnings of human culture and difficult to progress in its later stages. But especially Africa by its very prolificness has spawned more of the active enemies of human physical life than perhaps any other continent. As ir Harry Johnston well remarks: "Africa is the chief stronghold of the real Devil - the reactionary forces of Nature hostile to the uprise of Humanity. Here Beelzebub, King of the Flies, marshals his nermiform and anthropod hosts - insects, ticks and nematode worms - which more than in other continents (excepting negroid Asia) convey to the skin, veins, intestines and spinal marrow of men and other vertebrates the micro-organisms which cause deadly, disfiguring or debilitating diseases, or themselves create the morbid condition of the persecuted human being, beasts, bird, reptile, frog or fish." The inhabitants of this land have had sheer fight for physical survival comparable with that in no other great continent, and this must not be forgotten when we consider their history.

In this land the Negro race began its development. Perhaps is came there with the migration of mankind from southern Asia or perhaps the original type of anthropoid ape which became man started in Africa and spread to the rest of the world. At any rate among the earliest, if not the earliest of the systems of human culture began with the Negro race in Africa in the highlands of the East Central part. Perhaps the original type of black man is typified by the present pygmies and these grew and differentiated, spreading West to the dense forests of the Congo and South slowly toward land's end, but especially North down the Valley of the Nile toward Ethopia and the Sudan; and in this Valley of the Nile the first great drama of Africa and the Negro race and perhaps of mankind began to be spread.

Chapter 2 - Egypt

We do not know certainly the movements of prehistoric man. Probably from some centre in southern Asia many thousands of years ago, the first human beings began to differentiate in two directions. The one was long-headed with flattened hair follicle; he moved along southern Asia and into Africa; or if the differentiation started in Africa, he staid there. To the North and East, broad-headed men with round hair follicle spread over eastern Asia forming the Mongolian type of man. Through the intermingling of these two types, the third type appeared at a very early date which eventually settled in Europe. These three types were not definitely and clearly differentiated from each other and intermingled their blood freely and developed variation according to climate and environment. Thus the primitive Negroid stock was evolved - the Semites on the one hand, the so-called Mediterranean race and the modern Negroes. The influence of these Negroids can be felt in the Negro type of the ancient statues in India and in early Babylon and all through the Arabian peninsula. Some of the Negroids by later migration made their way into southern Europe where traces of their skeleton and art have been found.

38-12-132

The primitive African was brown or yellow rather than black. He entered Africa or began his development there some fifty thousand years ago and settled in the region between Lake Chad and the Great Lakes and remained there long stretches of years. After a lapse of perhaps thirty thousand years there was a further migration of Negroid people, lighter and straighter haired then the primitive Negroes. From this Mediterranean race was developed the modern inhabitants of the shores of the Mediterranean and by mingling with the primtive Negroes there was developed the ancient Egyptians and the modern Negro xx race of Africa.

As we come to historic times migration and movements give the whole of Africa a distinct mulatto character. The primitive Negro stock was mulatto in the sense of not being widely differentiated from the dark

original stock. As the earlier yellow Negro developed in the African tropics to the bigger, blacker type, he was continually mingling his blood with other Negroid types developed in temperate climes to sallower color and straighter hair.

We find, therefore, in Africa to-day, every degree of development in Negroid stocks and every degree of intermingling of these developments, both among African peoples and between Africans, Europeans and Asiatics. The mistake is continually made of considering these types as transitions between absolute Caucasians and absolute Negroes. No such absolute type ever existed on either side. Both were slowly differentiated from a common ancestry and continually remingled their blood while the differentiating was progressing. From prehistoric times down to to-day Africa is, in this sense, primarily the land of the mulatto. So, too, was earlier Europe and Asia; only in these countries the mulatto was early bleached by the climate, while in Africa he was darkened.

Three main Negro types gradually became stabilized: the lighter and smaller primitive type - the larger forest Negro in the center and on the West Coast and the tall, black Nilotic Negro in the Eastern Sudan. From earliest historic times Negroes moved down the Valley of the Nile from the interior. Here from mingling with Semitic Types and after the lapse of Thousand of years, there arose from this mingling, the culture of Ethopia and Egypt, perhaps the first of the higher human cultures.

Ethopian civilization like all civilization arose largely from contact from without and spread down the valley of the Nile because that valley was so easily a meeting place of all types of people of all parts of the world. At the same time Egyptian civilization seems to have been African in its beginnings and in its main line of development, despite strong influences from all parts of Asia. Of what race, then, were the Egyptians? They certainly were not white in any sense of that word - neither in color nor physical measurements, in hair nor countenance, in language nor social

customs. They stood in relationship nearest the Negro race in earliest times, and then gradually through the infiltration of Mediterranean and Semitic elements became what would be described in America as a light mulatto stock of octoroons or quadroons. This stock was varied continually: now by new infiltration of Negro blood from the South now by negroid and Semitic blood from the east, now by Berber types from the north and west.

Egyptian monuments show distinctly Negro and mulatto faces. Herodotus, in an incontrocertible passage, alludes to the Egyptians as "black and curly-haired" - a peculiarly significant statement from one used to the brunette Mediterranean type; in another passage, concerning the fable of the Dodonian Oracle, he again alludes to the swathy color of the Egyptians as exceedingly dark and even black. Aeschylus, mentioning a boat seen from the shores, declares that its crew are Egyptians, because of their black complexions.

38-12-134

Modern measurements with all their admitted limitations show that in the Thebaid from one-seventh to one-third of the Egyptians population were Negroes, and that of the prehynastic Egyptians less than half could be classed as non-Negroid. Judging from measurements in the tombs of nobles as late as the eighteenth dynasty Negroes form at least one-sixth of the higher class. Such measurements are by no means conclusive but they are apt to be under rather than over statements of the prevalence of Negro blood. Head measurements of Negro Americans would probably place most of them in the category of whites.

The evidence of language also connects Egypt with Africa and the Negro race rather than with Asia, while religious ceremonies and social customs all go to strengthen this evidence.

The ethnic history of Northeast Africa would seem, therefore, to have been this: predynastic Egypt was settled by Negroes from Ethopia. They were of varied types: the broad-nosed, wooly-haired type to which the

word "Negro" is sometimes confined; the black, curly-haired sharper featured type, which must be considered an equally Negroid variation. These Negroes met and mingled with the invading Mediterranean race from North Africa and Asia. Thus the blood of the sallower race spread south and that of the darker race north. Black priests appear in Crete three thousand years before Christ, and Arabia is to this day thoroughly premeated with Negro blood. Perhaps as Chamberlain says: "one of the prime reasons why no civilization of the type of that of the Nile arose in other parts of the continent if such a thing were at all possible, was that Egypt acted as a sort of channel by which the genius of Negroland was drafted off into the service of Mediterranean and Asiatic culture."

38-12-125

To one familiar with the striking and beautiful types arising from the mingling of Negro with Latin and Germanic types in America, the puzzle of the Egyptian type is easily solved. It was unlike any of its neighbors and a unique type until one views the modern mulatto; then the faces of Rahotep and Nefert, of Khafra and Amenemhap 1, of Aahmes and Nefertari, and even of the great Ramessu 11, become curiously familiar.

The history of Egypt is a science in itself. Before the reign of the first recorded king, five thousand years years or more before Christ, there had already existed in Egypt a culture and art arising by long evolution from the days of paleolithic man, among a distinctly Negroid people. About 4777 B.C. Aha-Mena began the first of three successive Egyptian empires. This lasted two thousand years, with many Pharaohs, like Khafra of the Fourth Dynasty, of a strongly Negroid cast of countenance.

At the end of the period the empire fell apart into Egyptian and Ethopian halves, and a silence of three centuries ensued. It is quite possible that an incursion of conquering black men from the South poured over the land in these years and dotted Egypt in the next centuries with monuments on which the full-blooded Negro type is strongly and triumphantly impressed. The great Sphinx at Giseh, so familiar to all the world, the Sphinxes of Tanis,

the statue from the Fayum, the statue of the Esquiline at Rome, and the Colossi of Bubastis all represent black, full-blooded Negroes and are described by Petrie as "having high cheek bones, flat cheeks, both in one plane, a massive nose, firm projecting lips and thick hair, with an austere and almost savage expression of power."

Blyden, the great modern black leader of West Africa said of the Sphinx at Geseh: "Her features are decidedly of the African or Negro type, with 'expanded nostrils.' If, then the Sphinx was placed here - looking out in majestic and mysterious silence over the empty plain where once stood the great city of Memphis in all its pride add glory, as an 'emblematic representation of the king' - is not the inference clear as to the peculiar type or race to which that king belonged?"

38-12-136

The middle empire arose 3064 B.C. and lasted nearly twenty-four centuries. Under Pharaohs whose Negro descent is plainly evident, like Amenemhat 1 and 111 and Usertesen 1, the ancient glories of Egypt were restored and surpassed. At the same time there is strong continuous pressure from the wild and unruly Negro tribes of the upper Nile valley, and we get some idea of the fear which they inspired through Eghpy when we read of the great national rejoicing which followed the triumph of Usertesen 111 (c.2660-22) over these hordes. He drove them back and attempted to confine them to the edge of the Nubian Desert above the Second Cataract. Hemmed in here, they set up a state about this time and founded Nepata.

Notwithstanding this repulse of black men, less than one hundred years later a full-blooded Negro from the south, Ra Nehesi, was seated on the throne of the Pharaohs and was called "The King's oldest son." This may mean that an incursion from the far south had placed a black conqueror on the throne. At any rate, the whole empire was in some was shaken and two hundred years later the invasion of the Hyksos began. The domination of Hyksos kings who may have been Negroids from Asia lasted for five hundred years.

The redemption of Egypt from these barbarians came from Upper Egypt, led by the mulatto Aahmes. He founded in 1702 B.C. the new empire, which lasted fifteen hundred years. His queen, Nefertari, "the most beautiful venerated figure of Egyptian history" was a Negress of great beauty, strong personality, and of unusual administrative force. She was for many years joint ruler with her son, Amenhotep 1, who succeeded his father.

The new empire was a period of foreign conquest and internal splendor and finally of religious dispute and overthrow. Syria was conquered in these reigns and Asiatic civilization and influences poured in upon Egypt. The great Tahutmes 111 whose reign was "one of the grandest and most eventful in Egyptian history" had a strong Negroid countenance, as had also Queen Hatshepsut, who sent the celebrated expedition to reopen ancient trade with the Hotentots of Punt. A new strain of Negro blood came to the royal line through Queen Mutemua about 1420 B.C. whose son Amenhotep 111, built a great temple at Luqsor and the Colossi at Memnon. It was a granddaughter of this Pharaoh who married Tutankhamen, the recent discovery of whose tomb has revealed the splendid art of Egypt during the rule of these mulatto Pharaohs.

The whole of the period in a sense culminated in the great Ramessu 11, the oppressor of the Hebrews, who with his Egyptian, Libyan, and Negro armies fought half the world. His reign, however, was the beginning of decline, and foes began to press Egypt from the white north and the black south. The priests transferred their powers at Thebes, while the Assyrians under Nimrod overran Lower Egypt. The center of interest is now transferred to Ethopia, and we pass to the more shadowy history of that land.

32-12-137

JOHN BROWN

Material for revised edition

JOHN BROWN

A Preface

by W. E. B. Du Bois

A full century has passed since John Brown started in America the Civil War which abolished legal slavery in the United States and began the emancipation of the Negro race from the domination of white Europe and North America. John Brown in Kansas met murder with murder and tried in Virginia to arm slaves so that they might resist and escape slavery. Ever since his violent murder of the border ruffians who were trying to force slavery on Kansas and his attempt to seize the armory at Harpers Ferry so as to arm the slaves there had been bitter debate as to how far force and violence can bring peace and good will. This is a question that can never be completely answered for all circumstances and for all time. It is quite possible that time and searching conscience could have brought the emancipation of the slaves of the South without the catastrophe of war, murder and destruction, but that is by no means certain. It is quite possible that in time public opinion of an Abolitionist North could have forced the whole nation to embrace freedom for all men. But that certainly was not true ~~in~~ before the American Civil War.

On the other hand it was true that the violence which John Brown led made Kansas a free state; that the flight of the fugitive slaves was the beginning of abolition, and that the plan of John Brown to put arms in their hands could have hastened it. Although John Brown's plan failed at the time, it was actually arms and tools in the hands of a half-million Negroes that won the Civil War.

11

JOHN BROWN [1960]

by W. E. B. Du Bois

Insert p. 144

But behind it was greater cost: a million Indians lived in North America when the white man came, with a world of cultures behind them and many beginnings of civilization. But again and again catastrophe struck and the last was the discovery of America by Columbus. They received the white Europeans with curiosity and kindness. They gave them food and gold. In turn the white man stole and killed and tried to enslave, and their last theft was land. They stole the land of America from the Indians, used its wealth of fruit and gave it over to the rape of aristocrat, Puritan, slave and immigrant. Kansas was the last chapter of this great theft.

JOHN BROWN

by W. E. B. Du Bois

Set as is through page 4 ending: political life.

Then set the following copy for the rest of the chapter:

375

37-6-49a

And on all this was built John Brown's own inchoate but growing belief in a more just and a more equal distribution of property. From this he concluded, --and acted on that conclusion--that all men are created free and equal, and that freedom is not license.

In 1847 Frederick Douglass visited John Brown and heard of his plan to arm the slaves. In 1849 John Brown went to Europe to sell wool and visited France and Germany. That year he removed his family to North Elba, New York. Between these two dates, in 1848, Karl Marx and Friedrich Engels published the "Communist Manifesto". Ten years later, in 1859, the year that John Brown was executed, Charles Darwin published his "Origin of Species". These books transformed the world which Brown knew, but John Brown himself never read them.

As a sheep raiser and merchant, as farmer and trader, he knew much about property and the way it was produced and acquired. He early realized the way in which the worker was exploited and the consumer cheated. If he had read the "Communist Manifesto" he would certainly have agreed with much of it. He might even have realized how the worker through revolution could seize property and own capital. He could see and see clearly how the theft of human labor had put into the hands of a class of aristocrats tremendous power and prestige and the opportunity to overthrow the democratic process. He would have recognized in the socialism of Karl Marx a growing, conquering force destined to make democracy work if only it had the chance.

Since [illegible] the "Origin of the Species" was published, tremendous scientific and economic advance has been accompanied by distinct signs of moral retrogression in social philosophy. Strong arguments have been made for the fostering of war, the utility of human degradation and disease, and the inevitable and known inferiority of certain classes and races of men. While such arguments had not stopped the efforts of the advocates of peace, the workers for social uplift and the believers in human brotherhood, they had, it must be confessed, made their voices falter and tinged their arguments with apology.

32-2-46

Why is this? It is because the splendid scientific work of Darwin, Weismann, Galton and others has been widely interpreted as meaning that there is essential and inevitable inequality among men and races of men, which no philanthropy can or ought to eliminate; that civilization is a struggle for existence whereby the weaker nations and individuals will gradually succumb, and the strong will inherit the earth. With this interpretation has gone the silent assumption that the white European stock represents the strong surviving peoples, and that the swarthy, yellow and black peoples are the ones rightly doomed to eventual extinction.

One can easily see what influence such a doctrine would have on the race problem in America. It meant moral revolution in the attitude of the nation. Those that stepped into the pathway marked by men like John Brown faltered and large numbers turned back.. They said: He was a good man--even great, but he has no message for us today--he was "a belated Covenanter," an anachronism in the age of Darwin, one who gave us life to lift not the unlifted but the unliftable. We had consequently ~~the present reaction~~ a reaction which says in effect, Keep these black people in their places, and do not attempt to treat a Negro simply as a white man with a black face; to do this would mean the moral deterioration of the race and the nation --a fate against which a divine racial prejudice is successfully fighting. This is the attitude of the larger portion of our thinking people.

...ld assume that this was a logical development following new scientific ...ledge, but the doctrine of Karl Marx would easily prove that it was more than ... Industrial Revolution had taken place in the nineteenth century which increased the ... capital in private hands and this coupled with an extra... technical advance and new widely desired materials like sugar and cotton made great increase of wealth under private control possible. It was this itch for larger income in Britain and France together with sugar monopoly in the West Indies and the cotton kingdom in the United States that made ~~an equal~~ of West Europe and North America welcome scientific reasons for despising the mass of mankind and refusing to admit them to the new democracy. The result was colonial imperialism built on the new technique of western industry, fed by free land and raw materials in Asia and Africa and especially capped by the cheapest of colored labor.

The resultant attitude brought neither mental rest nor social peace. On the contrary, ~~it is today~~ it involved a degree of moral strain and political and social anomaly that gives the wisest pause. The chief difficulty has been that the natural place in which by scientific law the black race ~~in America~~ should stay, cannot easily be determined. To be sure, the freedmen did not, as the philanthropists of the sixties apparently expected, step in a century from slavery to ~~nineteenth~~ twentieth century civilization. Neither, on the other hand, did they, as the ex-masters confidently predicted, retrograde and die. Contrary to both these views, they chose a third and apparently quite unavailed way. From the great, sluggish almost imperceptibly moving mass, they sent off larger and larger numbers of thrifty workmen and artisans, some merchants and professional men, and even men of educational ability and discernment. They developed few world geniuses, few millionaires, and few captains of industry and only a small number of artists of the first rank, but they have in a century gotten rid of the greater part of their illiteracy, accumulated many billions of dollars of property and gained now and then respectable attention in the world's ears and eyes.

(8-8-47)

progress of the black man in America is due to the exceptional men among them and does not measure the ability of the mass. Such an admission is, however, fatal to the whole argument. If the doomed races of men are going to develop exceptions to the rule of inferiority, then no rule, scientific or moral, should or can proscribe the race as such.

To meet this difficulty in racial philosophy, a step has been taken in America fraught with the gravest social consequences to the world, and threatening not simply the political but the moral integrity of the nation: that step is denying in the case of black men the validity of those evidences of culture, ability, and decency which are accepted unquestionably in the case of other peoples; and by vague assertions, unprovable assumptions, unjust emphasis, and now and then by deliberate untruth, aiming to secure not only the continued proscription of all these people, but, by caste distinction, to shut in the faces of their rising classes many of the paths to further advance.

When a social policy, based on a supposed scientific sanction, leads to such a moral anomaly, it is time to examine rather carefully the logical foundations of the argument. And as soon as we do this many things are clear: First, assuming the truth of the unproved dictum that there are stocks of human beings whose elimination the best welfare of the world demands, it is certainly questionable if these stocks include the majority of mankind; and it is indefensible and monstrous to pretend that we know today with any reasonable assurance which these stocks are. We can point to degenerate individuals and families here and there among all races, but there is not the slightest warrant for assuming that there does not lie among the Chinese and Hindus, the African Bantus and American Indians as lofty possibilities of human culture as any European race has ever exhibited. It is, to be sure, puzzling to know why the Soudan should linger [redacted] in culture behind the valley of the Seine, but it is no more puzzling than the fact that the valley of the Thames was miserably backward as compared with the

banks of the Tiber. Climate, environment, facilities of communication and [illegible] all accident, have played a great part in the rise of culture among nations: to ignore these and assert dogmatically that the present distribution of culture is a fair index of the distribution of human ability and desert, is to make an assertion for which there is not the slightest scientific warrant.

What the age of Darwin has done is to add to the eighteenth century idea of individual worth the complementary idea of physical immortality. And this, far from annulling or contracting the idea of human ability, rather emphasizes its necessity and eternal possibility--the boundlessness and endlessness of human achievement. Freedom has come to mean not individual caprice or aberration, but social self-realization in an endless chain of selves: and freedom for such development is not the denial but the central assertion of the evolutionary theory. So, too, the doctrine of human equality passes through the fire of scientific inquiry, not obliterated but transfigured: not equality of present attainment but equality of opportunity, for unbounded future attainment is the rightful demand of mankind.

32-8-49

JOHN BROWN

by W. E. B. Du Bois

Insert p. 379 for third paragraph:

What now did the hegemony of the white races threaten? It threatened by means of brute force a survival of some of the worst stocks of mankind. It attempted to people the best parts of the earth and put in absolute authority over the rest, not ususally (and indeed not mainly) the culture of Europe but its greed and degradation--not only some representatives of the best stocks of the West End of London, upper New York and the Champs Elysees, but also, in as large if not larger numbers, the worst stocks of Whitechapel, the East Side and Montmartre; and it essayed to make the slums of white society in all cases and under all circumstances the superior of any colored group, no matter what its ability or culture. To be sure, this outrageous program of wholesale human degeneration was not always outspoken, save in the backward civilizations of the Southern United States, South Africa and Australia. But its enunciation was listened to with respect and tolerance in England, Germany, and the Northern states by those very persons who accuse philanthropy with seeking to degrade holy white blood by an infiltration of colored strains. And the average citizen voted ships and guns to carry out this program.

This movement gathered force and strength during the latter half of the nineteeth century and reached its culmination when France, Germany, England and Russia began the partition of China and the East. With the sudden self-assertion of Japan and the use of China and the leadership of the Soviet Union, its wildest dreams collapsed, but it is still today a living, virile, potent force and motive, the most subtle and dangerous enemy of world peace and the dream of human brotherhood. It has a whole vocabulary of its own: the strong races, superior peoples, race preservation, the struggle for survival and a variety of terms meaning the right of white men of any kind to beat blacks into submission, make them surrender their wealth and the use of their women and submit to dictation without murmur, for the sake of being swept off the fairest portions of the earth or held there in perpetual serfdom or guardianship. Ignoring the fact that the era of physical struggle for survival has passed away among human beings, and that there is plenty of room accessible on earth for all, this theory makes the possession of guns, airplanes and rockets the main criterion of mental stamina and moral fitness.

~~(p. 979 insert continued)~~

Even armed with this morality of the club, and every advantage of modern culture, Western Europe has been unable to possess the earth. Many signs of degeneracy have appeared among them: their birth-rate is falling, their average ability is not increasing, their physical stamina is impaired, and their social condition is not reassuring. Lacking the physical ability to take possession of the world, they are today fencing in Australia, New Zealand and South Africa and declaring that no dark race shall occupy or develop the land which they themselves are unable to use. And all this on the plea that their stock is threatened with deterioration from without, when in reality its most dangerous threat is deterioration from within.

(CONTINUE WITH BOOK - LAST LINE ... 581)

38-8-51

We are, in fact, today repeating in our intercourse between race all the former evils of class distinction within the nation: personal hatred and abuse, mutual injustice, unequal taxation and rigid caste. Individual nations outgrew these fatal things by breaking down the horizontal barriers between classes. We are bringing them back by seeking to erect vertical barriers between races. Men were told that abolition of compulsory class distinction meant leveling down, degradation, disappearance of culture and genius and the triumph of the mob. As a matter of fact, it has been the salvation of European civilization. Some deterioration and leveling there was but it was more than balanced by the discovery of new reservoirs of ability and strength. So today we are told that free racial contact--or "social equality" as Southern patois has it--means contamination of blood and lowering of ability and culture. It need mean nothing of the sort. Abolition of class distinction did not mean universal intermarriage of stocks, but rather the survival of the fittest by peaceful, personal and social selection--a selection all the more effective because free democracy and equality of opportunity allow the best to rise to their rightful place. The same is true in racial contact. Vertical race distinctions are even more emphatic hindrances to human evolution than horizontal class distinctions, and their tearing away involves fewer chances of degradation and greater opportunities of human betterment than in case of class lines. On the other hand, persistence in racial distinction spells disaster sooner or later. The earth is growing smaller and more accessible. Race contact will become in the future increasingly inevitable not only in America, Asia, and Africa but even in Europe. The color line will mean not simply a return to the absurdities of class as exhibited in the sixteenth and seventeenth centuries, but even to the caste of ancient days. This, however, the Japanese, the Chinese, the East Indians and the Negroes are going to resent in just such proportion as they gain the power; and they are gaining the power, and they cannot be kept from gaining more power. The price of repression will then be

hypocrisy and slavery and blood.

This is the situation today. Has John Brown no message--no legacy, then, to the twentieth century?

3x-8-53

JOHN BROWN

by W. E. B. Du Bois

These are the dates whose events conditioned John Brown and his acts. Beginning with the Battle of Plassy in 1757 the loot of India began to pour into England. In 1769 the steam engine was invented and in 1793, the cotton gin. Between 1784 and 1804 the Sugar Empire in the West Indies began to disintegrate and former slaves and free Negroes controlled Haiti. For this reason and because of the revolt of the British conscience against the cruelties of the trade in 1808 the British made the African slave trade illegal and other nations including the United States slowly followed. In 1820 the Cotton Kingdom in the United States began to rise reaching its zenith in 1860. The cotton crop increased from a half million bales in 1822 to its five million bales in 1860. All this meant a world change in the production and distribution of goods. Capital increased immensely in the hands of private owners and their subsequent control of labor in industry became almost complete.

The French Revolution had demanded freedom for the indivdual--the liberty to do as he pleased for what he considered his own good and the consequent good of mankind. But in the Nineteenth Century this freedom rapidly became license for private owners of capital to control industry and income and thus rule mankind. In the first half of the Nineteenth Century, in 1843, Karl Marx and Friedrich Engels called attention to this state of affairs in their "Communist Manifesto" which later Marx further developed in his great work on capital.

In the United States where John Brown lived the demand for "freedom" was still paramount and could be widely realized because land was free and there was an abundance of labor. John Brown never read the "Communist Manifesto" and knew little of the rise of Socialism. But he did realize that a suppressed and exploited part of the laboring class in America--the Negroes--had been deprived by capitalist and land monopolists of the freedom to earn a living and to direct their lives which was vital in John Brown's mind to a human being. He espoused therefore the freedom of the

slave knowing well that freedom alone was not the settlement of the Negro problem that this must be followed by education, the right to vote, and treatment as human beings. But all this he assumed was inherent in the American system and would follow the freedom of the slaves. Then in the year that he was crucified came Darwin's "Origin of Species" and gradually a changed attitude of science toward human beings. This was not merely a logical deduction from the doctrine of evolution. On the contrary it was used by those who desired large incomes through ownership of capital to excuse the growing reduction of the majority of the world's laborers to the cheap use of their toil and land for the increasing profit of capitalism.

38-6-55

The state impelled by the capitalists seized control of colonies using the labor in Asia and Africa and the islands of the seas instead of transporting it to America. By the use of this capital in far-off colonies the absentee landlord was replaced by the absentee investor so that the owners of capital knew less and less how their capital was used and were rewarded for this ignorance by increase of profit. This is characteristic of the capitalistsystem in this day. Owners do not know and gradually begin not to care how their capital is used so long as their income is assured and increases. The Western world consciously or unconsciously depends for its support, comfort and luxury on the low wage of colonial labor and the seizure of colonial land and materials. As a result of this we have war to force new divisions in the ownership of colonies and war between colonies and imperial powers.

All this John Brown did not know and could not foresee, but nevertheless he left a clear legacy: first, the right of the enslaved to repel oppression. Then beyond this a new attitude toward human beings and a belief in the abilities and character of the great mass of mankind. Even then as Lenin has shown must come a plan of life and work which will ensure the best interests of the masses and a discipline and dictation which shall through education and force compel the workers to follow and activate these plans. Out of this will arise a new interpretation of the word freedom. There must be left a wide individualism and yet no individual must be allowed to infringe upon another's freedom. In other words the future world will not be free in the sense that anyone can do what he pleases, but freedom in the

larger sense of having his acts work for the best interests of the peoples of the world. Beyond this science is psychology launched with Freud in 1895 a new concept of how the world works in its use of the human brain.

All this John Brown did not know and yet his life's work was in consonance with it. He believed in the abilities and worth of the souls of black folk. He believed in the gifts that they would be able to furnish America and he regarded them as equals to all Americans of any color. He believed that men should labor for what they earned and should not get their income by chance or inheritance. He believed in the freedom of the land and its fruits to be distributed in accord with the labor which was put upon it. Thus he was a pioneer in the fight for human equality and in the uplift of the masses of men.

There can be no doubt but that the progress of the emancipated slave in the United States since 1863 has been phenomenal. He has touched every phase of American development. He has furnished subjects for American writers and thinkers and himself contributed to American art, music and literature. He has given the nation invaluable labor and service, has taken notable part in the advance of science and discovery and without his own work, American industry could never have reached the heights which it has. The American Department of State in its desperate effort to fight Socialism and Communism has sought to emphasize Negro progress and has paid out considerable sums of money to bribe Negroes and induce them to travel and praise America in various parts of the world. Despite this, however, it is perfectly clear that while Negro progress has been great, it has not been nearly as rapid as it might have been had the Negro received decent treatment. He has been deliberately paid a lower wage than whites doing the same work or than immigrants from abroad. He has been denied perferment and promotion in industry ; kept out of scientific laboratories; discriminated against in scholarships and often actually beaten to submission to superior force and impudent assumption. If American Negroes had been given the chance that the Russian peasant has had since 1917 his contribution to the uplift of the world might easily have been startling. The repression and discrimination which he has met has held back the progress of the United States and the world and is

a thing of which this country must always be ashamed.

In murder and unjust punishment America has made a disgraceful record against the Negro race. Between 1882 and 1900, the whites lynched without trial four thousand Negroes beside killing more than ten thousand by mobs. When public opinion stopped lynching, injustice in the courts succeeded. A Negro had only to be arrested, to be found guilty and convicted in most Southern courts and many Northern. Three times as many Negroes in proportion to population go to prison as whites. Among children twice as many Negroes are arrested as delinquent. Half the prisoners serving life sentences and half those executed in the nation are Negroes who form but a tenth of our population. There is certainly crime among Negroes but it does not exceed that of the whites in anything like this proportion. The chief crime of Negro prisoners is the color of their skin. Not all America has approved or encouraged this injustice. Many have helped and defended the Negro, but the majority have permitted injustice without protest.

38-8-57

~~a thing of which this country must always be ashamed.~~

What would be the cost of liberty? What would be the cost of giving the great stocks of mankind every reasonable help and incentive to self-development--opening the avenues of opportunity freely, spreading knowledge, suppressing war and cheating, and treating men and women as equals the world over whenever and wherever they attain equality? It would cost something. It would cost something in pride and prejudice, for eventually many a white man would be blacking black men's boots; but this cost we may ignore--its greatest cost would be the new problems of racial intercourse and intermarriage which would come to the front. Freedom and equal opportunity in this respect would inevitably bring some intermarriage of whites and yellows and browns and blacks. This might be a good thing and it might not be. We do not know. Our belief on the matter may be strong and even frantic, but it has no adequate scientific foundation. If such marriages are proven inadvisable, how could they be stopped? Easily. We associate with cats and cows, but we do not fear intermarriage with them, even though they be given all freedom of development. So, too, intelligent human beings can be trained to breed intelligently without the degradation of such of their fellows as they may not wish to breed with. In the Southern United States, on the contrary, it is assumed that unwise marriages can be stopped only by the degradation of the blacks--the classing of all darker women with prostitutes, the loading of a whole race with every badge of public isolation, degradation and contempt, and by burning offenders at the stake. Is this civilization? No. The civilized method of preventing ill-advised marriage lies in the training of all mankind in the ethics of sex and child-bearing. We cannot ensure the survival of the best blood by the public murder and degradation of unworthy suitors, but we can substitute a civilized human selection of husbands and wives which shall ensure the survival of the fittest. Not the methods of the jungle, not even the careless choices of the drawing-room, but the thoughtful selection of the schools and laboratory is the ideal of future marriage.

The greatest source of human rejoicing today is the phenomenal rise of the people of Russia. From an ignorant, despised, suppressed peasantry they have in less than a century become in many respects the leading nation of the world. They have abolished poverty, and from the masses have risen an extraordinary number of gifted men. Their system of education surpasses that of any other part of the world and their scientific contribution during the twentieth century is among the wonders of mankind.

To this must be added the resurrection of China. This largest nation in the world is rushing forward with unexampled speed and efficiency. Despite the effort of the United States to dismember it, lie about it, and keep it out of the United Nations, it is becoming one of the greatest modern nations. ~~of the world.~~

The cost of repression is today large and continually increasing. The exploitation of cheap labor, the seizure of the land and its fruit, the problem of unemployment and the curbing of corporations are a tremendous drain on modern Western society with no near end in sight.

38-8-56

JOHN BROWN

by W. E. B. Du Bois

Transcript 385

The cost is not merely in wealth but in social progress and spiritual strength, and it leads ever to explosion, murder, and war. ~~All these things but increase the difficulty of beginning a regime of freedom in human growth and development--they make the cost of liberty.~~ Not only that but the very explosions, like the world wars, ~~which bring carnival of crime,~~ tend in the complacent current philosophy to spread ignorance. ~~create the environment of oppression.~~ "Blood will tell," men say. "The fit will survive; atop an ice-bubble and inevitably the steam will burst the iron," and therefore only the steam that bursts is worth the generating; only organized murder proves the fitness of a people for liberty. This is a fearful and dangerous doctrine. It encourages wrong leadership and perverted ideals at the very time when loftiest and most unselfish striving is called for--as witness Japan after her emancipation, or America after the Civil War. Conversely, it leads the shallow and unthinking to brand as demagogue and radical every group leader who in the day of slavery and struggle cries out for change. ~~freedom.~~

38-8-60

For such reasons it is that the memory of John Brown stands today as a mighty warning to his country. He saw, he felt in his soul the wrong and danger of that most daring and insolent system of human repression known as Negro slavery. He knew that in 1700 it would have cost something to overthrow slavery and establish liberty; and that by reason of cowardice and blindness the cost in 1800 was vastly larger but still not unpayable. He felt that by 1900 no human hand could pluck the vampire from the body of the land without doing the nation to death. He said, in 1859, "Now is the day to strike for a free nation. It will cost something-- even blood and suffering, but it will not cost as much as waiting. And he was right. Repression--seldom bred slavery, until in 1861 the South was farther from freedom than in 1800.

(more)

The edict of 1863 was the [illegible] emancipation and its cost [illegible] and treasure was staggering. But it was not all--it was only a fir[illegible]. There were other bills to pay of material [illegible], mental regeneration, mental training and moral relief. These the nation [illegible] Fifteenth Amendment, the Freedmen's Bureau, the crusade of school teachers, the Civil Rights Bill and the decision of the Supreme Court on segregated schools. But the [illegible] determination of the South to pay no single cent or shed for past error save by force, led in the revolution of 1876 to the triumph of secession.

38-8-61

Reaction meant and means a policy of state, society and individual, whereby no American of Negro blood shall ever come into the full freedom of modern culture. In the carrying out of this program by certain groups and sections, no pains have been spared--no expenditure of money, ingenuity, ph physical or moral strength. The building of barriers around these black men has been pushed with an energy so desperate and unflagging that it has seriously checked the great outpouring of benevolence and sympathy that greeted the freedman in 1863. It has come so swathed and gowned in graciousness as to disarm philanthropy and chill enthusiasm. It has used double-tongued argument with deadly effect. Has the Negro advanced? Beware his further strides. Has the Negro retrograded? It is his fate, why seek to help him? Thus has the spirit of repression gained attention, complacent acquiescence, and even cooperation. To be sure, there still stand staunch souls who cannot yet believe the doctrine of human repression, and who pour out their wealth for Negro training and freedom in the face of the common cry. But a large minority of Americans seem to have forgotten the foundation principles of their government and the recklessly destructive effect of the blows meant to bind and tether their fellows. We have come to see a day here in America when one citizen can deprive another of his vote at his discretion; can restrict the education of his neighbors' children as he sees fit; can with impunity load his neighbor with public insult on the king's highway; can deprive him of his property without due process of law; can deny him the right of trial by his peers, or of any trial whatsoever if he can get a large enough group of men to join him; can refuse to protect or safeguard the integrity of the family of some men whom he dislikes; finally, can not only close the door of opportunity in commercial and social lines in a fully competent neighbor's face, but can actually count on the national and state governments to help and make effective this discrimination.

32-2-62

Such a state of affairs is not simply disgraceful; it is deeply and increasingly dangerous. Not only does the whole nation feel already the loosening of joints which these vicious blows on human liberty have caused--lynching, lawlessness, lying and stealing, bribery and divorce--but it can look for darker deeds to come.

38-8-63

DuP

And this not merely because of the positive harm of this upbuilding of barriers, but above all because within these bursting barriers are men--human forces which no human hand can hold. It is human force and aspiration and endeavor which are moving there amid the creaking of timbers and writhing of souls. It is human force that has already done in a generation the work of many centuries. It has crowded eager children through a wretched and half-furnished schools system until from an illiteracy of seventy per cent, two-thirds of the living adults can read and write. The great mass of these men is becoming daily more thoroughly organized, more deeply self-critical, more conscious of its power. Threatened though it has been naturally, as a proletariat, with degeneration and disease, it is today reducing its death-rate and beginning organized rescue of its delinquents and defectives. The mass can still today be called ignorant, poor and but moderately efficient, but it is daily growing better trained, richer and more intelligent. And as it grows it is sensing more and more the vantage-ground which it holds as a defender of the right of the freedom of human development for black men in the midst of a centre of modern culture.

32-8-19-4

It sees its brothers in yellow, black and brown held physically at arms' length from civilization lest they become civilized and less liable to conquest and exploitation. It sees the world-wide effort to build an aristocracy of races and nations on a foundation of darker half-enslaved and tributary peoples. It knows that the last great battle of the West is to vindicate the right of any man of any nation, race, or color to share in the worlds' goods and thoughts and efforts to the extent of his effort and ability.

Thus today the Negro-American faces his destiny and doggedly strives to realize it. He has his tempters and temptations. There are ever those about him whispering: "You are nobody; why strive to be somebody? The odds are overwhelming against you--wealth, tradition, learning and guns. Be reasonable. Accept the code of charity and the cant of missionaries and sink contentedly to your place as humble servants and helpers of the white world." If this has not been effective, threats have been used: "If you continue to complain, we will withdraw all aid, boycott your labor, cease to help support your schools and let you die and disappear from the land in ignorance, crime and disease." Still the black man has pushed on, has continued to protest, has refused to die out and disappear, and today stands as physically the most virile element in America, intellectually among the most promising, and morally the most tremendous and insistent of the social problems of the New World. Not even the silence of friends, or of those who ought to be the friends of struggling humanity, has silenced him. Not even the wealth of modern Golconda has induced him to believe that life without liberty is worth living.

On the other side heart-searching is in order. [illegible] this land of ours: poverty is certainly not growing less, [illegible] wasted, business honesty is far too rare, [illegible] is threatened, bribery is poisoning our public life, theft is honeycombing our private business, and voting is largely uninteligent. But these evils are not progress. There are brave men and women striving for social betterment, for the curbing of the vicious power of wealth, for the uplifting of women and the downfall of thieves. But their battle is hard, and how much harder because of our race problem -- because of the calloused conscience of caste, the peonage of black labor lands, the insulting of black women, and the stealing of black votes! How far are business dishonesty and civic degradation in America the direct result of racial prejudice?

Well do I know that many persons defend their treatment of undeveloped peoples on the highest grounds. They say, as Jefferson Davis intimated, that liberty is for the full-grown, not for children. It was during Senator Mason's

inquisition after the hanging of John Brown, whereby the Southern leader hoped to entrap the Abolitionists. Joshua R. Giddings, keen, impetuous and fiery, was on the rack. Senator Davis, pale, sallow and imperturbable, with all the aristocratic poise and dignity built on the unpaid toil of two centuries of slaves, said:

"Did you, in inculcating, by popular lectures, the doctrine of a law higher than that of the social compact, make your application exclusively to Negro slaves, or did you also include minors, convicts, and lunatics, who might be restrained of their liberty by the laws of the land?"

Mr. Giddings smiled. "Permit me," he said, ". . . with all due deference, to suggest, so that I may understand you, do you intend to inquire whether those lectures would indicate whether your slaves of the slave states had a right at all times to their liberty?"

"I will put the question in that form if you like it," answered Davis, and then Giddings flashed:

"My lectures, in all instances, would indicate the right of every human soul in the enjoyment of reason, while he is charged with no crime or offense, to maintain his life, his liberty, the pursuit of his own happiness; that this has reference to the enslaved of all the states as much as it had reference to our own people while enslaved by the Algerines in Africa."

But Mr. Davis suavely pressed his point: "Then the next question is, whether the same right was asserted for minors and apprentices, being men in good reason, yet restrained of their liberty by the laws of the land."

Giddings replied: "I will answer at once that the proposition or comparison is conflicting with the dictates of truth. The minor is, from the law of nature under the restraints of parental affection for the purposes of nurture, of education, of preparing him to secure and maintain the very rights to which I refer."[1]

[1] Report: Reports of Senate Committees, 36th Congress, 1st Session, No. 278; Testimony of Joshua R. Giddings pp. 147-156

by W. E. B. Du Bois

Insert p. 393 following first paragraph and as substitute for second and third paragraphs:

This debate is not yet closed. It was not closed by the Civil War. Men still maintain that East Indians, Chinese and Africans and others ought to be under the restraint and benevolent tutelage of stronger and wiser nations for their own benefit. Well and good. Is the tutelage really benevolent? Then it is training in liberty. Is it training in slavery? Then it is not benevolent. Liberty trains for liberty. Responsibility is the first step in responsibility.

Even the restraints imposed in the training of men and children are for values that will in the end make greater freedom possible. Is the benevolent exploitation of today of such a character? Is England trying to see how soon and how effectively the Rhodesian Negroes can be trained for self-government or is she willing to exploit them just so long as they can be cajoled or quieted into submission? Is France freeing North Africa? Is the South trying to make the Negroes responsible, self-reliant freemen of a republic, or the dumb driven cattle of a great industrial machine?

8-8-47

No sooner is the question put this way than the defenders of modern caste retire behind a more defensible breastwork. They say: "Yes, we exploit nations for our own advantage purposely--even at times brutally. But only in that way can the high efficiency of the modern industrial process be maintained, and in the long run it benefits the oppressed even more than the oppressor." This doctrine is as wide-spread as it is false and mischievous. It is true that the bribe of greed will artificially hasten economic development, but it does so at fearful cost, as America itself can testify. We have here a wonderful industrial machine, but a machine quickly rather than carefully built, formed of forcing rather than of growth, involving sinful and unnecessary expense. Better smaller production and more equitable distribution; better fewer miles of railway and more honor, truth, and liberty; better fewer millionaires and more contentment. So it is the world over, where force and greed and graft have exacted rich reward from writhing millions. Moreover, it is historically unprovable that the advance of undeveloped peoples has been helped by wholesale exploitation at the hands of their richer, stronger, and more unscrupulous neighbors. This idea is a legend of the long exploded doctrine of inevitable economic harmonies in all business life. True it is that adversity and difficulties make for character, but the real and inevitable difficulties of life are numerous enough for genuine development without the aid of artificial hindrances. The inherent and natural difficulties of raising a people from ignorance and unmoral slavishness to self-reliant modern manhood are great enough for purposes of character-building without the aid of murder, theft, caste, and degradation. Not because of but in spite of these latter hindrances has the Negro-American pressed forward.

This, then, is the truth: the cost of liberty is less than the price of repression, even though that cost be blood. Freedom of development and equality of opportunity is the demand of Darwinism and this calls for the abolition of hard and fast lines between races, just as it calls for the breaking down of barriers between classes. Only in this way can the best in humanity be discovered and conserved, and only thus can mankind live in peace and progress. The attempt to force all whites above all darker peoples is a sure method of human degeneration. The cost of liberty is thus a decreasing cost, while the cost of repression ever tends to increase to the danger point of war and revolution. Revolution is not a test of capacity; it is always a loss and lowering of ideals.

11

25

JOHN BROWN

by W. E. Du Bois

Insert p. 395 at end of second paragraph:

But if it is a true revolution it repays all losses and results in the uplift of the human race. One could wish that John Brown could see today the results of the great revolution in Russia; that he could see the new world of Socialism and Communism expanding until it already comprises the majority of mankind; until it has conquered the problem of poverty, made vast inroads on the problem of ignorance and even begun to put to flight the problem of avoidable disease. It has abolished unemployment and is approaching the great day when all men will do for the world what they are best suited to do and will receive in return from the world not all that each may want but everything that each man needs.

28-2-69

John Brown taught us that the cheapest price to pay for liberty is its cost today. The building of barriers against the advance of Negro-Americans hinders but in the end cannot altogether stop their progress. The excuse of benevolent tutelage cannot be urged, for that tutelage is not benevolent that does not prepare for free responsible manhood. Nor can the efficiency of greed as an economic developer be proven--it may hasten development but it does so at the expense of solidity of structure, smoothness of motion, and real efficiency. Nor does selfish exploitation help the undeveloped; rather it hinders and weakens them.

It is now a full century since this white-haired old man lay weltering in the blood which he spilled for broken and despised humanity. Let the nation which he loved and the South to which he spoke, reverently listen again today to those words, as prophetic now as then:

"You had better--all you people of the South--prepare yourselves for a settlement of this question. It must come up for settlement sooner than you are prepared for it, and the sooner you commence that preparation, the better for you. You may dispose of me very easily--I am nearly disposed of now; but this question is still to be settled--this Negro question, I mean. The end of that is not yet."

MORALS AND MANNERS AMONG NEGRO AMERICANS

(18th Atlanta University Conference)

1913

Draft fragments, including "The Woman in Black" which was published in revised form as Section 8, "Home Life."

The cause of this youthful crime is:

(I) The difficulty of adjusting the young to a caste system.

(2) The poor home training.

(3) The demand for young strong convict labor.

Other causes of crime are dimly discernible: the training of the past shows itself in 6000 convictions for larceny: for slavery and subsequent partial payment in kind played havoc with ~~obstructions~~ distinctions of private property in the thoughts of the freedmen. Then too, fighting and brawling seem natural, even commendable to a certain state of advancement, but, but the surrounding white group brand this crime as heinous: hence the 3500 commitments for assault and the 1177 Negro homicides.

Other causes of crime not shown in these figures are:

(I) Po verty

(2) Discouragement arising from lawless treatment and withdrawal of civil and political rights.

(3) Lack of self-respect under a caste system.

What now is the remedy for Negro crime?

I. Justice in Southern courts; Negroes on the police force and in the Jury box.

2. Abolition of the economic demand for criminals in the South.

3. Better housing and a free chance to work in the North.

4. National aid to Negro education.

5. Better wages.

6. Full civil and political rights for Negroes, on the same basis as they are granted to whites.

~~Finally let us remember~~ Two facts should be carefully considered. first, that as compared with European statistics, the rate of Negro commitments (~~more per million~~) is not large. France had in the nineteenth century figures varying from 2300 to 6000, England a rate of 22,000 convictions of all kind per million in 1891, and Ireland 43,565. Of course ~~then~~ judicial

processes are different, and stricter than ours, but also, we must confess, just so. Secondly there were in 1904 more than six million adult Negroes who were not arrested or committed to prison, and who did not deserve to be. They naturally resent being treated or discussed as though they belonged to the 24,000 actual delinquents or to the others deserving to be so classed.

THE WOMAN IN BLACK.

--oOOOo--

The world that worships womankind tries often to forget its darker sister whose

" . . . . visage is too bright
To hit the sense of human sight
And therefore to our weaker view
O'er laid with black, staid Wisdom's hue;
Black, but such as in esteem
Prime Memnon's sister might beseem
Or that starr'd Ethiop queen that strove
To set her beauty's praise above
The sea nymphs . . "

Yet these women must be remembered - these dark daughters of Sorrow, from the primal black All-mother of men down through the ghostly train of mighty womanhood who walked out of the veiled mysteries of Asia and of Africa; from the dark Candace of Nubia, warring with the world, through dusky Cleopatra, down by fierce Zinghas to our own Phillis and Harriet and Frances Harper. They were not all Negroes? I do not know; but they were touched with the livery of the Sun and whatsoever Africa touches then and now is forever her own.

The Father and his worship is Asia; the precocious forward-striving Child is Europe; but the land of the Mother is and was, Africa. In some subtle and mysterious way, despite her slavery and her burdens, the spell of the African mother pervades her land. "Strike me" cries the Mandingo, "but revile not my mother." And the Herero swears (O endless oath!) "By my mother's tears!" In home, in work, in council, in government, the hand of the African mother is omni-present; as I remember through memories of others, backward through my own family, it is the Mother I ever recall; the little far off mother of my grandmothers who

sobbed her life away in song, longing for her lost palm-trees and scented waters; the tall and bronzen grandmother, with beaked nose and shrewish eyes who loved and scolded her black and laughing husband as he smoked lazily in his high oak chair; above all my own mother with all her soft brownness - the brown velvet of her skin, the sorrowful black-brown of her eyes, and the tiny brown- cap of waves of her mianight hair as it lay now parted on her forehead. All the way back in these dim distances it is mothers and mothers of mothers that seem to count and fathers are shadowy memories.

So too as I look about me to-day in this veiled world of mine, despite the noisier and more spectacular advance of my brothers, I instinctively feel and know that it is the five million women of my race that really count; black women (and women whose grandmothers are black) are to-day furnishing fifteen thousand of our teachers; they are the main pillars and form two thirds the membership of our 40,000 churches, and have with small doubt raised three-fourths of the fift millions in church property. If we have to-day, as seems sikely a half billion of accumulated goods, who shall say how much of it has been wrung from the hearts of 700000 servant girls and washerwomen and 600,000 women toilers in the fields? As mistresses of two mill on homes they are to-day seeking in marvellous ways to show forth our strength and beauty and our conception of the truth.

To no modern race does its women mean so much as to us, nor come so near to the fulfillment of its meaning, as one of our women writes:

"Only the Black Woman can say "when and where I enter, in the quiet, undisputed dignity of my womanhood, without violence and without suing or special patronage, then and there the whole Negro race enters with me."

Their destiny and path in life thus cut singularly across that of the women of the whiter world and blazes a guiding way, whether they will see it or no. For these other women have long had their preordained place; to be beautiful, to be petted, to bear children. Such is their theoretic destiny and if perchance they have been ugly hurt and barren, that has been forgotten with studied silence. In partial compensation for this narrowed destiny (perfectly suited to but few) the white world has lavished its politeness upon womankind - its chivalry and bows its uncoverings, and courtesy - all the accumulated homage disused for courts and kings and craving exercise. The revolt of white women against this preordained destiny has in these latter days reached marvellous proportions but it is the revolt of aristocracy of brains and ability - the middle class and rank and file still plod on in the appointed path, paid by the homage the almost mocking homage of men.

From black women, however, (and from some others too but chiefly from black women and their daughters' daughters) this gauze has been withheld and with out semblance of such apology they have been frankly trodden under the feet of men. As Dr. Crummell puts it:

"In her girlhood all the delicate tenderness of her sex has been rudely outraged. In the field, in the rude cabin, in the wash-room, in the factory, she was thrown into the companionship of coarse and ignorant men. No chance was given her for delicate reserve or tender modesty. From her childhood she was the doomed victim of the grossest passion. All the virtues of her sex were utterly ignored. If the instinct of chastity asserted itself, then she had to fight like a tiger for the ownership and possession of her own person, and oftimes had to suffer pain and lacerations for her virtuous self-assertion. When she reached maturity all the tender instincts of her womanhood were ruthlessly

violated. At the age of marriage - always prematurely anticipated under slavery - she was mated as the stock of the plantation were mated, not to be the companion of ~~the~~ a loved and chosen husband, but to be the breeder of human cattle for the field or the auction block."

Down in such mire has the black motherhood of the race struggled - starving its own wailing offspring to nurse to the world their swaggery masters; wailing for their children's chains which affronted even the moral sense of an unmoral world. Many a man and woman in the South have lived in wedlock as holy as Adam and Eve and brought forth their black and brown and golden children, but because the darker woman was helpless, her chivalrous and whiter mate could cast her off at his pleasure and publicly sneer at the boy he had privately blasphemed.

I shall forgive the White South much in its final judgment day - I shall forgive it slavery for slavery is a world-old habit. I shall forgive its fighting for a well-lost cause and remembering that struggle with tender tears; I shall forgive its pride of race, the passion of its hot blood, and even its dear old laughable strutting and posing. But one thing I shall not firgive, neither in this world nor the world to come and that is its wanton and continued and persistent insulting of the black womanhood which it sought and seeks to prostitute to its lust. I cannot forget that it is such southern gentlemen into whose hands smug northern hypocrits of to-day are seeking to place our women's eternal destiny, men who insist on withholding from my mothers and wife and daughter those signs and appelations of courtesy and respect which he withholds from his white courtesans. What he has practiced he teaches to his children: On the streets of Nashville recently a beautiful girl passed a crowd of white boys playing marbles on the sidewalk.

"Wait till the lady passes" said one.

"She's no lady - she's a Nigger" answered another and they hooted the vilest epithets after her.

It is a little brown woman - beautiful, quiet, dignified and cultured who says:

"The feeling of slighted womanhood is unlike every other emotion of the soul. Happily for the human family, it is unknown to many and indescribable to all. Its poignancy, compared with which even Juno's spretae injuria formae is earthly and vulgar, is holier than that of jealousy, deeper than indignation, tenderer than rage. Its first impulse of wrathful protest and proud self-vindication is checked and shamed by the consciousness that self-assertion would outrage still further the same delicate instinct. Were there a brutal attitude of hate or of ferocious attack, the feminine response of fear or repulsion is simple and spontaneous. But sensibilities, from a hand which, by all known traditions and ideals of propriety, should have been trained to reverence and respect them, the condemnation of man's inhumanity to woman is increased and embittered by the knowledge of personal identity with a race of beings so fallen."

The result of this history of insult has been both fearful and glorious: it has birthed the haunting sheet-walker, the brawler and the beast of burden, but it has also, like the fire of the firring pot, begun to give the world a newer stronger woman, a woman unfed on blandishment and caramel, who out of the freedom thrown her for debauchery is bringing back to the world a personal liberty, economic independence and spiritual poise that will one day leaven and nerve the womanhood of the world.

All this has been preparing slowly and in the uncertain mists of years; first the far Wail of the Word with lisping Phillis and in stronger yet still fettered strain of Frances Harper, who saw and sang her Ethiopia as she stretched

" . . . Her bleeding hands abroad
Her cry of agony shall reach the burning
throne of God."

Then, in the days of abolition came the Music and the Vision: the voice of the Black Swan which the London Times declared on one occasion showed "as much pathos, power and effect as does the 'Swedish Nightengale', Jennie Lind" Mrs. Stowe heard her sing to fashionable London and wrote "Chevalier Bunsen, the Prussian Ambassador sat by me. He looked at her with much interest 'Are the race often as good looking?' he said. I said 'She is not handsome compared with many, tho' I confess she looks uncommonly well to day.' The singing was beautiful."

Afterward there came up from the hearts of the race, but out of the mouths of songsters like Jenny Jackson those wonderful Negro folk songs, transforming themselves and growing in the mouths of the Hyer sisters and Flora Batson; and finally this song struggled to life and form in the art of Edmorah Nahar in whom Dion Boucicault saw "the power and sacred fire of genius;" and Edmonia Lewis whose studio at Rome was known in two worlds.

All this was half hidden, half known; for the voices of black singers could not sing away the Veil, and even the colored artist whom Modjeska and others prophesyed as capable of reaching "the top as an actress" was allowed no place on the stage, while the sculptress hid in Europe. The zest for beauty and aspiration thus early started in Black America had therefore to turn back to the ways of toil: Sojourner

Truth, the black sybil of the Abolition movement must arouse the drowsy slave - nation; Harriet Tubman with her charmed life and mystic visions must creep into the jaws of death and lead three hundred fugitives to freedom; Mary Shadd must tramp afoot thro' the winter snows of Canada to teach and inspire the blacks who had escaped the "Land of the Free" and were cowering beneath the Lion's Paw; and the gentle Louise De Mortie must walk into the [illegible] and lay down her life for the fever-stricken, saying simply "I belong to God!"

All this must be and more, to bring forward new ideals, to develop new strength and opportunities for black womanhood. To-day these dreams of the mothers are coming true. We have still our poverty and degradation our lewdness and our cruel toil, but we have too a vast group of women of Negro blood who for strength of character cleanness of soul and unselfish devotion of purpose is easily the peer of any group in the civilized world to-day. And more than that in the great rank and file of our five million women we have the up-working of new revolutionary ideals which must in time have vast influence on the thought and action of this land.

To be sure these women high and low are objected to, and objected to apparently for reasons peculiarly exasperating to reasoning beings. When in this world a man comes forward with a thought a deed a vision, we ask not, how does he look? but what is his message. It is of but passing interest that the messenger is beautiful or ugly - the message is the thing. This which is axiomatic among men is but partially true if the messenger be a woman. The white world still asks that a woman

primarily be pretty and if she is no the rich pouts and asks querulously: What else are women for?

Now beauty

"is its own excuse of being;" -

but there are other excuses as most men know and when the white world objects to black women because it does not consider them beautiful the black world of right asks two questions - What is beauty? and suppose they are ugly - what then?

For the most part human beauty is a matter of passing whim or fashion- in B. C. 2000 a black skin, in 2000 A. D. a white skin; to-day full breasted sturdiness, to-morrow sylphl ke slenderness. It is a mad race that is set for the 20th century beauty to fulfil the whim of the day and to those who watch their antics philosophically the thought must often come: how far are black folk ugly and how far merely unfashionable? But the important question, thank God! lies far beneath such surface trifles and asks: if ugliness and untidiness and eccentricity of face and deed does not bind men from doing the world's work and reaping the world's reward, how far shall it bind women? Other things being equal we all would prefer to be beautiful face and form and suitably clothed, but most of us are not one of the mightiest revolts of the century is against the devilish decree that no woman is a woman who is not by present standards a beautiful woman.

This decree the black women of America have in large measure escaped. Not being expected to be merely ornamental they have girded themselves for work instead of adorning their bodies for play. Their sturdier minds have concluded that if a woman be clean healthy and educated she is as pleasing as God wills and far more useful than most of her sisters. If in addition to this she be pink and white and straight-haired, and her

fellow men prefer this, well and good. But if she be black and brown and crowned in curled mists this is surely the flimsiest excuse for spiritual incarceration or banishment.

The very attempt to do this in the case of Negro Americans has strangely overreached itself. By so much as the defective eyesight of the white world rejects black women as beauties by so much the more t it needs them as human beings - an enviable as many a white as many a white woman knows.

Consequently for black women alone hansome is that hansome does if they are asked to be no more beautiful than God made them; but they are asked to be effecient - to be strong, fertile, musceled and able to work. If they marry they must as independent workers be able to help support their family. For their men are paid on a scale that makes their sole support of a family impossible. On the whole colored working women are paid as well as whites for similar work save in some higher grades, while colored men get from one-fourth to three-fourths less than white men. The result is curious and three fold: the economic independence of black women is increased, the breaking up of Negro families must be more frequent and the number of illegitimate children decreases more slowly among them than other evidences of culture increase, just as was once true in Scotland and Bavaria. What does this mean?

Most critics of women assume that to-day civilization is making a three fold choice between marriage and celibacy broken and unbroken family life, monogamy and promiscuity. With such choices they insist and rightly insist on the superiorityof marriage, the prohibition of divorce and the enforcement of monogamy. But the bold truth is that while civilization to-day faces no such three fold choice as indicated, but

quite a different trio, viz: Unmarried mothers or childlessness, divorce or prostitution, subjection of women or the economic and political equality of women. We may blink and splutter at the facts but this is what the civilized world faces to-day and it is choosing with deliberate blindness, childlessness, prostitution and subjection of women. On the other hand its treatment of the darker American women has forced them willy-nilly toward unmarried motherhood, easy breaking up of families and economic independence. Is this black solution of a white problem ideal? It is not, but I solemnly maintain that the betrayed girl-mothers of the black belt are better phenomena of civilized life that the childless wives of New England; that the deserted black wives of the west side of New York are better than the white prostitutes of the East side, and that the economic independence of women black or white is the greatest bow of promise in the skies of the 20th century.

Black women of to-day are being trained as no pin-money puppets, but as the working partners of farmers, ditchers, servants and carpenters.

True, in upper circles, the American ideal of beautiful pampered idleness - the Harem seductiveness of aimless vegetating, - leads and tempts many of us; but even here the deep seated habit of sharing with the man the economic burden of family is wide spread, so that from the Georgia field hand to the Washington school teacher, I seem to see growing out of Negro family life in America, a new heaven and a new earth, despite divorce, and despite what the world is pleased to call illegitimacy.

Out of it will come woman's freedom - freedom for women black and white - economic freedom, political freedom and - dare I say it? - sex freedom. When this freedom is full we will no longer pay men for work

they do not do for the sake of their harem; we will pay women what th they earn and insist on their working and earning it; we will allow those to vote who know enough whether they be black or female, white or male and we will war race suicide not by further burdening the over-burdened but by honoring motherhood even tho' the sneaking father shirks his duty.

Some few women are born free and some amid insult and scarlet letters achieve freedom but our women in black had freedom thrust contemptuously upon them. With that freedom they are buying an untrammelled independence; and dear as the price they pay for it, it will in the end be worth every taunt and groan.

I surely see more of promise for the world's future in the Black woman toiling for a living at her tub to supplement the starvation wage of her mate than in the white woman lolling in luxury, silk and gilded with the dole of a master; I see more beauty in a woman girded for work and tousled with toil than in a strumpet frilled for the footlights. I have more respect for a black servant girl who falls in her frank longing for motherhood than for the pink doll held to decency by iron bands and lisping insults on the untethered.

True, the end is not yet the ideal floats afar and in my interpretation of the meaning of economic independence among black women I am doubtless dreaming beyond present fact, yet all I say is not dream; as a colored woman has written: "There is a sense in which the colored woman is the newest woman in America" I look around to-day upon a growing group of black women leaders who are becoming more and more conscious of this fact. In this group are at least 500 college bred women and many thousands trained in high schools and academies. These women far more than their brothers are taking hold of the work of social reform; for thirty years a Woman's club of Wilberforce, Ohio has aided needy students; for seven years those in St.

Louis have supported an orphans home at the cost of seven thousand dollars. The colored women of Indianapolis have in recent years secured better work for 150 women; a Boston club has a home for working girls; a New Bedford club has a home for the aged and has collected nearly $40,000 endowment. The Alabama women have a state reformatory, the Illinois women, a hospital and orphanage; the [redacted] the Louisville, Ky. women have an industrial and charitable club housed in 20 rooms, a Springfield, O. group supports a day nursery. In North Carolina 250 working women by paying 25¢ a year and a pound of food a month care for six old people and keep watch over three hundred children. A Pennsylvania club has a colored woman as probation officer; a Michigan club has given $300. in charity in ten years; a Detroit club has sewing classes at an expense of $140 a year, while a Texas club has helped buy a piano for the colored schools and put drinking fountains in the yards.

As an entelligent colored woman observes:

"The club movement among colored women reaches into the sub-social condition of the entire race. Among white women clubs mean the forward movement of the best women in the interest of the best womanhood. Among colored women the club is the effort of the few competent in behalf of the many incompetent; that is to say that the club is only one of the many means for the social uplift of a race. Among white women the club is the onward movement of the already uplifted. The club movement among them is something deeper than a mere imitation of white women. It is nothing less than the organized anxiety of women who have become intelligent enough to recognize their own low social condition and strong enough to initiate the forces of reform."

Outside this club movement one might go on to point out other womens activities like the church workers, the school teachers and writers, the little group of artists and the 200 colored nuns in the American Catholic church. Who is it now that is leading this uplift of the women of a people? Of some of these new leaders even you, whose ears are stuffed with darkness, have heard. Seven women/ I might select who

typify the race to-day i its half developed wholly aspiring splendidly sacrificial spirit:

One typifying freedom who is among the clearest and most facile speakers of her sex in any land, a fearless champion in a crusade on two continents and an intrepid relentless breathless striver to-day. Another typical of self-sacrifice with her small smooth brownness - the builder and sustainer of a great school and the loving clean unspotted type of perfect self-forgetfulness; a third typical of brain power - a brilliant often unscrupulous intellect of marvellous facility and unconquerable energy, who twists thousands in her fingers. A fourth whose dramatic ability has held Boston spellbound and who (laugh! ye Gods!) was offered the position of leading lady in the Clansman! A fourth who up to last year led the 400 organized womens clubs and thro' them the active philanthopic rescue work among ten millions; a fifth whose conceptions in clay brought the notice of Rodin and a fifth whose voice was among the finest America has known but who is now singing to lead her own to song. This is no dream nor fantasy - these are real black women or granddaughters of black women of to-day. They mean something. Tomorrow they will mean more.

I honor them. Their beauty - their dark and mysterious beauty of midnight eyes and crumpled hair, and soft full-featured faces - is perhaps more to me than to you because I was born to its warmth and subtle spell; but their worth is yours as well as mine. No other women on earth could have emerged from the Hell of force and temptation that once engulfed and still surrounds black women in America with half the modesty and ~~purity and~~ womanliness that they retain. I have always felt like bowing myself before them in all abasement searching to bring some tribute to these long suffering victims, these burdened sisters of mine, whom the

world, the wise white world loves to affront and ridicule and wantonly to insult. I have known the women of many lands and nations - know and seen and lived beside them, but none have I known more sweetly feminine, more unswervingly loyal, more desperately earnest and more instinctively pure in body and in soul than the daughters of my black mothers. This then - a little thing - to their memory, and inspiration.

----ooOOOoo----

862-6-14

~~Not only this but today~~ this group is developing a social leadership and a sense of deep social responsibility. A glance at their work is almost bewildering. They furnish two-thirds of our teachers, an overwhelming majority of our church workers and no small proportion of our business folk, and in addition they are the ones who, turning from the beaten paths of bread and butter and livelihood, have taken up definitely and successfully the inner burden of social reform. Their work take s the form of general charity, womens clubs, olk folks homes, orphanages, hospitals, Christian associations, literary and art clubs, day nurseries, settlements, kindergartens and civil reform.

41-6-324

Who are the leaders and moving spirits in this renaissance of womanhood among black folk? It would be perhaps unwise to single out living leaders by name. But seven unnamed ones I might select who typify the race today in its partially developed, wholly aspiring, splendidly sacrificial spirit: One, typifying the thrist for freedom, is among the clearest and most facile speakers of her sex in any land, a fearless champion in a crusade on two continents and an intrepid relentless breathless striver today. Another, typical of self-sacrifice, with her small smooth brownness, is the builder and sustainer of a great school and the loving clean unspotted type of perfect self-forgetfulness; a third, typical of brain power, is a brilliant sometimes even unscrupulous intellect of marvelous facility and unconquerable energy, who twists thousands in her fingers; a fourth,- white granddaughter of blacks - whose dramatic ability has held Boston spellbound with a complete rendition of Anthony and Cleopatra - and who took the Belasco gold medal at Sargent's, was offered one year a place in the New Theatre when

§ 8. ~~Home Life~~ The Woman and Home Life.

The Woman in Black.

The world that worships womankind often forgets its darker sisters. They seem in a sense to typify that veiled melancholy

"Whose saintly visage is too bright
To his the sense of human sight,
And therefore to our weaker view
O'er laid with black."

Yet the world should not forget its these dark daughters of sorrow - from the primal black All Mother of men down through the ghostly throng of mighty womanhood who walked inthe mysterious dawn of Asia and Africa;

"That starr'd Ethiop queen that strove
To set her beauty's praise above
The sea nymphs."

Through dusky Cleopatra, dark Candaces and darker, fiercer Zinghas to our own day and our own land; in gentle Phillis, Harriet the crude Moses, the sybil Sojourner Truth and the martyr, Louise De Mortie.

The father and his worship is Asia; Europe is the precocious self-centered forward striving child. But the Land of the Mother is and was, Africa. In subtle and mysterious way, despite her curious

history, her slavery, polygamy and toil, the spell of the African mother pervades her land. Isis, the Mother is still titular goddess in thought if not in name, of the dark continent. Nor does this all seem to be solely a survival of the historic matridarchate through which all nations pass - it appears to be more than this as if the great black race in passing down the steps of human culture gave the world not only the Iron Age, the cultivation of the soil and domestication of animals but also in peculiar emphasis the Mother-idea. "No mother can love more tenderly, and none is more tenderly loved than the Negro mother" writes Schneider. Robin tells of the slave who bought his mother's freedom instead of his own. Mungo Park writes: " Everywhere in Africa, I have noticed that no greater affront can be offered a Negro than insulting his mother. 'Strike me,' cried a Mandingo to him enemy, 'but revile not my mother!" And the Krus and Fantes say the same. The peoples on Northern Zambeze and great lakes cry in sudden fear or joy: "O my mother!" And the Herero swears (Endless oath!) "By my mother's tears!" "As the mist in the swamps", cried the Angola Negro, "so lives the love of father and mother."

A student of the present Gold Coast life describes the Headman as head of the village:

"It is the duty of the Head of a family to bring up the members thereof in the way they should go; and by "family" you must understand the entire lineal descendants of a head materfamilias, if I may coin a convenient phrase. It is expected of him by the State to bring up his charge in the knowledge of matters political and traditional. It is ~~the~~ his work to train up his wards in the ways of loyalty and obedience to the powers that be. He is held responsible for the freaks of recalcitrant members of his family, and he is looked to to keep them within bounds, and to insist upon conformity on their part with the customs, laws, and traditional observances of the community.

It is a difficult task that he is set to, but in this matter he has all-powerful helpers in the female members of the family, who will be either the aunts, or the sisters, or the cousins, or the nieces of the Headman; and as their interests are identical with his in every particular, the good women spontaneously train up their children to implicit obedience to the Headman, whose rule in the family thus becomes a simple and an easy matter. "The hand that rocks the cradle rules the world." What a power for good in the Native State System would the mothers of the Gold Coast and Ashanti become by judicious training upon native lines!"

Schwemfuth declares of one tribe: "a bond between mother and child which lasts for live is a measure of affection shown among the Dyoor" and Ratzel adds:

Omit

Omit

Agreeably to the natural relation the mother stands first among

the chief influences affecting the children. From the Zulus to the Waganda, we find themother the most influential counsellor at the court of ferocious sovereigns like Chaka or Mtesa; sometimes sisters take her place. Thus even with chiefs who possess wives by hundreds the bonds of blood are the strongest," and the woman though often heavily burdened, is in herself in no small esteem among the Negroes is clear from the numerous Negro queens, from the medicine-woman, from the participation in public meetings permitted to women by many Negro peoples.

As I remember through memories of others, backward through my own family, it is the Mother I ever recall; the little far off mother of my grandmothers who sobbed life away in song, longing for her lost palm-trees and scented waters; the tall and bronzen grandmother, with beaked nose and shrewish eyes who loved and scolded her black and laughing husband as he smoked lazily in his high oak chair; only above all my own mother with all her soft brownness - the brown velvet of her skin, the sorrowful black-brown of her eyes, and the tiny brown-capped waves of her midnight hair as it lay new parted on her forehead. Allthe way back in these dim distances it is mothers and mothers of mothers that seem to count and fathers are shadowy memories.

Upon this African Mother-idea, the westward slave trade and American slavery struck like doom: in the cruel exigencies of the traffic in men and in sudden unprepared emancipation the great pendulum of social equilibrium swung from a time in 1800 when America had but eight or less black women to every black man all too swiftly to a day, in 1870, when there were nearly eleven women to ten men in our Negro population. This was but the outward numerical fact of social dislocation; within lay polygamy, polygandry, concubinage and moral degradation. They fought against all this desperately, did these black slaves in the West Indies among the half free artisans they set up their ancient household gods, and when Toussaint and Cristopher sat up their kingdom in Hayti it was based on old African tribal ties and beneath it the Mother-idea.

But the crushing weight of slavery fell on black women: under it there was no legal ~~control~~ marriage, no legal family, no legal control over children. To be sure custom and religion ~~were~~ replaced here and there what the law denied, yet one has but to read advertisements like these to see the Hell beneath the system:

"$100 reward will be given for my two fellows, Abram and Frank. Abram has a wife at Colonel Stewart's in Liberty county, and a sister in Savannah at Capt. Grovenstine's. Frank has a wife at Mr. LeConte's Liberty County; a mother at Thunderbolt, and a sister in Savannah.

- Wm. Robarts. Walthourville, 5th Jan., 1839.

"$50 Reward - Ran away from the subscriber, a negro girl named Maria. She is of a copper color, between 13 and 14 years of age - bareheaded and barefooted. She is small for her age - very sprightly and very likely. She stated she was going to see her mother at Maysville.

- Sanford Thomson.

"$50 Reward.- Ran away from the subscriber, his negro man Paula-dore, commonly called Paul. I understand Gen. R. Y. Hayne has purchased his wife and children from W. L. Pinckney, Esq., and has them now on his plantation at Goose Creek, where, no doubt, the fellow is frequently lurking.

- T. Davis.

The Presbyterian Synod of Kentucky said to the churches under their care, in 1835:

"Brothers and sisters, parents and children, husbands and wives, are torn asunder, and permitted to see each other no more. These acts are daily occurring in the midst of us. The shrieks and agony often witnessed on such occasions proclaim, with a trumpet tongue, the iniquity of our system. There is not a neighborhood where these heart-rending scenes are not displayed. There is not a village or road that does not behold the sad procession of manacled outcasts, whose mournful countenances tell that they are exiled by force from all that their hearts hold dear.

A sister of a president of the United States declared:

"We Southern ladies are complimented with the names of wives; but we are only the mistresses of seraglios."

Out of this what sort of black woman could be found into the world of today?! There are those who hasten to answer this query in writhing terms and who say lightly andrepeatedly that out of black slavery came nothing decent in womanhood; that adulatery and uncleanness was their heritage and is their continued portion. It is a terrible charge - a charge against millions of human beings - how many millions, few remember. The half million women of Negro descent who lived at the beginning of the 19th Century had become the mothers of two and one-fourth million daughters at the time of the Civil War and four and a half million granddaughters in 1900. Can all these women be vile and the hunted race continue to grow in wealth and character? Impossible. Yet to save from the past the shreds and vestiges of self-respect and chasity has been a terrible task - I most sincerely doubt if any other race of women could have brought its purity up through so devilish a fire. As the sainted Dr. Crummel once said of this his sister inthe blood:

"In her girlhood all the delicate tenderness of her sex has been rudely outraged. In the field, in the rude cabin, in the press-room, in the factory, she was thrown into the companionship of coarse and ignorant men. No chance was given her for delicate reserve or tender modesty. From her childhood she was the doomed victim of the grossest passion. All the virtues of her sex were utterly ignored. If the instinct of chastity asserted itself, then she had to fight like a tiger for the ownership and possession of her own person, and oftimes had to suffer pain and lacerations for her virtuous self-assertion. When she reached maturity all the tender instincts of her womanhood were ruthlessly violated. At the age of marriage- always prematurely anticipated under slavery - she was mated as the stock of the plantation were mated, not to be the companion of a loved and chosen husband, but to be the breeder of human cattle for the field or the auction block."

Down in such mire has the black motherhood of this race struggled - starving its own wailing offspring to nurse to the world their swaggering masters; welding for their children, chains which affronted even the

moral sense of an unmoral world. Many a man and woman in the South have lived in wedlock as holy as Adam and Eve and brought forth their brown and golden children, but because the darker woman was helpless, her chivalrous and whiter mate could cast her off at his pleasure and publicly sneer at the body he had privately blasphemed.

I shall forgive the White South much in its final judgment day - I shall forgive it slavery, for slavery is a world-old habit; I shall forgive its fighting for a well-lost cause and yet remembering that struggle with tender tears; I shall forgive its pride of race, the passion of its hot blood, and even its dear old laughable strutting and posing; but one thing I shall not forgive, neither in this world nor the world to come, and that is its wanton and continued and persistent insulting of the black womanhood which it sought and seeks to prostitute to its lust. I cannot forgive that it is such southern gentlemen into whose hands smug northern hypocrites of today are seeking to place our women's eternal destiny, men who insist on withholding from my mother and wife and daughter those signs and appellations of courtesy and respect which elsewhere he withholds only from bawds and courtesans. The result of this history of insult and degradation has been both fearful

and glorious: it has birthed the haunting prostitute, the brawler and the beast of burden; but it has also given the world a pure womanhood whose strength lies in its freedom and whose chastity was won in the teeth of temptation and not in swaddling clothes.

To no modern race does its women mean so much as to us, nor come so near to the fulfillment of its meaning; as one of our women writes:

"Only the black woman can say 'when and where I enter, in the quiet, undisputed dignity of my womanhood, without violence and without suing or special patronage, then and there the whole Negro race enters with me.'"

They come first in earlier days like foam flashes on dark, silent waters - bits of stern dark womanhood here and there tossed almost carelessly aloft to the world's notice. First and naturally they assumed the panoply of the ancient African Mother of Men - strong and black, whose very nature beat back the wilderness of oppression and contempt. Such an one was that cousin of my grandmother whom Western Massachusetts remembers as Mum Bett. Scarred for life by a blow received in defense of a sister she ran away to Great Barrington and was the first slave, or one of the first, to be declared free under the Bill of Rights of 1780. The Son of the judge that freed her, writes: "Even in her humble station, she had, when occasion required it, an air of command which conferred a degree of dignity, and gave her an ascendency over those of her rank, which is very unusual in persons of any rank or color. Her determined & resolute character, which enabled her to limit the ravages of a Shay's mob, was manifested in her conduct

and deportment during her whole life. She claimed no distinction; but it was yielded to her from her superior experience, energy, skill, and sagacity.

Having known this woman as familarly as I knew either of my parents, I cannot believe in the moral or physical inferiority of the race to which she belonged. The degradation of the African must have been caused otherwise caused than by natural inferiority."

It was such strong women that laid the foundations of the great Negro church of today with its three and half millions members and fifty-sex millions of dollars in property.

One of the early mothers of the church, Mary Still, writes thus quaintly, in the forties:

"When we were as castouts and spurned from the large churches, drive from ~~their kn~~ our knees, pointed at by the proud, neglected by the careless, without a place of worship, Allen, faithful to the heavenly calling, came forward and laid the foundation of this connection. The women, like the women at the Sepulchre, were early to aid in laying the foundation of the temple, and in helping to carry up the noble structure, and in the name of their God, set up their banner; most of our aged mothers are gone from this to a better state of things. Yet some linger still on their staves watching with intense interest the ark as it moves over the tempestuous waves of opposition and ignorance. * * * * But the labors of these women stopped not here, for they knew well

that they were subject to affliction and death. For the purpose of mutual aid, they banded themselves together insociety capacity, that they might be betterable to administer to each others' sufferings, and to soften their own pillows. So we find the females in the early history of the church, abounded in good works, and inacts of true benevolence."

From such spiritual ancestry came two striking figures of war time - Harriet Tubman and Sojourner Truth.

For eight or ten years previous to the breaking out of the civil war a constant attendant at anti-slavery conventions, lectures and other meetings was a black woman of medium size, smiling countenance, with her upper front teeth gone, attired in coarse but neat clothes with an old fashioned reticule at her side. As soon as she sat down she would drop off in sound sleep. She was born a slave in Maryland in 1820, bore the marks of the lash on her flesh and has been made partially deaf and perhaps to some degree mentally unbalanced by a blow on the head in childhood. Yet she was one of the most important agents of the underground railroad and leader of fugitive slaves. She ran away in 1849 and came to Boston in 1854 where she ~~and~~ was welcomed into the homes of the leading abolitionists and everyone listened with tense interest to her strange stories. She was absolutely illiterate with no knowledge of geography, and yet year after year she penetrated the slave states and personally led North over 300 fugitives without losing a single one. A standing reward of $1,000 was offered for her but as she said in her patois: "The whites cannot catch me, for I was born with a charm and the Lord has given me the power." She was one of John Brown's closest advisers and only severe sickness prevented her presence at Harper's Ferry.

When the War cloud broke she hastened to the front, flitting down

along her own mysterious paths, haunting the armies in the field, and serving as guide and nurse and spy. She followed Sherman in his great march to the Sea and was with Grant at Petersburg, and always in the camps of the Union officers silently saluted her.

The other woman belonged to a different type - a tall, gaunt, black unsmiling sybil, weighted with the woe of the world. She ran away from slavery and giving up her own name took the name of Sojourner Truth. She says: "I can remember when I was a little young how my old mammy would sit out of doors in the evening and look up at the stars and groan, and I would say, Mammy, what makes you groan so? and she would say, 'I am groaning to think of my poor children; they do not know where I be and I don't know where they be. I look up at the stars and they look up at the stars.'"

The test of her conversion to Christianity was when she could say: "Lord, I love even white folks!" Her determination was founded on unwavering faith in ultimate good. Wendell Phillips says that he was once in Faniuel Hall, Boston, where Frederick Douglass was one of the chief speakers. Douglass had been describing the wrongs of the Colored race, and as he proceeded he grew more and more excited and finally ended by saying that they had no hope of justice from the whites, no possible hope except in their own right arms. It must come to blood. The must

fight for themselves or it never would be done. Sojourner Truth was sitting tall and dark on the very front se t facing the platform, and in the hush of feeling when Douglass sat down she spoke out in her deep peculiar voice, heard all over the house: "Frederick, is God dead?"

Such strong primitive types of Negro womanhood in America seem to exhaust its capabilities. They know less of not more worthy but finer type wherein trembled all that delicate sense of beauty and striving for self-realization w ich is as characteristic of the Negro soul as is its quaint strength and sweet laughter. George Washington wrote in grave and gentle courtesy to a Negress in 1776 that he would "be happy to see" at his headquarters at any time a person "to whom nature has been so liberal and beneficent in her dispensations". This child, Phillis Wheatly, sang her brief and halting strain to a world that wondered and could not produce her like. Measured today her muse was slight and yet feeling her striving spirit we call to her still in her own words: "Through thickest glooms look back, Immortal shade." In the train of Phillis have other dark singers like Frances Harper, Admonia Lewis the sculptor and singers like the Black Swan

"Heard you that shriek? It rose
So wildly on the air,
It seemed as if a burdened heart
Was breaking in despair."

Now and then Frances Harper, the dark poet and lecturer of the Abolition crusade struck a sweet clear note that showed the gift within her; as when the echoes the cry of the bereaved slave mother

"Heard you that shriek? It rose
So wildly on the air,
It seemed as if a burdened heart,
Was breaking in despair."

Edmonia Lewis was born of a full-blooded Negro and a Chippewa Indian - she was short and dark, African in feature and Indian in hair. When she saw the statue of Franklin in Boston she said: "I too can make a stone man." A bust of Robert Gould Shaw enabled her to go abroad and she set up her studio in Rome. First came a statue of the outcast Hagar, for as she said, "I have strong sympathy for all women who have struggled and suffered." Then she carved a Madonna which was purchased by the Marques of Bute, and a long succession of excellent works. Her studio was visited by strangers of all nations.

The native song of the Negro race will produce great songsters when prejudice unbars the public stage. Already some have broken through the mists of whom perhaps the most noted was the Black Swan. Her voice, the London Times declared on one occasion, showed "as much pathos, power and effect as does the 'Swedish Nightingale', Jennie Lind". Mrs. Stowe heard her sing to fashionable London and wrote: "Chevalier Bunsen, the Prussian

Ambassador sat by me. He looked at her with much interest. 'Are the race often as good looking?' he said. I said, 'She is not handsome compared with many, though I confess she looks uncommonly well today.' The singing was beautiful."

Perhaps even higher than strength and art looms human sympathy and sacrifice as characteristic of Negro womanhood. Long years ago, before the Declaration of Independence, Kate Terynson was born in New York. Freed, widowed and bereaved of her children before she was twenty, she took the children of the streets of New York, White and black, to her empty arms, taught them, found them homes, and with Mr. Mason of Murray Street Church, established the first modern Sunday school in Manhattan. Sixty years later came Mary Shadd up out of Delaware. She was tall and slim, of that ravishing dream born beauty- that twilight of the races which we call mulatto. Well educated, vivatious with determination, shining from her sharp eyes, she threw herself singlehanded into the great Canadian pilgrimage when thousands of hunted black men hurried into Canada and crept beneath the protection of the Lion's paw. She became teacher, editor and lecturer, tramping afoot through winters snows, pushing without blot or blemish through

crowd and turmoil to conventions and meetings and finally becoming recruiting agent for the United States Government in gathering Negro soldiers in the West.

Before the War, the sacrifice of Negro women for freedom and uplift is one of the finest chapters in their history - one life will typify all: Louise DeMortie, a free born Virginia girl, lived most of her life in Boston. Her high forehead swelling lips and dark eyes marked her for a woman of feeling and intellect. She began a successful career as a public reader. Then came the War and the call. She went to the orphaned colored children of New Orleans - out of freedom into insult and oppression and in the teeth of yellow fever. She toiled and dreamed; in 1887 she had raised money and built an orphan home and that same year, in the 34th year of her young life, she died, saying simply: "I belong to God."

Such women it is, added to thousands of humbler black "mammies", faithful servants, toiling housewives and self-sacrificing mothers, who have builded the black womanhood of today.

~~In this land in 1900 there were 4,447,447 women of Negro descent - six hundred thousand of these were~~

Omit [As I look about me today in this veiled world of mine, despite the

noiser and more spectacular advance of my brothers, I instinctively feel and know that it is the five million women of my race who really count; black women (and women whose grandmothers were black) are today furnishing our teachers; they are the main pillars, and form two thirds the membership, of our churches, and have with small doubt raised three-fourths of the church property. If we have today, as seems likely, a six hundred million dollars of accumulated goods, who shall say how much of it has been wrung from the hearts of servant girls and washerwomen, and women toilers in the fields? As mistresses of two million homes these women are today seeking in marvelous ways to show forth our strength and beauty and our conception of the truth.

In this land in 1900 there were 4,447,447 women of Negro descent - twelve hundred thousand of these were children, another million were girls and young women under twenty and two million were grown women. As a mass these women were intelligent - a third of those from fifteen to twenty-five being unable to write. These women are passing through not only a moral but an economic revolution. Their grandmothers married at twelve and fifteen, but thirty per cent of these who have passed fifteen are still single. ~~Not only that but~~ My the economic foundation of the family - the ability to support and keep the group intact is not

In 1910 these figures had changed;
there were 4,941,882 colored women
of whom 2½ million were girls. Of these
ten years of age and over 30.7% were
illiterate & only 16% of those 15-19 years
of age. Marriage was more normal, 26.6%
of those 15 years of age & more boy single

yet certain, not simply because of moral laxness but principally because of low wages; for this reason is it that we find in 1900 one Negro woman in six widowed or separated from her husband, while among whites we find one in ten; in 1910 this condition had slightly improved, the figure for colored women being 15.9%.

Yet these black women toil and toil hard. There were in 1900, 1,832,818 Negro homes in the land. Out of these walked daily one and one-third million women and girls over ten to work - four out of every ten, as against one out of each six white women. These then are a group of workers fighting for their daily bread like men, independent, approaching economic freedom: they furnished a half million farm laborers, 70,000 farmers, 15,000 teachers and professional folk, 700,000 servants and washerwomen, and 40,000 in trades and merchandising. Add to these miscellaneous work and 200,000 school girls and we have nearly a million and a half. Subtracting the old and feeble, the defectives and the idle and we have probably less than one and a half million housewives to mann near two million homes. This is a sad deficiency and it tells for harm. Black mothers who ought to be home training their children are away at work. Girls who ought to be at school must help earn bread and butter. But while toil holds ~~their holds~~ their brothers in small towns and country, higher wages call the sisters to the city.

in the small towns and country, high wages calls the sisters to the city. The result is in cities like Washington and Baltimore the Negro women out number the men ~~thirteen to ten~~ ten to nine and the result is what Charlotte Perkins Gilman bluntly calls "cheap women" and illegitimacy.

In this mad heart-breaking struggle to live what then is the Negro woman's moral condition? There are plenty to hasten to say that it is bad, hopeless. It is often bad but it is infinitely better than we might easily expect. A Baltimore slum worker writes:

"My work in a large city has covered a period of nearly fourteen years. Thousands of girls have passed under my observation * * * * I believe the per cent of immorality to be low.

At this writing, my work is in a veritable slum. Degradation of every kind is rampant. In the next block above us houses of ill fame line both sides of the street. The occupants of these places are white. In a street parallel to this are houses occupied by both white and colored. Many of our children come from these places. The greatest per cent of degradation I have ever ~~seen~~ witnessed exists here, * * * but, taken all in all, I believe that eight per cent ~~of negro~~ would cover the mathematical reckoning as far as figures may be taken indicative of conditions of society.

MISCELLANEOUS

offeed this year a minor place in the New Theatre when death suddenly took her. She was, of course, white though black and onee (Laugh, ye Gods!) was offered the position of leading lady in the Clansman! A fifth is one who up to the last year led the 400 organized Negro women's clubs and through them the active philanthropic rescue work among ten millions; a sixth whose conceptions in clay brought the notice of Rodin, and a seventh whose voice was among the finest America has known but who is now singing to lead her own song. This is no dream nor fantasy - these are real black women or granddaughters of black women of today. They mean something. Tomorrow they will mean more.

What is today the message of these black women to America and the world? The uplift of Woman is next to the problem of the color line and the peace movement, the greatest modern cause. When now two of these movements - Woman and Color - combine in one, the combination has deep meaning.

In other years Woman's way was clear: to be beautiful, to be petted, to bear children. Such is their theoretic destiny and if perchance they have been ugly, hurt, and barren, that has been forgotten with studied silence. In partial compensation for this narrowed destiny (perfectly

suited to but few) the white world has lavished its politeness on its womankind - its ~~charit~~ chivalry and bows, its unciverings, and courtesy - all the accumulated homage disused for courts and kings and craving exercise. The revolt of white women against this preordained destiny has in these latter days reached splendid proportions, but it is the revolt of an aristocracy of brains and ability - the middle class and rank and file still plod on in the appointed path, paid by the homage, the almost mocking homage of men.

30-22-13

From black women of America, however, and from some others too, but chiefly from black women and thir daughters' daughters, this gauze has been withhold and without semblance of such apology they have been frankly trodden under the feet of men. They are and have been objected to, and objected to apparently for reasons peculiarly exasperating to reasoning beings. When inthis world a man comes forward with a thought, a deed, a vision, we ask not, How does he look? but What is his message? It is of but passing interest that the messenger is beautiful or ugly - the message is the thing. This which is axiomatic among men has been in past ages but partially true if the messenger was a woman. The world still wants to ask that a woman primarily be pretty and if she

is not the mob pouts and asks querulously: what else are women for? Now beauty "is its own excuse of being," but there are other excuses as most men know, and when the white world objects to black women because it does not consider them beautiful the black world of right asks two questions: What is beauty? and Suppose they are ugly, what then? Other things being equal we all, black and white, would prefer to be beautiful in face and form and suitably clothed; but most of us are not and one of the mightiest revolts of the century is against the devilish decree that no woman is a woman who is not by present standards a beautiful woman. This decree the black women of America have in large measure escaped from the first. Not being expected to be merely ornamental they have girded themselves for work, instead of adorning their bodies simply for play. Their sturdier minds have concluded that if a woman be clean, healthy and educated, she is as pleasing as God wills, and far more useful than most of her sisters. If in addition to this she be pink and white and straight-haired, and her fellow men prefer this, well and good; but if she be black and brown and crowned in curled mists, this is surely the flimsiest excuse for spiritual incarceration or banishment. The very attempt to do this in the case of Negro Americans has strangely overreached itself. By so much as the defective eyesight of the white

world rejects black women as beauties, by so much the more it needs them as human beings - an enviable alternative as many a white woman knows. Consequently for black women alone as a group, handsome is that handsome does, and they are asked to be no more beautiful than God made them, but they are asked to be efficient, to be strong, fertile, muscled and able to work. If they marry they must as independent workers be able to help support their family. For their men are paid on a scale that makes sole support of the family impossible. On the whole colored workingwomen are paid as well as whites for similar work, save in some higher grades, while colored men get from one-fourth to three-fourths less than white men. The result is curious and three-fold: the economic independence of black women is increased, the breaking up of Negro families must be more frequent and the number of illegitimate children decreases more slowly among them than other evidences of culture increase, just as was once the true in Scotland and Bavaria. What does this mean? It forecasts a mighty dilemma which the world of civilization, despite its will, must one time frankly face: the unhusbanded mother or the childless wife. God send us a world with woman's freedom and married motherhood inextribably wed! But until he sends it, I see more of future promise in the betrayed girl-mothers of the Black Belt than in the childless wives of the

North; and I have more respect for the colored servant who yields to her frank longing for motherhood than for her whiter sister who offers up children for clothes. Out of ... sex freedom that today makes us shudder will become in time a day when we will no longer pay men for work they do not do for the sake of their harem; we will pay women what they earn and insist on their working and earning it; we will allow those to vote who know enough whether they be black or female, white or male, and we will mend race suicide not by further burdening the overburdened, but by honoring motherhood even when the sneaking father shirks his duty.

"Wait till the lady passes," said a Nashville white boy.

"She's no lady - she's a nigger," answered another.

Some few women are born free and some amid insult and scarlet letters achieve freedom, but our women in black had freedom thrust contemptuously upon them. With that freedom they are buying an untrammelled independence; and dear as the price they pay for it, it will in the end be worth every taunt and groan. Today the dreams of the mothers are coming true. We have still our poverty and degradation, our lewdness and our cruel toil, but we have too a vast group of women of Negro blood who for strength of character, cleanness of soul and unselfish devotion of purpose, is today, easily the peer of any group in the civilized world. And more than that, in the great rank and file of our five million women we have the up-working of new revolutionary ideals which must in time have vast influence on the thought and action of this land. For this, their promise and for their hard past I honor the women of my race - their beauty, their dark and mysterious beauty of midnight eyes, crumpled hair, and soft full-featured faces, is perhaps more to me than to you because I was born to its warmth and subtle spell; but their worth is yours as well as mine. No other women

on earth could have emerged from the Hell of force and temptati[illegible] that once engulfed and still surrounds black women in America with half the modesty and purity and womanliness that they retain. I have always felt like bowing myself before them in all abasement searching to bring some tribute to these long suffering victims, these burdened sisters of mine whom the world, the wise white world loves to affront and ridicule, and wantonly to insult. I have known the women of many lands and nations known, and seenand lived beside them, but none have I known more sweetly feminine, more unswervingly loyal, more desperately earnest and more instinctively pure in body and in soul than the daughters of my black mothers. This then, a little thing, to their memory and inspiration.

---ooOO()OOoo---

THE NEGRO

Handwritten draft of "The Coming of Black Men"

Chapter II

The Coming of Black Men.

The pre-historic movements of men can only be guessed at today, but anthropological research is slowly making some things known. From some center in southern Asia primitive man began to differentiate in two directions: toward the south appeared the primitive Negro, long headed and curled flattened hair follicle; he spread along southern Asia and passed over into Africa where he remains today as the real dwarfs of the center and the Bushmen of South Africa.

Northward and eastward primitive man became shorter and broader headed and straight-haired and spread over eastern Asia forming the mongolian type. Either thru the intermingling of these two types or as some prefer to think by the direct prolongation of the original primitive man, a third intermediate type of human being appeared with straight hair and cranial measurement intermediate between the primitive Negro and mongolian. All these three types of men intermingled and flood each

and also developed variations according to climate and environment

Much speculation has accordingly been ripe concerning the origin of many distinctly differentiated modern groups. The older "Aryan" theory assumed the migration and Empire of one dominant Asian race of Caucasoid congeners to whose blood and influence all modern culture was due. To this "white" race, Semitic Asia, a large part of Black Africa and all Europe was supposed to belong. This "Aryan" theory has been practically abandoned in the light of recent research and it seems probable now that Europe was settled by Man from the primitive African stock evolved in Asia the Semites and later in Africa, the Mediterranean with the exception of
race which formed the dominant Negroid characteristics and the modern Negroes. The blue eyed light haired Germanic people arose as a modern variation of the mixed peoples produced by the mingling of these Ancient Human elements. The East moved on this ~~footing~~ developed line of course right

30-1-45

yet been found and there is still much to learn & explain. But it is certainly known today beyond doubt that the so-called Hamites of Africa, the Somali and Abyssinian, with their curly and frizzle haired subordinates of North and East Africa are not "white" men in any possible sense of that much overworked racial designation. They are plainly Negroes if we use that word in any but a needlessly narrow & unscientific sense, with longer or smaller modifications of Semitic blood. The Semites too show their Negroid ancestry in hair and head form.

The early human history of Africa therefore may be reconstructed in some such way as this

30-1-46d

Primitive man probably entered Africa from Asia some 50,000 years ago, The ~~Negro sub species may have originated in~~ coming from passing sea-ways to the regions of the great lakes. the Indian peninsula. The dark-skinned, spiral-haired men ~~then seem to have~~ had wandered eastward as well as westward. They entered Burmah and the islands of the south seas on the one hand; on the other hand they can be traced through Mesopotamia, where they gave curly-hair and a Negroid type to Jew, Syrian and Assyrian. In Arabia perhaps the Negroes divided, sending one stream into Europe by way of Syria. Its traces are manifest not only in skeletons but in the brunette type of south Europe. The other branch proceeded to Egypt and tropical Africa.

30-1-46d

This primitive African was ~~probably~~ not an extreme type; one may judge from modern Pigmy and Bushmen, that his color was often reddish or yellow, and his skull was sometimes ~~often~~ round like the Mongolian. He settled possibly on the broad regions between Lake Chad and the Great Lakes, and remained there long stretches of years.

After a lapse of perhaps 30,000 years came a further migration of Negroid peoples whom we sometimes designate as Hamites or the "Mediterranean Race." These in turn developed on the one hand into the Semites, and on the other hand, they mingled with the primitive Negroes and became the various Negro tribes of to-day.

As we near historic times, the migrations of men became more frequent, from Asia and from Europe, and in Africa came movements and minglings ~~commingling movements~~ which give to the whole of Africa a distinct mulatto character. The basal proto-nigritian

30-1-47

stocks were "mulatto" in the sense of being not widely differentiated from the dark original Australoid stock ~~that became the white man~~. As the earlier yellow Negro developed in the African tropics to the bigger, blacker type, he was continually mingling his blood with similar types developed in temperate climes to sallower color and straighter hair.

30-1-482

We find, therefore, in Africa to-day every degree of development in Negroid stocks, and every degree of intermingling of those developments both among African peoples, and between Africans, Europeans and Asiatics. The mistake is continually made of considering these types as transitions between absolute Caucasians and absolute Negroes. No such absolute type ever existed on either side. Both were slowly differentiated from a common ancestry and continually remingled their blood while the differentiation was progressing. The prehistoric Negro is mulatto in color or hair or both, and no absolute Negro type in the popular conception of the idea ever existed. From prehistoric times to our day, Africa is humanly the land of the Mulatto. So, too, was earlier Europe and Asia, only in these countries the Mulatto was early bleached by the climate, while in Africa he was darkened.

The curious intermingling of men in Africa is reflected in the distribution of languages. Roughly speaking, Africa can be divided into two language zones; North of the fifth degree of North latitude is the Zone of Diversity, with at least a hundred groups of widely divergent languages; South of the line there is one minor language (Bushman-Hottentot) spoken by less than 50,000 people, and elsewhere the predominant Bantu tongue with its various dialects, spoken by at least fifty millions.

30-1-486

It is interesting to note that those very scientists who have depended on language to prove the ethnic and cultural unity of the mythical "Indo-germans" have tried to make ~~this typical~~

Egyptian culture ~~asides~~ decide the fact that it is difficult to connect the Egyptian language with ~~any~~ Asiatic tongues. Lepsius assumed that Bantu was the original Negro tongue; that the Egyptian and Hottentot were ~~colonies~~ colonies ~~offsets~~ tongues originating in Asia and that the advance of the Bantus cut these two speeches in twain left mixed dialects behind and spread the Bantu speech in the south. ~~Since~~ ~~these records to~~ If the Egyptian and Hottentot tongues came from Asia even in prehistoric times they left no apparent trace and as Sergi maintains "everything favors an African origin". (p 100)

Ethnologically historic times it seems clear that the second migration of Negroes ~~Asiatics~~ type from southern Asia settled somewhere around the great lakes and ~~abroad~~ or drove back into forest and desert the primitive yellow ~~and~~ red Negroes were evolved the modern Negro; during that evolution the race sent offshoots down

30-1-49

the Nile valley. ~~and along the shores of the~~ He were developed primitive Ethiopian civilization and gradually through contact with the Semites the culture of Egypt.

The Negroes also expanded westward straight across the continent pushing the primitive ones into the forests and southward. Centers of higher culture began to appear along the gulf of Guinea and ~~pushed back~~ pushed back eastward meeting Egyptian influences at Lake Chad.

Later the Negroes expanded southward along the Indian ocean and with doubt began the civilization which culminated later at Zymbabwe and may be faintly traced across the Kalahari desert. ~~Recent~~

Hemmed in between all these influences a new like group of Negroes in central Africa began to press for room. They dwelt at the barrier of Egypt at Ethiopia; without doubt they pressed hard on the ~~Eg~~ along Yoruba and Benin on the west. Perhaps it was the expansion of this latter kingdom into the Congo Valley. ~~That~~ started the trade

30-1-50

of warlike barbarians advancing south and eastward. Calling themselves proudly The People (la Bantu) these tribes skirted slowly the Congo forests being held back by natural difficulties or perhaps by some organized power emanating from the West Coast. Down past the great lakes passed the Bantu nations gradually conquering every thing before them until they had overcome the resistance on the east coast and had curled back with the Congo valley down in South Africa and back again to the Zambesi.

30-1-51

All the southern peninsula thus became Bantu in language and culture Joined the with the Bantu breed had whom the ancients of Ethiopia and the ~~Arabians~~ semitic Himyaites of the highland Coast eventually ~~mixed~~ broken groups and ~~daughters~~ tribes of Negroids of mingled Bantu, ancient Negro and semitic blood

Meantime ~~in the 2nd century, A.D.~~, from the Northern shores of Africa influences began to creep through the desert wall. Greeks Phoenicians and Romans penetrated to Nigeria and left and took away far reaching influences. Perhaps some influences? Greek culture reached even the Gulf of Guinea by way of the Niger; the Sahara desert paths brought Negroes to Carthage and the Mediterranean coast and carried trade to Negroland. By Zanbu and perhaps Grecian influences were also left and successive movements of Negroes westward across the broad Sudan ~~belts~~ stimulating influences as far west as the Atlantic and perhaps planted the cross before the crescent on the Gulf of Guinea.

~~Negro tribes have been mixing~~
~~freely in the travel and barge movements~~
~~there were in the Mediterranean armies~~
~~that conquered North Africa~~

30-1-52

~~The influences of culture of the west and of Egyptian influences early began to stimulate progress in the western Sudan~~

The influences of these trade routes added to the those of Egypt Ethiopia Benin & Yoruba stimulated centers of culture in the central & western Sudan and the great paths of European & African trade began to develope. Negro soldiers served largely in the armies that enabled the Mohammedans to conquer ~~capture~~ North Africa and Spain. Eventually beginning in the 10th century Islam crept across the desert into Nigeria. The new religion found an excellent culture & it came not a conqueror but as an adapter and reform. Civilization received new impetus as a wave of mohammedanism swept eastward reaching the ~~western~~ great kingdoms of Mali the Songhay, Bornu and the Hausa States.

The older culture was not overthrown and took a great many things into itself

and manual force [illegible] It gave stubborn battle for the older culture for seven or eight centuries

Dictation 30-1-54

When it was that the Negro race of Africa developed in its most unmixed form. In the ancient world Africa was no more a slave supply ground than Europe or Asia and the slaves of Greece and Rome were more largely White than colored. The slaves of the Egyptians were mixed Negroes, but so were many of their nobility and some of the Pharaohs. Here for geographical and economic reasons chiefly drawn from Africa & Asia; & later under Mohammedan influence there came Asia a more distant demand slavery as a system became re-created a new base of life and white Negroes Negroes became of prime value and thus was became the domestic slavery of Africa furnished a supply of slaves which earned and came from Europe & only in limited quantities from Asia for economic & political and not racial reasons: African industry shall rested on the family & the domestic slave trade [illegible]

and Europe had reached a system of Slave serfdom.

PAN-AFRICA

THE STORY OF A DREAM

CHAPTER I ACCRA

For now a month I have lived in Accra, the capital city of the new independent republic of Ggana, West Afriaa. To this fairy land, I was transported by way of Prague and Rome, both fitting fables for this transmigaration of souls. In Prague which I had seen previously in I893, I950 and I958, I met the presient who writes books, the minister of education and culture and the rector of Charles University, founded 300 yers before America was discovereved and which in I958, gave me an honorary degree in a ceremony I shall never forget. In I960 , the minister of culture showed me the Spartakade, the Czech festival which comes every five years. Sixteen thousand girls from every corner od Czechoslovakia danced in intricate pattern and colorful uniform before fifty thousand spectators; and then sixteen thousand boys; and then sixteen thousand adults, It was a rare spectacle of discipline and unity of joy and plan

Then over Vienna we reached Rome. I had not seen the Eternal City since I893, when I and a young Englishman, touring as students from Berlin, were stoned in the Forum and called "Franchesi"! Rome was not built in a day and cannot be seen in a day but a day was all we had. We saw the Forum now buried in the vast encroaching city; it seemed but ragged reminiscence; we saw St Peters and its garish colors amid mighty memories and vast plaza we saw the Colloseum, that ghost of the past and we saw the city Mussolini built, that ghost of an unbelivable present.

At midnight we flew to Africa. Over ~~Casablanca~~ Tripoli and the Great Sahara across we flew, and over Kano, all in darkness -- Kano where my dear friend , Colonel Young died of what was really suicide when the land which he so selflessly served viciously rejected his service. At last we came to the Gulf of Guinea where 200 years ago (or was it 300?) an ancestor of mine was probably stolen by a Dutchman and dragged to New York, where as Tom Burghardt or some father of his, he worked in the Berkshire valley of Massachusetts, fought for his freedom in the Revolution and through his great granddaughter brought me into this curious world.

Accra has grown from a trading "castle" built by the Portuguese in in the Fifteenth century into a city of 300,000. It clustered in huts with windin paths next the sea, thenextended (a marketplace and a) as a trading center, a haunt of fishermen and at last capital of a profitable British colony. Finally long streets stretched to the countryside, with circles and avenues name after African lands and curved roads ~~with~~ leading to nests of surburban homes amid trees and flowers. Its inner purlieus are crowded with sidewalk salesmen and especially women; great departmentstores have been built and offices for government officials; motor carsjam the winding thoroughfares and strange tongues with British English mingle on the streets. It is an overgrown village laid out to become a metropolis, with arch and fountain; house of parliamen and supreme court, Unilevers, Kingsway and the African marketplace overlying and under carbody ~~threading~~ ~~through~~ all.

39-IC-33

We came to witness the last act (or the first ?) of a great world drama. An early center of the African slave trade to America had become a colony of the British Empire, set down by Guggenheim as an example of and then suddenly in a whirl of revolution, yet without blood, being before our eyes transformed into ~~xxxindependentxxxxxxx~~ self-ruled colony in I957 and today into a republic, shorn of a queen, and yet in the British Commonwealth

The leader of all this was a young man whom I met in Manchester, England, fifteen years ago. He urged me to come and see the first fruit of his effort, but my country suspected me of too much sympathy with Socialism of Russian Communism and refused me a passport, but sent Vice President Nixon instead. In ~~xxxxxxx~~ I958 the nation unchained me and my wife and I had a miraculous trip to the world of Socialism from Prague to Moscow and Tashkent to Peking. My wife went also to Egypt and the Sudan, to Nigeria and theAll-African meeting in Accra in I958 There she read my message to Africa while I lay in a Soviet Sanitarium, not sick but guarded from ~~being sick~~ illness

After our return, our passports after a hesitation of months were cancelled for our crime of openly and joyously visiting China. We were about to content ourselves to stay home indefinitely, when here came two invitations: to the Spartakiad in

Chechovakia and again from my friend Kwame Nkrumah in West Africa. We appld for new passports; Nkrumah cabled the State Department, the Ghana consul vitd the State department and others pinted out the rich investmet which American Big Busines hoped to place in Africa. We got three-year passports but were asked to promise to visit no country with which the United States has nd diplomatic relations. Since we are sure thatthe greatest nation in the world cannot long be kept from recognition by the United States, we signed the promise

We were not in time to see the complete ceremony of transposing from white Britain from rule in Ghana and in place setting up Black Africa. But we saw its essential parts and it was a work of art. It moved with every at British good form, with solemn ceremony and correct dignity. With all pomp and circumstance Lord Listowell, in gold braid and plume, Her Majesty's governor of Ghana, was was dined, presided as parliament was prorogued, escorted to his plane by the new black President of the Republic of Ghana in robed in kente cloth. On July first the new Predident, is inaugurated. He is Preceded by the Golden Sword of State, police criers and drummers, and the Army, Kwame Nkrumah is sworn in by the black chief justice, Sir Arku Korah and and the people shout their approval as the national anthem is played. There is a ceremonial parade, firewoeks and the Flame of Freedom is lighted.

All this we came too late to see but on July second after our arrival, the First Parliament of the Republic of Ghana was opened and we were there. All the distinctly British paraphernalia were gone. There were no wigs, God was not asked to save the Queen and there were few white officials

39-IC-34

~~THE REPUBLIC IS INAUGURATED~~ 4

descended & knelt & carved on a the Golden Stool

There was a certain magnificance in ~~it all~~ the ceremony -- the echo of ancient splendor; carving stood out on walls with stately ~~glory and~~ splendor; and over all was color: the riot of every earthly tint; the roar of crimson, royal darkness; a golden chair and its unveiling: yellow and purple, green and blue, white and orange-- ~~crown of leaf and plate.~~ A chief sat in front of me, with a crown of leaf and plate, wreathed in crimson and gold and regally sitting on a tufted cushion. Beyond over the audience lay white and cream lace, necklaces of pale, pure gold, turban and fez now the massive mace-bearer was passing, a big and stately man entered majestically with purple greaves. ~~Then~~ the trumpets trembled in partial tones, bits of promised music from the legends of chiefs the drums rolled in perpetual, irregular rythm. Red-coated soldiers stood on guard sceptres and batons, figures and forms; scroll and triangle, line and dot,, interlaced curve and square. Over all lay a mist of gold encrusted with crimson and black. Everywhere were comely features, erect carriage, a ~~distinct~~ British pattern but behind all the African pattern, stern and eternal. The white ~~gowns~~ robes of the Moslems floated about and in the seats of Parliament sat a hundred members, robed and gowned, eight of them women, one a son of the great Casely-Hayford, one who married Cripps daughter and one president of the Republic and a right honorable Britsih Privy Councellor With all the pomp and circumstance, the ceremony was simple. There were no wigs and igsignia of nobility save that of chiefs. Without the portic, a Parmount Chief, crowned and gowned in gold danced before his gods and poured libations ~~while two~~ tall, full-bosomed women, black and proud floated around him, ~~Within~~ In simple decorum, Nkrumah in his kente-cloth robe, wlked to the rostrom and seated himself in the carved and gold-crused ceremonial chair. Then he stood and outlined a socialist state ~~while~~ as Parliament cheered. Again the trumpets trembled and blared, the drums revelled ~~and rolled~~ and the national anthem of new Republic roared in the throats of thousands. It was a day never to forget. For here a marriage of British custom with ancient African culture had been erected slowly relentlessly, without pause or hesitation a new nation , whose life was so intertwined with international trade and manufacture that it was at once an integral part of modern capitalism and yet a socialist state based on a co munism ~~axxxxxx~~ much older than the American slave trade. It was a fantastic evolution led by Kwme Nkrumah.

CHAPTER II OF DREAM AND DEED

There is a dangerous dichotomy in modern thought which must be recognized and reconciled or we will never ~~reduce~~ coalesce etihcs and science to one unified world. What has a Dream to do with the future? Science says Noting, it but unsubstantial shadow floating along side Fact. Everything answers Ethics for it is the map of the coming world; drwn right a it guides us to Good; drawn wrong and Bad it enthrones Evil and destruction. These two interpretations, instead of admitting their fundamental contradiction, carry on as though they spelled no ~~inherent contradiction~~ incoherence: Science admits no happening which was not included in the Past and birthed by unalteralterable law, while "eligion worships all-powerful Will who makes of earth and man whatever man and earth wish to be.

Mankind must reconcile this contradicgion or give up logical thought ~~thought~~ or purposeful deed. To This the scientific method of the Nineteenth Century points the way to ~~acco plsh:~~ assumption and test. I beg to adduce one example, a small one as history and experience go, as well as I know. As a little brown boy born in a white skinned New England, my black mother's family told me that they were African. But of that Africa which was their motherland my schools and surroundings taught me almost nothing. There was a map of Africa in my geography which I early learned to draw. I early knew Gibraltar, the Nile, the great Gulf of Guinea and the Cape called Good Hope. I saw pictured of alleged Africans but they had but faint resemblance to my grandfather Othello. In my history books there was no story of Africa, only ~~save~~ Egypt and Egypt was and was not in Africa, depending on whether I believed the map or the written text. Apparently I could take my choice and I did.. I built an Africa of mighty folk who happened to be black of skin but just as human as ~~a~~the others who were brown, yellow, red or pink. This I knew because I knew black folk. My mother was black and my cousins and many strangers from the world without.

Yet as I grew to manhood this knowledge of mine was called a dream by all the world about me, including, strange to say many if not most other folk , as dark or darker than myself. But this dream of mine I hugged close to

my soul, vowing that if it was not true it would be true if any way my thought and muscle could make. Today in I960, with a sort of mad rush my dream is becoming true, and I stand almost frightened at the fact and method of this happening I try of course not to distort or exaggerate the facts. All this is not the result of my own little dream, it is the accumulating and deam of thousands of minds and milions of sweating backs and gripp ng hands. It is not yet a complete accomplishment, but rather the dawn of a shadow of a finished fact. But it no longer remains a deam, it has already become a measurable scientific fact.

39-12-37

This as I sence it is the story of its developement. In I900, as I taught at A Negro college in the United States, Atlanta University, I had entered on a systematic study of the Negro race, especially in the United States , but also in the Americas and in Africa itself. This study had begun at the University of Pennsylvania in 1896 and carried on for I8 months resulting in one of the first American social studies of a group of of developing working people. At Atlanta for ~~the next~~ I3 years this became a programme of I00 years study of the Negro race and as part of this study I made a series of charts of Negro progress in A merica which gained a grand prize at the Paris Exposition in I900. The printed reports of my studies had becom known in Europe and on my way back to America. I was invited to take part in a "Pan-African Conference" in London, called by a colored West Indian barrister, H. Sylvester Williams. Of Mr Williams himsllf and his ideas of Africa I never learnd much nor did I know whence he got his use of the term "Pan-Africa" which I then heard for the first and liked. Probably Mr. Williams had in mind some consideration of missionary work, for he invited members of the Colenso family and other missionary folk.. It happened however that I was beginnig to get some ideas of Africa's future from my studies and my reading of the results of the Congres of Berlin, Stanley's travels and the Congo Free State. I was made secretary of the conference and wrote the resolutions

Bishop Alexander Walters, a prelate of the African Methodist church

one of then the most powerful Negro organizations, and would have done something with this new responsibility, had it not been for new responsi ities which piled on him, including the presidential of I9I2 and the First World War. My hands too were full: lynching and mob violence spead in America; Booker washington doctrines of apesement spread; I criticised him in my book "Souls of Black Folk" in I903, organized the Niagara Movement in 1905 and in I9IO gave my study of the Negro and became chief of propaganda in the New NAACP in I9IO. In I9II I returned to my interest in Africa as secretary for the United States of the Races Congress ~~afxi~~9which met in London. This meeting of persons of all races including Africans, West Indians, East Indians, Europeans and Chinese, clarified my ideas. Due in part to the illness of Sir Harry Johnson I took a leading part and began to think of Africa as the home of free, thinking and acting men. But alas, while we were still in session, that German warshipsailed into an African p port and World War began. Free Africa was the child of forty years of violence, murder and destruction.

39-1C-38

CHAPTER III The FIRST PAN-AFRICAN CONGRESS

Thhe decade from I9IO to I920, in the United States was the era when black Americans arose from the struggle of emancipation, and the of Reconstru ction of democracy after war and awoke to a new, long and fierce struggle to become modern men and join in the re-birth of Africa. First came organization and the Crisis a monthly which I ed ted for a quareter of a century to set the new objects of a new people. Then came a war with its question as whether black Amer- icans ~~ar~~ were citizens fighting for a country which was theirs or cheap labor to be used for profit. The result was compromise which looked like victory but actually sent Negro soldiers to France as stevadors to move the materia which the Allies needed and from the sale of which the Unitd States reap a millio dola s a day profit. A few black soldiers had to be sent along with these workers, along with 700 Negro officers, whose treatment aroused black America and gave me a chance to visit France right after the Armistice and investigate

I conceivd a bright idea. I recalled my dream of Africa. I wrote the harried President Willion and suggested that the German colonies in Africa become a new free Africa, in which Africans had some voice in its government. Wilson did not answer my letter but it came to the attention of the peace congress of Versailles and my further action emphasized my suggestion. I tried to assemble a "Pan-African Congress in Paris on my arrival inthe winter of 1918.I place the proposal before such Americans as I knew. They were of one mind: the thing was impossible. Parsi was still under marshall law; this was a matter of high politics and an merican negro had no right to openits discussion; I turned to Colonel House the President's alter ego. He decided that it would do no harm to listen to me, depite my race and clor. He gave me a courteous hour and promised to give the matter some attension. He probably referred it to one of the committees on peace, but I heard no more from him. Then I took the war into Africa. I knew how much France had put dependence on black troops. I knew that one African held a place near cabinet position and i soon learned that Blaise Diagne, a black Senegalese had been instrumental in bringing 700,000 black troops, "volunters" as as those were called whom the chiefs ordered to go. It was these men who stopped the first onsl aught of the Germans. I heard that stoty of the black battalion which for the first time in their lives faced the thunder of german artilley on Flanders field they raised the gribzal war cry and the tempest of lead swept them down. They cried again and again the blod bathed thunder rolled; again and a gain the war cry sounded until the silence found no living black man on that field. France shuddered but it could never forget.

39-12-39

I went to Diagne and he received me with interest and vivid curiousity He was glad to hear of Africa overseas. Of course he said almost before he thought, you can meet and talk. This is a free land. I will speak to Clemenceau It was more difficult than he had thought. Who was this Du Bois, The Tiger asked . What did he represent, what power was behind him. The discussion dragged on. December and January rolled by, with chilly, damp weather. But I haunted Diagne and he was ashamed to fail. What was there to fear? Few would attend this meeting

Outsiders could get no visas, and those there would be under the watchful eye of the Co,onial Office and of Disg e himself. Moreover the gesture would apea appease Africa and Afriaca was showing signs of consciousness. At last, in ebruar permission came with advice: Hold your Congress but say little about it; meet quietly, but go ahead. I was elated and my few white American friends amazed. But I soon realized that I had not gained much. Already came the news that the American Secretary of State had announced that the Congress would not take place and refused passports to those who hzd applied. From England came the news that the Secretary of the ~~xxxxxx~~ Abroniges Protection Society wold not be allowed to send its secretary and the old abolition forces could not be represented. Of course black Africa would be kept away save those aleady i n Paris. But I kept gr grimly at work. There was a nucleus of Negroes in Paris: a few American Negro troops; an American consul at and his willing wife Ida Hunt. Some other West Indians domiciled in Franceand others of Negro descent. Altogether we mustered I9 persons who enrolled at the Grand Hotel on ebruary, I9I9, under the chairmanship of Blaise Diagne, with me as secretary and the French Secretary of Colonies in watchful daily attendance. During this time my ideas on Africa and its future had broadened and clarified. My resolutions were changed slightly in some debate but on the whole went through virtually as I wrote them The world listened and I went nome tired but triumphant.

39-IC-40

CHAPTER IV THE YEAST WORKS

The First Pan-Af ican Congress , small and relatiely unimportant as it was, had three major results; first it started in Africa itself and especialy among th leading black intelligentia, a movement to organize for eventual shring in the government of colonies. Second in the West Indiees there was revived along ex- i ste t demand for self-rule which hd triumphed in blood in Haiti in the I8th century. Nealy every island had its movements of varying sorts but in Jamaica there appeared after the First World War, Marcus Garvey, first as head of a small industrial school and then as leader of an adventure in commence and trade. Garvy sensed the economic develpe of the West Indies and wanted Negroes to go into busine

on his own hook and take over at least part of the inter-islamd trade. There was in Africa, and particularly West Africa a notable set of intelligent Africnas. Many were educated in England and msot were British in culture and ambiideal.They had small regard for colored Americans s and regarded the African chie chieftainship with som disdain. They had no idea therefore xx of joining an American Pan-African movement, especially when British politics and business advised against it.They had long sought to be recognized as leaders of a rising Africa, but the colonial officials outwitted them by forming alliance with the chiefs and by securing controllof the chiefs being able to rule the colonies with considerable sucess with the educated Negro leaders outside the ropse. After the first Pan-African Congress,it occurred to many of the African intelligentia first to use their tribal bonds to ally themselves with the chiefs and secondly to take real leadership xxxx of the tribes and force the imperial powers to grant the natives a greater share in government control.

39-12-41

Leaders and scholars like Casely -Hayford of

therfore in 1920 secured the co-operation of a number of powerful chiefs, and called a West Avrican Congress at I was not invited not being a British subject and somewhat suspect by the British rulers ans having revolutionary objects. The West African Congress was of a hibgh order and eventually forced the government to grant tne natives a substantial start toward self-government. Thier argument for African democracy was a classic. Othe movements toward self-rule wer encouraged by this congress and by my Pan-African movement.

Garvy in the West Indies was a demagogue. His education was not broad and he was careless in his morals. But he was a born leader of men in an environment where leadership was sorely wanting, The Jamaica leaders were mostly mulattoes, who aped the British and despised tne blacks. Garvy became leaderx of the black masses and srirred them to frenzy by praisig black blod and slandering bastards. Moreoeer he attacked the basic problem of poverty and unemployment. This brought him to New York, where thousands of West Indians lived and where many had prospered. Here he formed his Negro Improvement society,

Started a newspaper and had his attention turned toward Africa by the pan-African movement. He attempted sevral commercial ve tures including the Black Star steamship line. He had no talent for businesnor experience and in 11 of them failed miserably. But in his propaganda for an Africa ruled by Africans, he was amazingly sucessful. He never visited Africa and knew little of conditions there among natives or colonists but his exhortations for Africans to have voice in the rule of Africa spread wide and came to the ears of many young blck men. Garvy himself wasted funds, ranted and boasted and finally ran counter to American law by selling passages on non-existant boats and was arrested He charged that I and other American Negroes were persecuting him but in this he was wrong. Only hisown rhodomontade betrayed him into the hands of whites who began to fear him. He was deported to Jamaica and finally died in London

CHAPTER V. THE SECOND PAN-AFRICAN CONGRESS

After the First Pan-African Congress in I9I9, I began to plan a second for I92I. It provrd a d fficult task. First of all the NAACP which had suported the first congress, was no longer willing to continue sponsorship. As one of our leading directors said: we have enough problems of our own in America without going to Africa to find and settle others

24-21-63

THE PHILADELPHIA NEGRO

Draft fragments, Chapters 3 and 16

[FROM CH. 3]

Few States present better opportunities for the continuous study of a group of Negroes than Pennsylvania. The Negroes were brought here early, were held as slaves along with many white serfs. They became the subjects of a protracted abolition controversy, and were finally emancipated by graddal progress. Although, for the most part, in a low and degraded condition, and thrown upon their own resources in competition with white labor, they were nevertheless so inspired by their new freedom and so guided by able leaders that for something like forty years they made commendable progress. Meantime, however, the immigration of foreign laborers began, the new economic era of manufacturing was manifest in the land, and a national movement for the abolition of slavery had its inception. The lack of skilled Negro laborers for the factories, the continual stream of Southern fugitives and rual freedmen into the city, the intense race antipathy of the Irish and others, together with intensified prejudice of whites who did not approve of agitation against slavery--all this served to check the development of the Negro, to increase crime and pauperism, and at one period resulted in riot, violence, and bloodshed, which drove many Negroes from the city.

Economic adjustment and the enforcement of law finally allayed this excitement, and another period of material prosperity and advance among the Negroes followed. Then came the inpouring of the newly emancipated blacks from the South and the economic struggle of the artisans to maintain wages, which brought on a crisis in the city, manifested again by idleness, crime and pauperism.

Thus we see that twice the Philadelphia Negro has, with a fair measure of success, begun an interesting social development, and twice through the migration of barbarians a dark age has settled on his age of revival. These same phenomena would have marked the advance of many other elements of our population if they had been as definitely isolated into one indivisible group. No differences of social condition allowed any Negro to escape from the group, although such escape was continually the rule among Irish, Germans and other whites.

34-2-84

[Note – to be appended to Chapter XVI, unnumbered.]

A word ought to be said as to the practical aspects of drawing the "Color-line". All men acknowledge that discrimination based simply on race or color is a concession to barbarism. Nevertheless it often happens that philanthropic enterprises come face to face with the alternatives of either excluding Negroes from the benefits of the enterprise, or of seeing their efforts wholly or partially fail. Under such circumstances all that can be asked is that those upon whom the decision rests fully realize the gravity of their choice. Sometimes, without doubt, it is the least of two evils to exclude Negroes; but it is certain that the temptation to do this is weakly yielded to at present far more often than is necessary or decent. Whenever the color-line is drawn simply to avoid unpleasantness or "trouble" it would in most cases be far better to give up the enterprise than to perpetuate an indefensible wrong.

30-1-57

Color-discrimination can be based on five grounds: (a) Difference in the social condition of whites and blacks; (b) Advantages of group action (c) Deep-seated, inherited prejudice; (d) Fear of public opinion; (e) Whim.

(a) It may be in certain localities that the Negro population is by training and condition in no

respect suited to take advantage of opportunities which the whites would grasp and profit by. In such cases discrimination on account of color may at times ~~see~~ be justifiable; care must be taken however for it must be remembered that in few localities are the Negroes all of one homogeneous class; usually there are some above the average, and these very ones who need encouragement will usually be the ones whom the discrimination will influence most.

30-1-58

(b) Sometimes a proper degree of cooperation in work can be secured only by grouping together small numbers of persons with mutual interests ~~acquaintances~~ — as, e.g., children of the same neighborhood, men of the same trade, or persons of the same race or social class. Where this is the case it may be advantageous to put Negroes by themselves, Italians by themselves, etc. It is not always certain however that this method will bring the best results, and it should not be too eagerly seized upon as an excuse for discrimination against Negroes or foreigners or certain social classes.

(d) ~~There~~ The most baffling problem is that of the persons with deep-seated unreasoning prejudices against a particular class of persons. Some-

times it is against Jews, sometimes against Irishmen, but most frequently it is directed against Negroes. Such prejudices are usually inherited or imbibed during childhood and youth and often will yield neither to reason or religion. In such cases the choice lies between two evils: the one of giving up the enterprise, the other of excluding Negroes simply because of their race and color. No more unpleasant dilemma can be faced, and while the last horn is more usually chosen, it is unfortunately because in general the evil of such a procedure is not fully realized.

These four cases are the only ones where there is sometimes excuse for discrimination. Even in cases where the expediency is undeniable it must be clearly recognized that ~~some~~ great harm is being done. Moreover the fact that Negroes are being discriminated against must be stated honestly and openly, with no attempt at deception, and the grounds therefor candidly made known.

It may be hard to make such a plain statement, but a failure to do so is an additional injury and a lie: an injury to a proscribed people who otherwise will be supposed to be receiving help where they are not; a lie which gives an enter-

prize credit for what it does not do, and does not intend to do. Two or three of the most popular enterprises of Philadelphia are guilty of such veiled and # unknowleged discrimination against Negroes which is often unknown & then own directors and undreamed of by the benevolent public. There is no defense for such a crime

30-1-60

The remaining two ~~irrational~~ grounds upon which color-discrimination is based are never justifiable excuses. By far the larger part of the existant color-prejudice in the city is by no means of the inborn ineradicable sort, but is rather a fear of the opinion of prejudiced persons. Foreigners, ~~and~~ natives of the lower class, and the newly rich, have all seen Negroes so mistreated and held in so little consideration that they think it smart and respectable & ape their betters in this respect. Such prejudice is merely ignorance and must be met by firmness, reason and enlightenment. So too whimsical objection & the physical peculiarities of the Negroes, must as in the case of hunch-backs and red-headed people, be also met by common sense and appeals to the better self.

~~A careful consideration of cases of~~

THE APOLOGY

Three times during the last quarter century I have had glimpses of the Union of Soviet Socialist Republics. For more than four-fifths of the last hundred years I have lived in the United States of America. In 1926, for a month or more, I saw Moscow and the other chief cities of the Soviets from Leningrad to Kiev, and from Nijni Novgorod to Odessa. Ten years later in circling the earth I saw the Soviet Union from Moscow to Manchuria, over Omsk, Novosibirsk and Lake Baikal and thence to China and Japan. A third time in 1949, amid the twenty-eight marble pillars of the formar Hall of Nobles in Moscow, I looked into the faces of a thousand Russians from every p rt of the vast nation, and joined them in a plea for peace. I read the books of other visitors, Then I said, I must write a book. So this at last is the book I have written. And may men have mercy on my word.

CHAPTER I

A QUEST FOR CLARITY

Erastus Milo Cravath, first president of Fisk University, looked like God. Certainly like the God which the Congregational sunday school painted on my child mind. He was tall, a little stooped, with long white beard and silver hair. His face was misty, with lineaments like those limned by fifteenth century Italian painters; and his blue eyes hid beneath bushed brows, whence they gleamed, now stern, now sombre. Sometimes we students thought they twinkled; as when he earnestly asked the Lord, as he often did, to "forgive us for our short-comings;" we were convinced he referred to little Cummings, a fellow-student who was an imp.

I was just turned twenty when we five seniors entered the President's class in Philosophy: Tyndal, dignified but dumb; Lenora, sleepy but keen, with her long black Indian hair; Edmondson, then, elegant and scholarly; Mamie, cold, spotless and bitter; and I, the youngest and most unsophisticated. To me college was very serious business. I was especially thrilled with this course. At last I was getting at the inner meaning of Things and about to face ultimate Truth. I was weary of "elements" and "introductions" and second-hand comments and descriptions.

The new text said that we were to study the "Stream of Consciousness," without reference to Space and with no limits of Time. Needless to say that eventually I was in part disappointed. On occasion when we were apparently splitting consciousness into unrelated parts, I ventured to remind our grave teacher that the knowing Mind could not thus be limited in space; he answered

49-2-13

drily, "But it must be somewhere!"

One thing, however, that course of study did was to open vistas and resolves. I was going to know Truth. I was going to stop at no little college for colored folk in Tennessee; I was going to seek the best and largest institutions in the world until I knew what Life was and Why.

Good old Professor Chase, who taught everything called "science" and who always advised his pupils on ways of eventually earning a living, could arouse little response in me. I was not interested in earning a living. I was going to study; and when the Hartford Theological Seminary offered me a scholarship, I was almost rude. I did not regard theology as study nor was I going to be a minister. What I regarded thereafter as being Captain of my soul was of course mostly good luck; but sure enough next year, after graduation, I appeared at Harvard. It was not the Harvard of the Boston Brahmins nor the Hasty Pudding Club, of neither of which had I ever heard; nor had I the slightest interest in Yale games. I entered the Harvard of William James, Josiah Royce, George Santayana, Nathaniel Shaler and Albert Bushnell Hart and they gave me their friendship.

41-2-14

Josiah Royce, with his enormous red head and incomparable mind, led me to a conception of absolute reality through philosophic idealism. This derived of course from the thinking of the Master, Emanuel Kant, and with the young George Santayana, incredibly handsome, I read the Critique der reinen Vernunft and staggered somewhat uncertainly down to the vast Hegelian system of universal comprehension. But no mention was made of Karl Marx and his application of this interpretation of the development of thought and action to the daily work and wage of men. I am sure Santayana would have regarded this as unworthy of the high aims of Philosophy.

William James in the Fall of 1888 took over Ethics, while Palmer was on leave. By his pragmatic shift from absolute right and wrong to conduct

that would bring the best results, he guided my thinking from the absolute to the relative and from systems to human beings. He emphasized this by setting me to study mediaeval Scholasticism and its intricate but futile and sterile thinking; he advised me to avoid metaphysics if I could. I did so, and it was Francis Peabody's course on social problems which let new light in on my life interests. Peabody was a clergyman rather than a scientist and he was regarded rather lightly by the greater minds of the University. His course was orientated toward philanthropy and organized charity, rather than poverty-stricken and ignorant and ailing men. But it awakened me. I began to sense something wrong in the underlying organization of human work and income and something not entirely race prejudice. I began to hear of Robert Owen, Saint-Simon, Fourier and Proudhon and of their criticism of modern industry. But still there came no word of Karl Marx.

It is natural that one born in the midst of a particular social problem should tend to interpret all other problems in its light. In my earlier years then the problems of property, work and poverty were to me but manifestations of the basic problem of color. My family in its various branches were poor or at best middle-class: small landholders, slipping down to house servants, barbers, waiters and laborers. So far as they were not rich and influential, the cause to my youth was clear: color-prejudice, which denied good position and fair wage to Negroes. But I was honest enough to add to this, laziness and failure to save. For in our New England village of five thousand with surrounding farmers, there was no great disparity of wealth and what existed could certainly be explained in part by thrift and saving, and much of the rest by inheritance, which was the same thing a generation removed.

In after years I sensed there had been much before my eyes which I did not heed. There was for instance, a woolen mill in the upper town which not

49-2-15

only fouled the lovely Housatonic river but nurtured about it a wretched slum of poor Irish and German workers. The owners, two brothers, were rich and lived downtown in fine houses. I knew for I was chum of their two sons and played and ate in their homes. I saw no close connection between the mill and its slums, and their wealth, which could not be explained by shiftlessness and saving. And the fact that the mill children disliked me, did not occur to me as possibly their opinion of a toady to the rich. Nor was I really consciously a worshipper of wealth; but since my lack of means came from lack of thrift among my folk and lack of recognition of desert by whites, my path seemed clear: hard work and enlightenment.

When I went South college, I saw poverty which was still due to shiftlessness but that shiftlessness more certainly and openly the result of past slavery of the workers and present injustice. Race problems, therefore, to my mind became the main cause of poverty, probably because I saw little of the poor whites and envisaged them as carriers of color prejudice. Nothing in my college courses at Harvard led me yet to question the essential justice of the industrial system of the nation.

I did,however, after the first year, veer from my chosen field of pure philosophy. After looking into Scholasticism of the past and the pure Idealism of the nineteenth century Germany, I sensed the dead-end ahead and talked to William James. He said frankly, "DuBois, if you've got to study Philosophy, you will. But if you can turn aside, I advise you to do so." I turned aside. I had already begun to sense the path from Metaphysics to Science -- Münsterburg had just arrived -- and I had not only touched Geology and Chemistry, but been attracted by the new Social Sciences,and History under Albert Bushnell Hart, particularly the history of slavery.

I gained a conception of the universe not as static and eternal Truth as my youth conceived, but as ever changing and developing facts; and of law

49-2-16

not as statute legislation but of workable hypothesis regarding the Unknown, ready for restatement whenever new facts and a better hypothesis demanded. Hart was the antithesis of James: slave of infinite system; stickler for detailed "facts;" insatiable chronicler of deeds. He was antidote to my previous unlimited speculation; he kept me busy in tireless research; but he furnished me no broad guiding principles of interpretation for human life. I began restlessly studying and classifying.

I turned to Economics and under our keenest Economist, Frank Taussig, took his favorite course on "The Wages Fund." Here my mind began to rebel. Taussig was logical and learned. But he was dogmatic and wrong. He set up a series of assumptions on human nature and activities in the world and then argued from these assumptions to unquestionable laws of wages and profits. The reasoning was logical. The assumptions were not allowed to be questioned, for his learning refuted every attempt. At the end of his course the Ricardian Iron Law of Wages stood fast and eternal.

It was in my senior year that I took two other courses in my search for more satisfactory orientation for life work. One was conducted by Edward Cummings, a slim newcomer from European study, who instructed us in a new subject called "Sociology," which was not recognized by Harvard as a science then nor for twenty years after. When finally it was born in the Yard, it was under the midwifery of a white Russian opponent of the Russian Revolution.

In 1890, Cummings brought us the beginnings of metaphysical sociology, based on Comte and innocent of Marx. He talked of the Social Body, its activity, thought, and Soul. If I had not already been grounded in James, Royce and Santayana, this might have satisfied me. As it was, I was repelled and asked some disturbing questions in class, presuming on my high status as senior: where was the Ego back of this Soul? And could an unified and inte-

49-a-17

grated organism exist without an Ego? There was, of course, no satisfactory answer to such queries and after a year or so, Cummings went into the ministry as assistant to Edward Everett Hale. I remembered him because through his good offices I later borrowed Hale's gorgeous academic gown for my commencement part on "Jefferson Davis as a Representative of Civilization."

My graduate work with Albert Bushnell Hart was more successful in results. Hart was not a profound scholar, but he was a systematic collector of historic documents as facts, and he inspired his students to real work in historical research. His system of filing and array of file cases was imposing and tremendously reassuring. I started with a bibliography of the Nat Turner Insurrection and ended with a Ph.D. thesis on "The Suppression of the African Slave Trade to America," which became the first number of the then new Harvard Historical Series.

Hart expected me to become a collector and arranger of historical information as he was, and he would have opened many doors for publication, even to fighting the Color Line which might have hindered my work. But I had other ideas. I was dissatisfied with my study of the Slave Trade because it ended too abruptly and yielded too narrow a field for valid judgment of human action. If I could study what man had done, why not investigate thoroughly and scientifically what he was doing now and what he might do in the future? In other words, I was seeking a science of human action which could be used not only for studying the Negro Problem, but for all the problems of the poor and ignorant. I do not know just when or how clearly all this matured in my mind; but when I went to Germany in 1892, I was ready to study basic industrial and social reform.

It was in Germany that my first awakening to social reform began. My teachers, Adolf Wagner and Gustav Schmoller, were not radicals nor Marxists; but they were broad and inspiring men, and the atmosphere of Rudolf Virchow,

49-2-18

"rector magnificus," when I entered the University of Berlin, led me far. Nor did the frenzied diatribes of Von Treitschke fail to open my eyes to the connection between European imperialism and race hate. I can see him now -- huge, nervous, black coated, with swift, tumbling words; glaring, as it seemed, directly at me as he said, "Die Mulattern sind niedrig: sie fühlen sich niedrich!"

I became consequently particularly interested in the Social Democratic party; they were the greatest party in Germany but had been gerry-mandered out of their strength by Bismarck. But they were strong and growing and they emphasized the fundamental Marxian doctrine of the basic importance of labor in human culture. I attended their meetings and picnics and became strongly tinged with theoretical socialism. Moreover, I now actually saw poverty: in Germany, in Italy, in Eastern Europe; poverty which was not a matter of race, but of industrial organization. And when Race entered as a cause of social dislocation, as it did in Germany and Poland, it was a matter of white folk and not of the color line.

Returning to America in the Fall of 1892, I was plunged into the color problem again; but not with the same provincialism as before. For me social reform still meant primarily the opening of doors to black men, so that they might run the race of life in equal competition with the white. I was teaching at Wilberforce -- Greek, Latin, German, everything but the new Sociology which I yearned to help build as a science, when Booker T. Washington laid down his industrial program at Atlanta in 1895. I was all for it, save one thing: it must be implemented by the vote and not fatally ignore the suffrage; and the voter must be guided by trained minds.

After two years, came my chance to place my theories of race relations on a scientific basis, where practical statesmen could link them with the social uplift of all men. I got a year's chance to study the Negro in a

49-2-19

single Philadelphia ward. This work, which was lengthened to nearly two years, made, for me, the problems fronting the Negroes, clear and vivid and launched me on a scientific solution of broad social measurement, presenting facts to the world for use in any way men would. In such an ivory tower of social reform I went to a life work at Atlanta University.

But after thirteen years of effort, I found my life revolutionized; I found, on the one hand, hard as I tried to present carefully garnered and objective truth to the American world, this world would not support the effort; and that with the facts before it, lynching and lying in America increased and the Tuskegee idea, distorted from its defensible logic, was being used to close Negro colleges and make Negro labor a low-wage caste. Reluctantly I turned from science to propaganda and went to New York to help organize and conduct the new National Association for the Advancement of Colored People.

49-2-20

I attended a Races Congress in London in 1911, and addressed it. I began to give attention to the race tensions of the East. I remember advising a high-caste Indian who was consulting me, to make alliance between India and the new British Labor Party. He stiffened and said slowly, "I do not think we would like to be associated with dirty English workers." I think we all began to think of a new era of interracial comity, but even then tremors foretelling the First World War reached us. Back in the United States, I was compelled to surrender thoughts of detached scientific study of the race problem and go into the arena as a social fighter rather than as a scientific student. I deeply disliked this role and never proved demagogue enough to be successful as popular leader or public propagandist. But I did succeed in 1910 in establishing the Crisis magazine as an organ for my ideas, and it gained wide circulation. In 1915, I took a brief trip to Jamaica and for the first time saw the colonial problem face to face.

In New York, I was thrown with Socialists; among my colleagues in the N.A.A.C.P. were Charles Edward Russell, William English Walling and Mary White Ovington, all members of the Socialist Party; there were conservatives like Oswald Garrison Villard and liberals like John Haynes Holmes and Joel Spingarn, but I joined the Socialist Party in 1911, and from then forward began to regard the problem of race, more and more as part of the problem of industrial reform.

But two developments obscured my broader vision: first the extraordinary anti-Negro outbreak following the election of the first Southern-born president since the Civil War; for whose election I had left the Socialist Party in 1912 to fight; and secondly, the outbreak of the First World War, with race riots, lynching and burning; migration and hostile legislation; the appearance of the Negro as strike-breaker, and the question of his entrance into the army as private and officer.

It was then that the Russian Revolution took place and I scarce knew what it meant to me and to the world. Not much had been said of Russia in my school days, in secondary nor high school years. In college, I remember reading George Kennan's articles in the Century magazine. These stories of cruelty and injustice connected with banishment to Siberia stirred me greatly: the long trek across a quarter of the world; the tearing apart of families; the insensibility to human suffering. I have never quite outlived the impression which these stories made upon me. Rather negligently I followed what little was offered in the press on Russian history and policy. Chiefly it was a matter of Czars and Grand Dukes in their relations with Western Europe; of the folks themselves there were only incidental references to picturesque mujiks. Passing references to anarchists and the assassination of a Czar and high officials, left in my mind the current impression of Russia as semi-civilized and tyrannous.

49-2-21

Czar Alexander III was reigning while I was studying in Germany and in 1893, sent his fleet to France to conclude the Entente Cordial. This was impressed on me as I saw in Berlin, on the Tempelhofer Field, a celebration of the renewal of the Triple Alliance, with pomp and pageantry and with Wilhelm II and the Italian Crown Prince present. Later in 1900, I attended the most perfect of international exhibitions in Paris and crossed the Pont Alexandre which celebrated the new Franco-Russian alliance. For my exhibit on American Negroes I received a gold medal; and at the same time I noted exhibits of the new Russian industry which French investment was then nourishing.

All this was of passing interest until Russia and Japan went to war in 1904-1905. I admired the temerity of one of the Darker peoples daring to wage war against a great white power. I remember outlining its progress on the floor of the chapel of Atlanta University and using my baby daughter's choo-choo train to mark the moving of the armies along the Trans-Siberian railroad. My concept of Russia began to gain body and clearness. Already my contact with socialism in Germany had made me critical of Czarism, and there was now added the race problem in the conflict of a white and colored people. After that I followed from afar the Russians struggle for emancipation and drew parallels between Russian peasants and American Freedmen, emancipated at nearly the same moment and both kept in slavery by denial of land. I read of the pogroms against the Jews and likened them to our lynchings, which were ominously increasing.

Then came the unthinkable First World War, which tore at the moorings of all my historical knowledge and economic foresight; and at its edge, the Russian Revolution of 1917. I was bewildered at what was happening and tried for ten years to withhold final judgment. With students and audiences and on paper, I maintained that I did not know what was really happening in Russia

49-2-22

or how it would result. I certainly believed Russia needed radical reform and was encouraged at the Menshevik effort under Kerensky. When the Bolsheviks came to power, I hesitated; was this Thermidor or something more permanent and fundamental? Was Marxian Communism possible or a wild, perverted dream? I again relapsed into silence; but I did believe that the Russian people had a right to experiment and that the United States ought to recognize the new government. We had certainly recognized worse in the past.

I had succeeded in circulating the Crisis magazine widely and could now give some attention to broader aspects of social reform; and one symbolic occurrence after the Russian Revolution fastened my attention. We had gone to live in an apartment in lonely Carnarsie, outside New York City, when one day a strag dog came to us; he was young, scrawny, and dirty, but had evidence of breeding. So my little daughter kept him for her own and he grew sleek and beautiful. Then one day two Russians appeared, a man and his wife. They pointed to the dog and said he had run away from them.

"It is our dog," and "Larrabee!" they called; and he went, wagging his tail. But my wife came quietly to the door and said, "Steve!" and leapt back in joy and wriggled on her and kissed her. Then there was parleying and tales of his beautiful wolfhound mother and "will you take him?" asked my wife, her voice soft with fear. The Russian woman petted the dog tenderly and said, "No, we go back to Russia, now that Revolution has brought Freedom; and leave him with you, for he loves you and you are kind."

Meantime my attention was diverted. In the peace negotiations following World War I, I conceived the idea that the emancipation of Africa from colonialism might begin. I first tried to have German Africa set up as an international domain ruled by world science and philanthropy with representation of the educated Negro world. I think this idea had some effect in implementing the final Mandates Commission. I went to France in 1918, to advocate

49-2-23

my ideas through a Pan-African Congress which was held in Paris with the consent of Clemenceau and was followed eventually in 1921, and 1923 by further meetings in London, Paris and Brussels. Here extraordinary opposition developed among the Colonial Powers and I was accused openly in Brussels of being financed by Russia, which again called my attention to the Revolution there.

I made my first visit to Africa in 1923, visiting Liberia and few English and French colonies on the West Coast. I became vividly aware of a Negro Problem far greater than I had envisaged in America, and my mind leaped further; more or less clearly I found myself asking: Is the problem of color and race simply and mainly a matter of difference in appearance and cultural variation, or has it something in common with the industrial organization of the world? With Poverty, Ignorance and Disease? Has Revolution in Russia something fundamental for the Negro Problem in the United States and the Colonial Problem in Africa?

But despite questionings and faith, I continued puzzled about Russia and what was happening there. The papers were flooded with tales which I did not want to believe and yet found no answer. I realized that wartime propaganda had begun to dominate newsgathering and that it was difficult to get the truth on many matters. How far this would eventually go, I did not then dream. Claude McKay took me to task in 1921, for not appreciating the meaning of the Russian Revolution. I replied in July:

"Mr. McKay is wrong in thinking that we have ever intentionally sneered at the Russian Revolution. On the contrary, time may prove, as he believes, that the Russian Revolution is the greatest event of the nineteenth and twentieth centuries, and its leaders the most unselfish prophets. At the same time, The Crisis does not know this to be true. Russia is incredibly vast, and the happenings there in the last five years have been intricate to a degree that must make any student pause. We sit, therefore, with waiting

49-2-24

hands ~~listening~~ and listening ears, seeing some splendid results from Russia, like the cartoons for public education recently exhibited in America, and hearing of other things which frighten us.

"The editor of The Crisis considers himself a Socialist but he doesnot believe that German State Socialism or the Dictatorship of the Proletariat are perfect panaceas. He believes with most thinking men that the present method of creating, controlling and distributing wealth is desperately wrong; that there must come and is coming a social control of wealth; but he does not know just what form that control is going to take, and he is not prepared to dogmatize with Marx or Lenin. Further than that, and more fundamental to the duty and outlook of The Crisis, is this question: How far can the colored people of the world, and particularly the Negroes of the United States, trust the whole working classes?

"Many honest thinking Negroes assume, and Mr. McKay seems to be one of these, that we have only to embrace the working class program to have the working class embrace ours; that we have only to join trade Unionism and Socialism or even Communism, as they are today expounded, to have Union Labor and Socialists and Communists believe and act on the equality of mankind and the abolition of the color line. The Crisis wishes that this were true, but it is forced to the conclusion that it is not.

"The American Federation of Labor, as representing the trade unions in America, has been grossly unfair and discriminatory toward Negroes and still is. American Socialism has discriminated against black folk and before the war was prepared to go further with this discrimination. European Socialism has openly discriminated against Asiatics. Nor is this surprising. Why should we assume on the part of unlettered and suppressed masses of white workers, a clearness of thought, a sense of human brotherhood, that is sadly lacking in the most educated classes?

49-2-25

"Our task, therefore, as it seems to The Crisis, is clear: We have to convince the working classes of the world that black men, brown men, and yellow men are human beings and suffer the same discrimination that white workers suffer. We have, in addition to this, to espouse the cause of the white workers, only being careful that we do not in this way allow them to jeopardize our cause. We must, for instance, have bread. If our white fellow-workers drive us out of decent jobs, we are compelled to accept indecent wages, even at the price of 'scabbing.' It is a hard choice, but whose is the blame? Finally, despite public prejudice and clamor, we should examine with open mind in literature, debate, and in real life the great programs of social reform that are day by day being put forward."

In April, 1922, I spoke a stronger word: "Russia is the most amazing and most hopeful phenomenon of the postwar period. She has been murdered, bullied, lied about, and starved, and yet she maintains her government, possesses her soul and is simply compelling the world to recognize her right to freedom even if that freedom involves the industrial reconstruction of her society."

Later my views became more definite: "There can be no question but that the Russians have made a good appearance at Genoa. Their demand for recognition as a de jure government was logically inevitable and unanswerable. Their initial offer to reduce the military forces so as to lessen France's excuse for a great army was not only delicious but fair; their treaty with Germany was reasonable within itself and no one else's business; their offer to assume the pre-war debt incurred by a Czar for the purpose of enslaving the mass of Russians was generous; and their desire for a loan paralleled the desire of nearly every other nation. The world still has a right to doubt the ability of the Bolsheviki to conduct, in peace and prosperity, industry and government by democratic political methods, or even by oligarchy for the

49-2-26

benefit of the mass of people; or of the right of a government to sequester private property and manage commercial enterprises.. We ourselves are doing business as expressmen, farmers, manufacturers, bankers, miners and weather prophets. The Bolsheviki may be dreamers, but they are not fools."

In 1923, I invited Claude McKay, who had visited Russia, to tell our readers what he saw and heard. He wrote: "Though Western Europe can be reported as being quite ignorant and apathetic of the Negro in world affairs, there is one great nation with an arm in Europe that is thinking intelligently on the Negro, as it does about all international problems. When the Russian workers overturned their infamous government in 1917, one of the first acts of the new Premier, Lenin, was a proclamation greeting all the oppressed peoples throughout the world, exhorting them to organize and unite against the common international oppressor -- Private Capitalism. Later on in Moscow, Lenin himself grappled with the question of the American Negroes and spoke on the subject before the Second Congress of the Third International. He consulted with John Reed, the American Journalist, and dwelt on the urgent necessity of propaganda and organizational work among Negroes of the South.

"The subject was not allowed to drop. When Sen Katayama of Japan, the veteran revolutionist, went from the United States to Russia in 1921, he placed the American Negro problem first upon his full agenda. And ever since he has been working unceasingly and unselfishly to promote the cause of the exploited American Negroes among the Soviet Councils of Russia."

I was impressed by McKay's story of his experience in Russia, but at the same time I was upset by the current newspaper stories about Russia: Community of women; easy divorce and systematic abortions; collapse of industry, slave toil and continued incipient revolt; famine, hunger, homelessness and despair. I was determined if ever the chance came to vist Russia and see for myself.

49-2-27

The chance came. Into my office early in 1926, walked three strangers. One was a dark, short man, evidently educated and well-bred, who spoke only Russian and French. His attractive and carefully groomed wife spoke Russian, German, Italian, and English, all with facility. With them was a tall, blonde German, a more nervous, impatient character, who could use only his native tongue. They introduced themselves as Russians, familiar with my periodical and anxious to enlist my sympathy in their effort to obtain for Russia the recognition of the United States.

I was a little amused at their apparent ignorance of the lack of influence of a Negro with Washington; but I told them I thought recognition ought to be given, although I added frankly my usual line of not being able to judge of the new Russian regime since I knew so little about it, and found reliable information so difficult to obtain.

The German appeared to be an impatient revolutionist who wanted action. He hinted at revolt among oppressed Negroes. I sought to explain that we were winning our fight, albeit slowly, by peaceful but continuous agitation and legal battle. He did not stay long in New York.

The other two were of different calibre. I explained to them the Negro problem as I saw it. They talked of Russia and its aims. Other calls and talks followed, which I and my wife enjoyed very much. At last, they said frankly: "Would you not like to visit the Soviet Union so as to make up your mind as to its aims and accomplishment?" I said I certainly would. "I am not at all satisfied with the knowledge that I have of the Russian Revolution. I should like to learn, if possible, at first hand just what has taken place in Russia and just what the development is at present. I do not know that I could learn anything that would be of advantage to the colored people of the United States, but if there is anything to learn I am eager to learn it. On the other hand, in undertaking this or any other trip I should not want to obligate myself to come to any particular conclusions or to follow

49-23-28

any line of action or to see the facts with any other eyes except my own."

They thereupon offered to pay the expense of the trip, with the clear understanding that I would be free to examine conditions and come to my own conclusions. I accepted the offer with alacrity and left for Russia in the Summer of 1926.

I went to Antwerp to see Rubens. I ascended the Rhine looking again at the vaulted Cathedral at Cologne, at the Lorelei, at the Rheinfels; glancing at the old street of the Jews in Frankfort. I went up into the Thuringian forest where I first learned to know the old world and its culture, a half century ago. But all my friends in Eisenach had disappeared in the war, with little trace. I saw Berlin, a giant city which had become since the day I knew it, one of the centers of the world. But never before have I seen so many girls for open sale as on the streets of Berlin. I had to wait a week for a visa, since I could get none in the United States. When my visa came, more confusion arose since my name, "Du Bois," had been translated "Wood." A messenger had to come all the way from Russia to straighten things out. At last in the Summer of 1926 I set sail for Russia from Stettin.

49-2-29

Simon Peter would have called me a scoffer;

> "saying, where is the promise of his coming?
> for since the fathers fell asleep, all things
> continue as they were from the beginning of
> creation!"

CHAPTER II

THE SOVIET UNION IN 1926

It is 1926. I am sitting in Revolution square opposite the Second House of the Moscow Soviets, and in a hotel run by the Soviet Government. Yonder the sun pours into my window over the domes and eagles and pointed towers of the Kremlin. Here is the old Chinese wall of the Inner City; there is the gilded glory of the Cathedral of Christ the Savior. Through yonder gate, on the vast Red Square, Lenin sleeps his last sleep, with long lines of people peering each day into his dead and speaking face. Around me roars a city of two millions.

I have been in Russia something less than two months. I did not see the Russia of war and blood and rapine. I know nothing of political prisoners, secret police and underground government. My knowledge of the Russian language is sketchy; and of this vast land, one of the largest single countries on earth, I have seen only a small part. But I have seen something. I have traveled two thousand miles and visited four of its largest cities and many of its towns. I have seen the Neva, Dnieper, Moscow, and Volga Rivers, and stretches of land and village. I have looked into the faces of its races -- Russians, Ukranians, Jews, Tartars, Gypsies, Caucasians, Armenians, and Chinese.

I have not done my sight-seeing and investigation in groups and crowds, but have in nearly cases gone alone with one Russian-speaking friend. In this way I have seen schools, universities, factories, stores, printing establishments, government offices, palaces, museums, summer colonies of children, libraries, churches, monasteries, Boyar houses, theatres, cinemas, day nurseries and cooperatives. I have seen some celebrations -- 200,000

49-2-30

youths marching on Youth Day. I have talked with peasants and laborers, commissars of the Republic, teachers and children.

I have walked miles of streets in Leningrad, Moscow, Nijni Novgorod and Kiev, at morning, noon, and night; I have trafficked on the curb and in the stores; I have watched crowds and audiences. I have gathered some documents and figures, plied officials with questions and sat still and gazed at this Russia, that the spirit of its life and people might enter my veins. I stand in astonishment and wonder at the revelation of Russia that has come to me. I may be partially deceived and half-informed, but if what I have seen with my eyes and heard with my ears in Russia is Bolshevism, I am a Bolshevik.

This enthusiasm did not mean that in 1926, Russia was a picture of happiness and success. It was not. There was stark poverty. I remember the hordes of incredibly dirty, ragged and wild children of war and famine who were hiding in the sewers and stealing like beasts through the streets at dusk. I remember the long lines of ragged people, waiting to buy a loaf of bread. I remember also the bookstores, the readers on the trams, the crowds in museums. A poor land, but a land of enthusiasm and one which to my astonishment had not emerged from war in 1918, on Armistice Day, but was beginning just in 1926 to breathe air free from Civil War and invasion, promoted and participated in by my own nation.

We had ridden out of Stettin at eight in the morning, along flat land. The city rose a little old and yet new, with busy harbor; and we sailed the long, broidered river bay and the canal mole. Three days we glided through the Baltic and the Gulf of Finland until we came to the East Sea. Some Germans aboard were returning to the Volga and they sang sad, sweet folk songs in the night. German and Russian was heard and a little French, but no English. The low, grey back of Gothland rose on the left in the late afternoon of the second day. Many ships, hurrying toward Stockholm,

49-2-31

slipped by noiseless in the night, but in the morning low islands lay in the East. Esthonia came and a little fairy island rising eastward like a secret resting plce of elves beneath the grey,cold rain.

There was ever a secret excitement among us: we whisper and speculate -- Russia? We exchange rumors -- we correct them and spread others -- Russia! Mysterious -- ahnungsvoll! Many of the passengers are German tourists; there was a bridal couple, very conscious; a Paris Teuton, big, calm and cold; a mother with her young, golden daughter quite spoiled by "mutti;" a big and bearded Russian, a former judge, but not a "comrade;" he hates the Bolsheviks; an actress, silked, and coifed; all the world! We sang by phonograph, "In einem Kühlen Grunde."

The chimneys of Reval smoke far away and its great lighthouses rise; a sail boat gracefully crosses our bow and then Kronstadt -- long lines of empty docks -- a few warships, dismantled; old yellow forts, and warehouses, some crumbling, some rebuilt -- most of them empty; and above all, a golden Dome -- stately in the quiet morning. This is a ghost city of a dead Empire.

49-2-32

I first went to St. Petersburg, now Leningrad, and walked the Nevski Prospect. I stood in the Place of the Revolution and the parade ground looking on the proudest of bridges, spanning the Neva. There was a moving monument, marble and double-eagled: a low wall of greyish brown with great square stones and wide openings; with the graves of a thousand victims dead beneath the flowers. In the center were the Sickle and Hammer, and the words:

You who fought for the freedom of the world
You who are her first victims and whom we envy
You who fighting since 1848
Deserve to lie here too.

Last night at twilight I walked in the Square before the Winter Palace. It loomed red-brown and the statues and chimneys above it were as ghosts. It must have been a brilliant and wonderful city in the day of Czars for those who could enjoy it. There is a certain barbaric splendor that blends here

and there -- the red marble column to the Napoleonic Wars is almost Egyptian -- the marble Atlases before the Hermitage -- the gigantic bronzes of Cathorn.

Leningrad is cleaning house feverishly, raking, planting, white-washing and painting. There is not much new building, I should say. But there is so much to be done, and they're at it.

The Neva ripples -- a bright and beautiful silver band, beneath a half dozen bridges, with palace and fortress and towers of churches. Last night I wandered up and down the October Prospect. The electric light came on late; people wandered; two were drunk. The park at the end was filled with a quiet, happy crowd; unaccompanied young women walked unaccosted.

It would be hard to recall my first impressions of the population of Leningrad. There are a number of whining beggars near the great hotels and and even on the trams; there are some unkept and wild-looking street gamins. Yet the off-scourings of men seem comparatively few; the level of prosperity, however is low! Poor clothes, old fashioned and patched, few silk stockings, bad shoes, and yet on the whole a contented looking folk -- busy going and coming, working; not unusually gay but not morose, nor complaining.

49-2-33

Some of the people on the street seemed a bit gruff and envious. There are covert comments on our Western clothes. One girl streetcar conductor did not like to give us directions; she looked a fallen shopgirl; another was very kind -- she looked a risen peasant. There are strong internal foes of the Bolsheviki evident: intellectuals, merchants, gentry. Manners on the street are not too good, but tempers are placid; there is some bowing and raising of hats, but few pardons are asked. With general kindliness comes some rude, self-assertion from the gutter. They naturally crave for comfort and luxury. I saw a kerchiefed woman very poorly dressed, standing in perfect silence, motionless beside a window of dresses, silks, and underwear!

The public ordering of the revolution has been in some respects a masterpiece! Books, books, books, cheap and of every sort, size and subject,

everywhere. Public monuments are cared for; they left Alexander III in mighty bronze and said simply: "This is the author of our troubles." They let Catherine the Great, flaunt her ample skirts without remark. The Czars, from Peter to Alexander II, lie buried in the Cathedral of Peter and Paul, lying in simple marble state; Peter the Great rides unmolested in his great boulder; but schools, theatres, state stores, newspapers, carry a mighty propaganda. In nine years the people have had put before them a new interpretation of history and economics.

We saw the prisoners cells in the Cathedral of St. Peter and Paul -- the church of the Czars; the little house built within a house where Peter the Great lived. We rode out to the islands of the Blessed, which was once the Czar's village (Tarsko-Selo) now called the children's village (Detskoe-Seloe). Those may see the meaning of this who glance at the palace of Alexanders -- that golden throne room -- the rooms of amber and marble; the tables of lapis lazuli and mother of pearl, the equisite inlaid floors. It is a barbaric burst of splendor to titillate the jaded palates of the masters of millions -- outdoing Versailles, Potsdam, Berlin, and Vienna.

Leningrad is almost surrounded with factories. They tell me of great iron and steel works, and a factory population which was the backbone of revolution. Tall chimneys smoke everywhere and large numbers of workmen pass. The ride between Leningrad and Moscow is like Southern New England in olden times: rolling pines and beeches, cattle and horses, grass. Only villages are huddled grey and poor and the crops look meager. Yonder Moscow, squats and burns, flat like a wide village, built like an irregular star of circles about the Kremlin.

First came the Kremlin as a fortress in the twelfth century; then in sixteenth century came the inner city around the Kremlin called Chinese Town; then in the seventeenth century came the enveloping wall of the White City followed by a wall of a larger city of artisans,and finally, the new suburbs

49-2-34

of servants and artisans and further extended a greater city, one beyond even the ancient fortress and out past the new Maidens Convent.

From the Sparrow Hills of romance (the "Lenin Hills" of Revolution) Moscow looks rather splendid, laying in the wide bend of the river with its great cathedral of Christ rising in five golden domes and almost hiding the Kremlin. Moscow also is feverish with repairs -- painting, whitewashing, building with wood, brick, plaster, and stone -- scaffoldings rise and fall, roofs swarm with hammering; barred sidewalks drip with calcimine, roads are torn up and put down, domes are gilding; flowers are planted, old walls and monuments are restored. But with all this the city is still cold and worn. Leave any modern city unkept for ten years and it is half-ruined. Moscow is poorly clothed -- very poorly, but fairly fed and badly housed. There is a fad of careless dressing; blouses, caps, and boots, colored shirts and collars for men; blouses, kerchiefs, socks for women; yet the women eye Western clothes hungrily, and the state taxes their import remorselessly.

I visited one of the great state factories of the Moscow cooperative where they employ 1,875 people and make candy, cookies, soap and perfume. The director was a former workman of the factory, nominated to the post by his fellows and appointed by the directors -- a free, simple fellow of forty, full of enthusiasm and eager to inform, to whom the working folk raised their hats. The machinery was modern and made in England; the employees were clothed in white, simple, inexpensive cotton drill. At the expense of the factory, the meals of soup and a meat course, with bread, were furnished. Then in a clean, light living room at thirty kopeks a piece, they had a library of 4,000 books and a reading room. The librarian, a brown slip of a girl, a voluntary Communist worker, was vibrant, talkative, exact with her records and careful of her card catalog.

The children, from two to nine, were taken care of in a day nursery with

49-2-35

nurses and daily visits by the physician. Visitors and mothers were compelled to wear cotton over their clothes and the children had aprons. They were given regular afternoon naps in bed, meals with milk and eggs. There was a garden with sand for them to play. Mothers had a clean room and table to come and nurse their children.

The products are beautifully made with clean, unadulterated materials and supplied to the public ten to twenty per cent cheaper than private firms. Above all is the spirit, the gaiety, the earnestness and rising efficiency, the health, light and air. Twenty-five per cent of the workers are Communists. Girls on piece work are said to earn normally $25.00 a month; some men earn $1,200 a year. All get one month's vacation with pay and free medical care and insurance.

There was one interesting incident: as we visitors came in, a big, capable working-woman pushed by. She was dissatisfied wit her job in one of the stores; she did not like the manager and wanted the Director to transfer her. He promised her an answer tomorrow. "Tomorrow!" she "thou'd" him; "would you tell your wife that?" "But I must consult the manager." "You'll forget" -- "No, I won't" -- "Well, can't you decide now -- you see it's this way," and the long explanation was gone over again. "Well, tomorrow I will see," repeated the young and harassed chief. She finally took his phone number and left. There was no anger but there was a lot of industrial democracy.

In the State Printing office, Russia is printing books for her one hundred or more languages. Everybody, even workers at lunch were eager to show us. The school had a hundred apprentices -- Jewish, Chinese, Tartar, Arabic -- a dozen or more people, boys and girls. School books, new alphabets, cards, placards, all sorts of things in black and color were scattered about. Students are sent by trades-unions or at public expense. They are fixing and comparing letters of the alphabets by all sorts of devices. They have

49-2-36

German, English and American equipment, but German is cheapest and English and German firms give credit terms. They spend 250,000 rubles a month on the work. They spent 500,000 rubles on equipment last year and will spend 400,000 next. They set type here, print, cut and bind, photograph and make plates, repair and rebuild machines. It is a little nation of nations working happily together.

I saw two universities today, the Communist University for Eastern peoples; 1,000 students with everything furnished, clothes, food, tuition and ten rubles a month for extras. Laboratory and seminary methods were used with charts, reports and careful individual records. There is a four-year course in mathematics, science and social sciences, with considerable practical work in factories and in villages. There are 72 nationalities attending; only Communists are admitted, chosen by their own nationalities. They must be healthy, have a record of two or three years work and advanced enough in education.

49-2-37

The Chinese University, of 300 to 400 students (60 women) with a two-year course, is privately supported, with a fine library and reading room. There are striking diagrams of China's political and economic serfdom showing England in control of customs and salt; France running the Post Office, and each foreign director with two to eight European advisors. Students are crowded in the reading and studying rooms with interpretators and Japanese dictionaries.

The great national library now named after Lenin has three million volumes -- old fashioned but beginning to grow. It received only a pittance under the Czars but now has new buildings and modern equipment. A little library school trains two hundred librarians in one and two-year courses for village libraries.

The library of the Communists Academy has 800,000 volumes and has never

been catalogued by modern methods. A tall, charming, and beautiful woman is at the task and had a dictionary card catalogue of 15,000 titles already started - a hard task with Russian and Latin lettering. She had worked in America seven years in the Library of Congress and at the Widener Libary of Harvard. She was full of enthusiasm in her cramped but overflowing quarters and expects a modern library within two years. They spent $100,000 last year on new books. Once she and her husband had been exiled for seven years in Siberia under the Czars, but in 1905, they escaped to America. There he made a speech in Russian and said that the revolution must in time spread to America. He was arrested and sent for a year to prison at Easton, Pennsylvania. She said he suffered more in that year than in the seven years in Siberia and came out on a stretcher, prostrate from typhus and pneumonia. For a year he was ill.

I saw the Marx-Engels Institute -- a marvelous collection of the whole literature of economic revolt the world over and in all modern tongues; books, pamphlets, and 40,000 photostatic copies. It is one of the finest working libraries I have seen, with 175,349 volumes.

The museum of the Revolution is a history of Russian effort to be free -- in picture, relic, and manuscript such as the world has seldom known. It is almost unbelievable how the Russian people were murdered, oppressed and tortured. Since 1774, many have fought back; in 1825, in the 40's and in the 60's; a vast army struggled in 1905; and the first victory came in 1917. In blood and tears Russia has striven for freedom.

There is much criticism allowed in Russia. One man writes in the press of rubbers, "I suppose if I live, I may get to buy rubbers by Christmas." Mensheviks complain that the state has no money -- "Where are the rubles?" Peasants complain that the new manufactures are not good. There is argument as to wages.

The theater for the people is thriving in poverty and bareness, yet with

49-2-38

beauty. I saw Don Juan in the Experimental Theatre rarely done with the Mozart music and new words. Propaganda was there and "Revolution" rose to hunt down the profligate and save wives, daughters, and sweethearts; but it was done with a smile, gaily and artistically. I saw "Boris Gudonoff" played with historic costumes; there were magnificent settings. I saw "The Woodland" interpreted by Meyerhold; the barest mechanicisms, no scenery, footlight, no props but extraordinary acting! In one of the studios of the Art Theatres the lovely farce, "The Flea," was given -- the peasant blacksmith who knew English technique and made a mechanical flea, and fitted with horseshoes and marked with his sweetheart's name. Finally, I saw Meyerhold's prophetic "Hail China!"

Russia seems to me the only modern country where people are not more or less taught and encouraged to despise and look down on some group or race. I know countries where race and color prejudice show only slight manifestations, but no country where race and color prejudice seems so absolutely absent. In Paris, I attract some attention; in London I meet elaborate blankness; anywhere in America I would get anything from curiosity to insult. In Moscow, I pass unheeded. Russians quite naturally ask me for information; women sit beside me quite confidentially and unconsciously.

49-2-39

Today I was on the estate of the Counts of Orlof. One could still picture its former glories; a palace of marble, with silk, gold, and paintings; a vast park with noble trees, a rolling lawn, vales and dells; a lake and the gleam of the Moscow river; parkways enough to house a town; little palaces, a beautiful bath house, rows of flowers; offices, barns and buildings. It was the kingdom of a little king, two miles from the Chinese City but now in the suburbs of ~~the city.~~ Moskow.

The early Orlofs got their start when one became sweetheart of the Great Catherine. They reigned in luxury and splendor for two centuries. Then the Soviet Republic took their property and made it into a public park and turned the palace into a furniture museum. Frankly, this property would

seem to be doing Russia more good in its present use than in its former. That the present Orlofs suffer is true; but that the Orlofs from start to finish, have received ten times as much as they ever gave; and that Russia has been long carrying them as unhealthy barnacles on her body,economic and social, is quite as true.

In the Museum one noticed the beauty and splendor that once surrounded the Few. Were they high-thinking artists enjoying life? Those that were, revolted from the system. The others had their maws "filled with over-plus" and were still an-hungered. Idle profligates was the largest crop.

I went to the Tretykov Gallery today and saw the Russian world of Art preserved; an astonishingly beautiful thing; a beauty once set apart and but half known; the work of Repin; his heart-breaking "unexpected" and his "Ivan the Terrible" with his murdered son; Vereschagin's skull; marvelous religious conceptions with strong and beautiful faces; Menshikov in exile; fairies and gods; "The Last Judgment" with the golden domes of Russian churches. All about us were crowds of workers and peasants listening to art explained. I never saw or dreamed of a picture gallery with such an audience -- women, children, boys, men; uncouth, crowding, but rapt.

Tonight I saw Lenin lying as if asleep. There was a long, long queue of workers,as every night. We went into the Square beneath the walls of the Kremlin. He lay so still and natural -- a little man, bold and blonde, bearded, with clipped moustache, just asleep. His form was partly outlined. Above on the Kremlin burned the Red Flag. On the square directly opposite his tomb, and occupying a vast building with iron girders and shops exhibits of all kinds, were installed some of the most active retail activities of the New Economic Policy. Here one could buy almost anything in necessities and luxuries from Western markets; and the aisles were crowded.

One afternoon I visited Radek of the Executive Committee, in a room in the Kremlin in vast disorder; books,pamphlets, a wide couch bed, a desk, a

49-2-40

table; a typewriter, chairs, tobacco and magazines: not a storehouse, but a workshop. He was a spare man, almost insignificant, but with good eyes, pleasant voice and encyclopedic knowledge. He talks English, French and, of course, Russian. His English had a strong accent, but was good and fluent. We talked of races and racial minorities; of the 600 Chinese students in Russia, and how hard they work; of the returning power of Germany and the restoring of her colonies. He was much interested in American Negroes and incensed at the Negro-hating trade unions. He believed in the rapprochement of the colored peoples. He came with me to the gate of the Kremlin. His wife and little girl are in this country; "We revolutionists cannot afford large families -- we must be on the go." Later I had tea with his family.

The Kremlin is a thing unique -- fortress and royal residence set on a low hill -- gleaming under gilded, copula and pointed Italian towers, and clasped by a vast brick wall with swallow tail battlements. It is a magnificent jumble of times and things, powers, tyranny, wealth, war, religion, murder, jealousy and revolution.

I saw here something of the glory of the Czars of Russia and the Russian Church, including the magnificent service which Catherine the Great gave to her favorite Orlof; the clothing of Czars, and finest of silver and gold jewels and pearls, swords, scepters; ivory in all forms, clocks, watches, crown jewels, mirrors and tables; a riot of glory of wealth and beauty. The extravagance was tempting; the icons plastered and inscribed with gold pearls and diamonds; cathedrals and palaces crowded together and the Cathedral of the Czars crowning all with its lofty arches and wealth of jewels, and paid for by starving workers and peasants.

Over the Kremlin lukks the spirit of Ivan the Terrible and his broken bell and the tower opposite; the denuded statue of the assassinated Alexander II, and the Czars in magnificent madness. Catherine is there too, her carriages, her silver, her gifts. There is a beautiful old and Byzantine palace

49-2-41

from whose roof Napoleon saw Moscow burn and the marble statue of himself which he lugged t Moscow but had to run and leave.

Last night we were in a self-governed school session. Children, some 200 from thirteen to seventeen years of age, boys and girls, had a glorious time. They had a "wallpaper"with news; they laughed, shouted, and played tag. Finally, they took their places on benches in fairly quiet order. There was a "presidium" of four -- with one girl. A black-haired boy rose to deliver the chief address -- could he speak forty minutes, he asked diffidently? "No," was the cry; they allowed thirty and finally thirty-five minutes. In a matter of fact way, he told of the origin of the Youth Movement in Russia; how other organizations had fallen away from the Communist ideals; how the pioneers differed from the Scouts; how they must strive for world unity and against war.

They sang the Internatioale, with saluting hands. Then others spoke. One boy told of what had been done to ward off tyranny and bureaucracy; a little lad of thirteen and a girl made speeches. They finally invited the principal of the school to address them. He criticized their late beginning and poor singing. Then they staged a play, impromptu: Russia, Red-flagged in distress; the Communist Cadets ran to her aid; boys and girls represented Italy, Germany, France, Spain; one represented the small nationalities of Russia and spoke broken Russian. Another represented America, talking of money and checks. There followed gymnastics, the girls bare-legged and in bloomers; then "questions and answers;" dancing and singing, joy, enthusiasm, noise and lovely deference to and ignoring of the strangers present; a beautiful evening with children of workers.

I saw parts of the tenth Celebration of Youth Day in Moscow. Today 200,000 children and youth with more grown-ups marched through the Red Square: Russians of all sorts and kinds, a hundred or two Chinese, Tartars, Caucasians, Turks, two or three Negroes; -- an extraordinary demonstration. First several

49-2-42

thousand delegates from the provinces stood in the Square and listened to speeches from Commissars and guests. Then the marching began and lasted two hours. Red streamers and mottoes were carried; uniforms and everyday clothes. Some of the vagabond children in rags, were singing and marching. It looked like an enthusiastic, voluntary mass movement, tremendous in size and deep in belief. There were many groups of athletes, bare-legged boys and girls -- splendid, powerfully limbded. One group of Chinese were in native costume. I never saw a greater variety of Russian types, all aggressively working-class and glorifying in it. In the afternoon at the fair grounds they were at it again, marching and playing -- some little horse-play but no roughness and no degeneracy.

Yesterday, my last in Moscow, we went at one o'clock to a peoples' court: a clean, square, white room with wooden benches, a table draped in red, a judge, two assessors, and a clerk. It was well filled with people.

The judge was intelligent without airs; the Assessors seemed ordinary common people. They listened but said nothing. Thecase was a labor dispute. The coal carriers who supplied engines had too far to walk with their coal and it ruined their clothes. They wanted state uniforms and pay for those which ought to have been furnished since 1925. A railroad man testified and the judge and all debated, the judge directing the talk. All stood within the rail around the table. There was no Bible, nor swearing of witnesses. The case was carried over. The next case had lawyers and was postponed because of absence of witnesses.

After the court, I visited the Secretary of the Trade Union Central Organization of the USSR in a huge office building. There are twenty-three unions of workers of all Russia, with 90 per cent of all wage earners as members. The Biennal Congress had 1,800 delegates -- one for each 10,000 members. State Central Organizations had delegates in proportion to institutions represented. These elect national delegates, who are uninstructed.

49-2-43

Industries not trades are represented and all in a given industry join; transfer from industry to industry is allowed. Sweepers as well as skilled workers are all in the same union and each with one vote.

Strikes against managers occur sometimes and are arbitrated. There are 9,000,000 wage earners, and the number is increasing rapidly with increasing industrialization. All factories are now in use, but some with poor machinery. New factories are being constructed.

But after all, Moscow is the center of bureaucracy. Real Russia lies outside. I had always wanted to Nijni Novgorod, far out on the Volga. I wanted to see the Ukraine. Once at Kiev, I started to return through Poland and Berlin, but scanning my geography I figured out a bit of almost impossible romance at no greater cost, and said to myself, "Why not return by the Black Sea and Constantinople and Greece, Naples and Gibraltar?" I hesitated. It seemed almost fantastic; and yet at last I ventured.

49-2-44

First I went to Nijni Novgorod, tempted by the name which I remembered from my boyhood; and wishing,too, to get nearer the geographical heart of this vast land. It was a long, hard rail ride and in some ways disturbing. The name of the city was soon changed to Gorki, for awful reasons which I did not then in the least comprehend. The city, at the head of the majestic Volga, full of historic associations, suddenly seemed to mean but one thing to me -- war and its pitiful aftermath. To be sure the broad and once beautiful and prosperous center of a world-wide trade was reeling to its feet; I saw schools and factories; some buildings and trade and commerce starting to revive down the river. But chiefly I saw a people shattered and torn by a war which I smugly imagined had ended nearly a decade ago. The wild and savage forays of Denékin and Kolchak on their dash to Moscow backed by British gold and American food, lived again in the battered walls and torn streets of this key city, between Asia and Western Russia.

And gleaming through the rubble peered the Church. I can see yet that gem of a cathedral -- tiny, narrow, but elegant and utterly beautiful; jewelled and decorated, with the rich voices of priests still intoning; with faded Christ and Virgin peering mistily out of rich dark walls; and without a city stricken by Civil War and foreign invasion, so far from help that all seemed lost even when the miracle came, and Moscow hurled the invaders into the Black Sea. It was a cold, hard trip back to Moscow, but with it went the thrill of realizing how near the West had come to conquering Russia and stopping the crucial effort to make socialism work, and how completely it had failed.

I turned next to Kiev. The sunflowers of Russia were blooming in the black Ukraine. The poet Schevtchenko and his black American friend, Ira Aldridge, lived in my memory. We crossed the sand-barred Dnieper, a great tower rising before us with smaller turrets of gold and wide white walls. We saw the low-flaring domes of the city. Physically Kiev is fantastic. The Dnieper almost knots itself around it and the city rises, plane on plane, each one at angles with the other, all facing different fronts and all apparently unseen and unheard of by the other. It gives the impression of three or four independent cities in juxtaposition and yet not neighbors for their streets never apparently meet nor mingle.

We went to the Polytechnique with 2,500 students and well-equipped laboratories for research; then to the Lenin school for abandoned children where 1,000 children are maintained at a cost of $135,000 a year. The children come voluntarily -- on a week's trial and then are sifted and distributed to one, four, and seven-year courses with shops, common boarding, and division into circles of common living, recreation, etc. Club rooms, and theatres are furnished and most of the pupils look happy. Ten or twelve run away each year and to not return.

49-2-45

I visited an old fortified monastery with its great towers and clouds of golden domes. A charming lady who spoke French showed us the museum and underground catacombs with its tombs and bodies -- a curious and gruesome sight. There were some icons of the sixth to the eleventh century and chests with complicated locks. There were beautiful vestments -- oh, the money spent on vestments in Czarist Russia! "You should see the Ukraine in its beauty," said Madame, well-bred and a bit pitiful in manner. She had many memories. The day was grey, slightly leaden aloft. The Dnieper was a brown stream and the purple steppes shelved away into blurred shadows. I'm sure the Ukraine in Spring must have a startling beauty.

In the cities, the land the home questions are difficult to estimate. There are some new one family houses. I saw building in Nijni Novgorod and the outskirts of other cities; some large apartment houses for a hundred or more families, with one to four rooms, are building in Moscow and Nijni Novgorod. In most cases people are swarming in buildings once built for the rich.

Odessa is decidedly Western in aspect, even more than Kiev, with few domes and none of gold -- with great square blocks of yellow stone houses. One saw the peasant costumes of the Ukraine and people, gay, careless, fairly well satisfied, although I suspect much complaint, from the former well-to-do; and the merchant and marine workers of Odessa must complain. There is the wide sweep of the Black Sea; I walked beside it hours today; the shore plunges down in ruined wall and ravine and the dark water gleams below. There is a statue of Pushkin --"from grateful Odessa" -- a beautiful opera house, once a work of consumate art. I saw the steppes and bridges of the "Battleship Potemkin."

Odessa is an imposing city from the sea, even if its harbor is empty and in disrepair. We slipped out of the harbor with red flag flying, turned sharply to the right and sailed on the dull gray Black Sea, along the way of the Golden Fleece from Byzantium to Greece. We sailed long, quiet days and

44-3-46

nights until suddenly Constantinople flames in the morning sun. The towers of gold -- clean and high -- the vast, ugly and magnificent bulk of St. Sophia, the grace and mounting beauty of the Magnificent Suliman.

I remember that civilization came to Russia from Constantinople. Greek orthodox fleeing from Islam, rested and grew in Kiev and Moscow. The Iconoclasts drove the icon to Russia. St. Sophia and the East developed the dome churches and overlaid them with gold. Visitors -- rich and near rich -- will prefer Constantinople to Moscow. Shops here are full of luxuries for the rich; women are silk-clad and for sale. The world is ordered for the well-to-do.

In Moscow there are few prostitutes and few luxuries for sale. It is on the enntrary, a straight, almost grim region of poorly clothed people and a terribly earnest attempt to erect a world of and by the workers. Beggars? There are beggars in most cities; but in Constantinople they are a permanent, stereotyped popular institution with signs for explanation and arrangement. In Russia they are a dwindling remnant.

49-2-47

It is on its economic problem that Russia in 1926, must ptimarily be judged. Russia had established a socialistic state. The world had long been veering toward Socialism. We had made essays toward socialism; but when the Socialistic state appeared full-fledged, most of us called it by other names and refused to judge it by its socialism, but rather we insisted on investigation of the ethics of the methods underlying its establishment.

What had Russia done in 1926, to establish a Socialistic State? First, it had nationalized the land. Every inch of land in Russia -- the air above it and the resources beneath belong to the Russian State. Person who wish to till the soil may have as much land as they can successfully till, with the labor of their own family; and with the death of the father, the children may have first chance at tillage of the same soil. Preference as to kind and place of soil goes to the former users of any particular piece. The mineral

and oil rights may be farmed out by the government for a term of years but the government retains ownership of mines and wells and the terms of the leases are limited. Improvement on the land -- houses on farms and homes of the dwellers belong to the builders if they cost less than about $15,000 -- if more, their ownership goes to the state after forty-nine years.

The State [illegible] either conducts industry itself or sets the levels of private enterprise. All of the fundamental industries -- manufacture of steel and iron, preparation of foodstuffs and clothing, most of the exporting industries, like coal mining and so on, are conducted as state-owned trusts. The work of distribution of the products of these industries, in order to provide foreign industries, is conducted fully by the state, the great cooperative stores and by direct sale, and it is partly open to private enterprise. The scope of private enterprise is therefore mostly confined to imported luxuries or near luxuries.

The government conducts education on a broad scale -- not simply common school and elementary training training, but also higher and universal training, industrial training and techniques of all grades, as well as general social education and information, including newspapers, radio, news collection and the like. It also undertakes day nurseries, child refugees, orphanages, old age and motherhood pensions, workers vacations, and so on.

All this requires enormous capital, a wide spread bureaucracy of intricate administration and individual effort of a high order. How far is this extraordinary effort successful? The peasants are elevated with their access to the land but they have low production because of ignorance, antiquated methods and lack of machinery and markets. This the government is meeting partly by general and special education. Schools are being established slowly but in considerable numbers.

But here already in 1926 loomed trouble. I sensed it when in Leningrad

49-2-48

our "ishvorshnik" peasant turned cabby for the winter pointed to a tractor in the suburban fields near an agricultural experiment station. "See there?" he said, "Waste of money! They have tried to teach the peasants of my village t use such contraptions; it wouldn't work . I put my horse in and pulled them out."

Never on so broad a side has an attempt been made to reach and civilize the country districts of a vast land and raise the rural economy to a level with the urban. The city is trying to help by entertaining peasant visitors. Peasant hostels are being established; I saw the vast one in Moscow and I visited one in Nijni Novgorod. Children, students and workers are sent to the country on vacations; cooperation is taught and attempted in machinery; markets and model farms are being established. Soil investigation goes on. But all this merely scratches the surface. Russia is a wide, expansive land. The peasants are widely scattered. Some land is rich, some is very poor. In general, their winter is terrible and floods and famine must be faced now and then.

Meantime, Russia is at work. God how these officials work! Comrade H--- spends six hours in office and six to eight hours in inspection and lectures; the assistant to Lunarchasky, the Secretary of Trade Unions, the head of the Mosselïron, all are men working to the limit and even failing in health. One day I talked with the head of democratic education. He had finished a hard Saturday morning -- committees, phone calls, callers, and clerks. We came at 2:30 in the afternoon and about three he began to talk and explained clearly until five! Comrade Elena works six hours in the office and eight in the field -- committees, lectures, inspections. But on the building goes.

Finally, if Russia fails, reason in industry fails. If Russia succeeds gradually every modern state will socialize industry and the greater the Russian success, the less revolution.

All the polite culture and grace of high society and wealth of Russia

49-2-49

are in exile, with their disbelief in and contempt for democracy; bearing testimony against Soviet Russia in places of influence throughout the world.

The tremendous task of maintaining the dictatorship of the Communists and keeping inner disagreement from disrupting it, is met by denouncing, by criticism and discussion of problems of policy; shall a surplus of income go to wages or to state-owned capital? To necessities or to general culture? But at least they are openly discussing such problems, which are problems of every state, but usually decided among us by war or strike without reasonable discussion.

Nowhere in modern lands can one see less of the spender and the consumer, the rich owners and buyers of luxuries, the institutions which cater to the idle rich. One sees in Moscow, Leningrad and Kiev neither first-class hotels, nor luxurious restaurants; neither private motor cars, nor silk stockings nor prostitutes. All these insignia of the great, modern city are lacking. On the other hand, the traveler misses the courtesy and savoir faire which one meets in the hotel corridors of London and Paris; one misses the smart shops and well-groomed men and women who are so plentiful in Constantinople and Berlin. Does this mean that Russia has "put over" her new psychology? Not by any means. She is trying and trying hard, but there are plenty of people in Russia who still hate and despise the workingman's blouse and the peasant's straw shoes; and plenty of workers who regret the passing of the free-handed Russian nobility; who miss the splendid pageantry of the Czars and who cling doggedly to religious dogma and superstition. There must be in Russia dishonest officials and inefficient statesmen. But here Russia has no monopoly. There are those in Russia and outside of Russia who say that the present effort cannot succeed for exactly the same reasons tht men said the Bourgeoisie could never rule France.

But it is the organized capital of America, England, France, and Germany which is chiefly instrumental in preventing the realization of the Russian

49-2-50

workingman's psychology. It has used every modern weapon to crush Russia. It sent against Russia every scoundrel who could lead a mob and gave him money, guns, and ammunition; and when Russia nearly committed suicide in crushing this civil war, modern industry began the industrial boycott, the refusal of capital and credit which is being carried on today just as far as international jealosy and greed will allow. And can we wonder? If modern capital is owned by the rich and handled for their power and benefit, can the rich be expected to hand it over to their avowed and actual enemies? On the contrary, if modern industry is really for the benefit of the people and if there is an effort to make the people the chief beneficiaries of industry, why is it that this same people is powerless today to help this experiment, or at least give it a clear way? On the other hand, so long as the most powerful nations in the world are determined that Russia must fail, there can be but a minimum of free discussion and democratic difference of opinion in Russia.

There is world struggle then in and about Russia; but it is not simply an ethical problem, as to whether or not the Russian Revolution was morally right; that is a question which only history will settle. It is not simply the economic question, as to whether or not Russia can conduct industry on a national scale. She is doing it today and in so doing she differs only in quantity, not in quality from every other modern country. It is not a question merely of "dictatorship." We are all subject to this form of government. The Russian question is: Can you make the worker and not the millionaire the center of modern power and culture? If you can, the Russian Revolution will sweep the world. One can stand on the streets of Moscow and Kiev and see clearly that Russia has struck at the citadels of the power that rules modern countries. Not manhood suffrage, woman's suffrage, state regulation of industry, social reform nor religious and moral teaching in any modern country have shorn organized wealth of its power as the Bolshevik Revolution has done in Russia.

15-2-64

Is it possible to conduct a great modern government without autocratic leadership of the rich? The answer is: this is exactly what Russia is doing today. But can she continue to do this? This is not a question of ethics or economics; it is a question of psychology. Can Russia continue to think of the State in terms of the workers? This can happen only if the Russian people believe and idealize the workingman as the chief citizen. In America we do not. The ideal of every American is the millionaire -- or at least the man of "independent" means or income. We regard the laborers as the unfortunate part of the community and even liberal thought is directed toward "emancipating" the workingman by relieving him in part, if not entirely, of the necessity of work. Russia, on the contrary, is seeking to make a nation believe that work, and work that is hard and in some respects disagreeable and to a large extent physical, is a necessity of human life at present and likely to be in any conceivable future world; that the people who do this work are the ones who should determine how the national income from their combined efforts should be distributed; in fine, that the workingman is the State; that he makes civilization possible and should determine what civilization is to be.

For this purpose he must be a workingman of skill and intelligence and to this combined and Russian education is being organized. This is what the Russian Dictatorship of the Proletariat means. This dictatorship does not stop there. As the workingman is today neither skilled nor intelligent to any such extent as his responsibilities demand, there is within his ranks the Communist Party, directing the Proletariat toward their future dictatorship. This is nothing new. In this government "of the people," we have elaborate and many-sided arrangements for guiding the rulers. The test is, are we and Russia really preparing future rulers? Insofar as I could see, in 1926 shop and school, in the press and on the radio, in books and lectures, in trade unions and National Congresses, Russia is. We are not.

Visioning now a real Dictatorship of the Proletariat, two questions

49-2-58

follow. Is it possible today for a great nation to achieve such a worker's psychology? And secondly, if it does achieve it, what will be its effect upon the world? The achievement of such a psychology depends partly upon Russia and partly upon the United States and the Western part of Europe. In Russia one feels today, even on a casual visit, the beginning of a workingman's psychology. Workers are the people that fill the streets and live in the best houses, even though these houses are dilapidated; workers crowd (literally crowd) the museums and theatres, hold the high offices, do the public talking, travel in the trains.

The Soviet program is mainly psychological; can a people be trained to work effectively with the general prosperity as the motive and the fear of poverty and old age taken away? The present generation of lazy, indifferent and inefficient workers were trained under capitalism. Their psychology will change slowly. Leisure and taking away of the fear of poverty will mean to them loafing, laziness, and self-assertion; to a large extent, the tremendous strain of the transition period.

49-2-53

The Soviets have had war after war, conquest after conquest and famine, and but three years of experiment. Can the Soviets conquer jealosy and envy on the part of the workers? Yes, they answer by giving them necessities. But how about luxuries? By raising a public opinion against luxuries. There is something like this now. Moscow has no well-dressed leisure class. But it is a hard job and you and I, who have been trained to distrust human nature and believe in selfishness and lust, may easily believe a task impossible. Sometimes we seem to be right.

There is no question but that governments can carry on business. Every government does. Whether governmental industry compares in efficiency with private industry depends entirely upon what we call efficiency. And here it is and not elsewhere that the Russian experiment is astonishing and new

and of fateful importance to the future of civilization. What we call efficiency in America is judged primarily by the resultant profit to the rich and only secondarily by the results to the workers. The face of industrial Europe and America is set toward private wealth; that is, toward the people who have large incomes. We recogniz e the economic value of small incomes mainly as a means of profit for great incomes. Russia seeks another psychology. Russia is trying to make the workingman the main object of industry. His well-being and his income are deliberately set as the chief ends of organized industry, directed by the State.

I leave one subject to the last of my 1926 observations of Russia: religion. I lived two months opposite the inscription on the Second House of the Soviets, written by Lenin:

"Religion is the opium of the people!"

Whatever was true of other lands, this was certainly true in Russia in 1926 and before. Symbols of religion dominated the city, from the vast five domes of the Cathedral of Christ -- a greater and four lesser; five crosses, a greater and four lesser; and gilded lace-like chains which held them. It cost $200,000 a year to gild the cathedral. The 350 other churches of the city dominated the landscape, as they loomed and glowed.

There gems of beautiful bejewelled churches; there hordes of priests intoning litanties, begging alms, forgiving sins. There were thousands of shrines. One of the most striking of Russian pictures which I saw was Vasnetzof's "Last Judgment," with conventional angels, Christ and God. But the heaven in the backgroumd were the golden domes of Moscow. Only one who hears the chant of a Russian service, sees its color and genuflections; only those who know the gorgeous litany and the beautiful Russian churches can realize what Lenin meant when he called the Russian religion, "opium."

But it was worse than opium. It was the Russian Priest, Father Petrof, who said in 1908, "There is no Christian Czar and no Christian government.

49-2-54

Conditions of life are not Christian. The upper classes rule the lower classes. A little group keeps the rest of the population enslaved. This little group has robbed the working people of wealth, power, science, art, and even religion, which they have also subjected; they have left them only ignorance and misery. In the place of pleasure they have given the people drunkenness; in the place of religion gross superstition; and beside, the work of a convict, a work without rest or reward.

"The ruling regular clergy with its cold, heartless bony fingers, has stifled the Russian Church,killed its creative spirit, chained the Gospel itself, and sold the Church to the Government. There is not an outrage, no crime, no perfidy of the state authorities, which the Monks who rule the Church would not cover with the mantle of the Church, would not bless, would not seal with their own hands."

The British Trade Union report of 1925 says: "The Holy Shrines at all the main street corners of the large cities are still open and well patronized. Priests in the dress of their calling are still seen about the streets...

"A very strong propaganda in the Press, the schools, colleges, and Trade Union clubs is, however, carried on against religion generally, and especially as practiced by the old Orthodox Church. The kissing of crosses and ikons is prohibited by the Ministry of Health as being accountable for the spreading of infectious diseases, especially consumption and syphilis. The practice, however, still survives; though long queues of infected children waiting to receive the sacrament from the same chalice are no longer seen. The remains of certain saints,whose bodies were supposed to be preserved intact, and thowse forehead was exposed through an aperture in the lid of the coffin to be kissed by thousands of pilgrims, have been exposed to public view as dust and bones, while the supposed forehead was shown to be but a puckered piece of leather fastened to the doffin lid.

49-2-55

"The former Government-controlled licensed houses of prostitution, where girls were exposed for hire at a recognized fee, have been closed. In Tsarist days these houses were a recognized Government institution; the opening ceremony was undertaken by a police officer and the premises blessed by Russian Orthodox Priests."

One thing was certain: if there were to be a Russian Revolution, it had to begin by the domination of the Church by the State.

There is one thing I remember from this visit of 1926; it was not vivid at the time but came back to me later: it was the admiration which the Russians had for the United States. Chiefly it was naturally the envy of our marvelous technique; our mastery of natural forces and the deft way we turned them to our will. I remember somewhere in mid-Russia being shown through a vast repair factory for locomotives. Amid all sorts of difficulties and scarcities engines were being repaired and built. It was a miracle of desperately hard work with only fair accomplishment. The director had a right to be proud and was; but he said, apologetically, "Of course, it's nothing compared to what you do in your Pittsburgh!" The Russians in 1926 were determined to believe that the fundamental American democracy, bursting up from a land of workers, who had freed slaves and made the lowly rich, would eventually sympathize with and support the struggling Russian state. Just as in 1789, they hailed free France, and in 1848, welcomed the victims of repression. They knew or thought they knew that in the end America would clasp hands with the U.S.S.R.

It happened that just before I went to Russia, a delegation of nine workers representing the British Trade Union Congress, left London early in November, 1924, and spent two months in sight-seeing and study. Their report of conditions at nearly the same time as I made my notes serves to confirm in my mind the fairness of my observations. I venture to quote a few paragraphs.

49-2-56

"The Soviet system at present consists of a series of compromises, most of them in constant change. One of the most striking characteristics of the present regime is its readiness to recognize failure. Should a Communist theory fail to give the required results it is scrapped for all practical purposes as ruthlessly as any Tsarist tradition. On the other hand, should ideas of institutions or individuals associated with the old order prove useful instruments there is no hesitation in using them.

"For all opposition is as yet silenced. But the need of it is not so much felt, owing to the extraordinary candour and criticism of those conducting affairs, and their readiness to conform their policy to new requirements of the moment. The constant elections and discussions at congresses keep those in power in touch with opinion; while the continuous stream of official publications and pronouncements keeps opinion informed of any defects that may develop in the system and of the proposals for reform. In fact, the critical functions of an opposition both in the press and on the platform are largely performed by the Government itself. The speeches of political leaders are generally critical lectures on economics, not the appeals to passion and partisanship that are found necessary elsewhere.

"As to the persistent assertions in the Press that the present regime in Russia is a 'reign of terror,' the Delegation would wish to put on record its conviction that this could not be honestly believed by any unprejudiced person traveling within the Union and talking to its citizens."

The report, dated 1925, concludes:

"In view of the information contained in the preceding chapters -- all of which has been obtained by themselves from sources and through channels that convince them as to its general accuracy -- the Delegation has come to the following conclusions: That the USSR is a strong and stable State: That its Government is based firstly on a system of State Socialism that has the active support of a large majority of the workers and the acceptance of an

49-2-57

equally large majority of the peasants; and, secondly, on a federal structure that gives very full cultural and very fair political toleration: That the machinery of government though fundamentally different from that of other States, seems to work well, and that the government it gives is not only in every way better than anything that Russia has ever yet had, but that it has done and is doing work in which older State systems have failed and are still failing; That these good results have reconciled all but a very small majority to renouncing rights of opposition that are essential to political liberty elsewhere. And that this causes no resistance, partly because these rights have been replaced by others of greater value under the Soviet system, and partly because recent movements have been steadily towards their restoration: And finally, that the whole constitutes a new departure of the greatest that is well worth foreign study and a new development that may be greatly benefited by foreign assistance."

But here -- here in the white Silence of the Dawn,
Before the Womb of Time
With bowed hearts all flame and shame,
We face the birth-pangs of a world:
We hear the stifled cry of Nations all but born --
The wail of women ravished of their stunted brood!
We see the nakedness of Toil, the poverty of Wealth,
We know the Anarchy of Empire, and doleful Death of Life!
And hearing, seeing, knowing all, we cry:

Save us, World-Spirit, from our lesser selves!
Grant us that war and hatred cease,
Reveal our souls in every race and hue!
Help us, O Human God, in this Thy Truce,
To make Humanity divine!

49-2-58

CHAPTER III

BLIND STAGGERS, 1917-1936

Sitting in Moscow on my arrival August 28, 1926, I was reading the New York Times; it said "Revolution has broken out in Cronstadt. Streets are flowing with blood!" I stared in astonishment, for the issue was dated the very day I had landed in Cronstadt. One can know what Cronstadt looked like when I landed by reading page 20. The dispatch was dated from Riga. That explained much. Riga was in Latvia; just south of Estonia and but 50 miles from Lithuania, these three states of Clemenceau's Cordon Sanitaire, whence European Big Capital would one day re-conquer Russia. Thus Riga had long been a nest of liars who poured fairy tales about Russia into the West. Even I had known that and how could the TIMES be misled into printing this story without confirmation? I went back in my own mind to what I had known about Russia since the Revolution and remembered that I was astonished to learn how long the war had lasted in Russia after the Armistice. Leaving Russia in October 1926, I tried after my return to America to collect and organize my knowledge and read neglected books and reports.

49-2-59

The result was amazing. I presume in all our knowledge something like this takes place: save in some narrow file we know events and situations vaguely, from newspapers, magazines or a book or so. But soon we are making judgments and coming to conclusions not on a basis of carefully garnered knowledge, but on flimsy generalizations influenced tremendously by current public opinion. Thus we tend to learn our history backwards.

I had known that Czarist Russia naturally resisted the revolution. But of the extent of that counter-revolution and of the active help in manpower, material and arms, supplied by the civilized world; of the spying and intrigue from all Europe which had accompanied and inspired this war of reaction; I had but the vaguest information. Indeed I did not learn

the whole story until Sayers and Kahn published their "Great Conspiracy" in 1946.

What amazed and uplifted me in 1926 was to see a nation stoutly facing a problem which most other modern nations did not dare even to admit was real. Taking inspiration directly out of the mouths and dreams of the world's savants and prophets, who had inveigled against modern industrial methods; against the co-existance of progress and poverty; against slums and disease; this new Russia led by Lenin and inspired by Marx proposed to build a socialist state with production for use and not for private profit; with ownership of land and capital goods by the state and state control of public services including education and health. It was enough for me to see this mighty attempt. It might fail, I knew; but the effort in itself was social progress and neither folishness nor crime.

Russia was handicapped by 95% of illiteracy among her peasants and nearly as much among her working classes; by a religion led by a venal and largely immoral priesthood, dealing in superstition and deception, and rich with the land and loot of grovelling followers. Most of her industrialcapital was owned by foreigners whose only interest was the 50 or 75% which they reaped from merciless exploitation. Her government had long been shot through with dishonesty and graft under dissolute nobles and fawning lackeys. Her punishment of crime and independent thought had long affronted the civilized world. Yet the best people of Europe and America seldom raised a finger of protest but fawned on Russian royalty and aristocracy, receiving them with open arms and loud sympathy when they were repudiated.

Now after this first glimpse of Russia I traveled home. I had made a great pilgrimage; the sort of journey of which one dreams. I had seen the Scheldt at Antwerp and the paintings of Rubens; I had seen the

49-2-60

CHAPTER III

towers of Cologne, the Rhine and the Lorelei; I walked by the Rathhaus of Frankfort and through the Thuringianwald to the Wartburg of Luther; through Berlin and its Thiergarten. I had gone to the Baltic Sea, the Nevsky Prospeck and the Winter Palace; for me the Red Flag had waved above the Kremlin, the slow boats had moved down the Volga and the Great Fair had opened at Nijni Novgorod; down the Dnieper I had found the Black Sea.

Now I turned backward toward home. Going I saw glimpses of the Glory that was Greece and the Grandeur that was Rome: the foundations of that European culture into which I was born--foundations now in semi-ruin. Along the Bosphorus, villas of tarnished splendor and semi-tropical trees appear; they cluster and climb the hills to white and brown-walled terraces. There comes a narrow pass with towers mighty and crenelated. The strait opens its beautiful arms and in the evening sun burst the domes and minerets of the city, Constantinople.

The city glooms and shines with six immense vast domes and sixteen minerets; house on house piled like fortress walls rise on the right; and on the left Asia. I have never seen a city like Constantinople. It is magnificent and terrible. It is a microcosm of human life writing all its startling beauty and repulsive cruelty. The great sweep of its domes bulging toward Heaven, its hills, its rivers and seas, its crowded harbor and more crowded streets all give to its 2500 years of history a vividness and measuring which gatherings of men in millions possess.

I walkedthe walls of Constantinople; I have seen the walls of Moscow and Nuremburg, of Carscasonne and Grenada, but never such gigantic walls of defense as the Wall of Theodosius; great wall and under-wall, deep moat and massive square and hexagonal towers. They defended African and Asiatic culture against German and Slav barbarisms for a thousand

49-2-61

CHAPTER III

years. Vast and grim was the long, long lonesome sweep of stone interlaid with blues and browns, in part now cracked and falling, but enough by another thousand years. Yonder lies Thrace and Hungary and Europe and Kiev and Norgorod, long lonesome worlds of men.

I quailed before the city. I could get no idea of it. Its infinite winding streets were baffling. It was a great and unknown giant. Then I went down to the Golden Horne and the teeming streets of Stamboul and putting my shoes from my feet stood beneath the dome of Holy Wisdom. One great curve sweeps above the immensity of the church and looms 170 feet above the soft carpeted floor. It is a singular and mighty thing; 40 windows light it and the dome itself rests on four tremendous archs. There are four vast pillars and arcades froming perhaps the most wonderful single building in the world. For 15 centuries this thing has risen, trembled, swayed and groaned in the golden light of its old and holy beauty. It is right for men in bared feet with out-stretched hands and moving mouths to touch their foreheads in its dust.

I had one wide look over all the burning beauty of Stamboul and Persia and Galatea to Scutari and the wild rocks of the Principa of Wilson and Trotsky; the Golden Horn and the Bosphorus, the Propontis and away in the distance the shadow of the Hellespont. But all day the great golden aisle of Sant Wisdom screamed in my soul. I saw the Scarcophagous of Alexander the Great, and beyond Scutari where skilled slaves of European capital toil cheaply in quiet. Beyond them a city of the sleeping dead, high above the Golden Horn, beneath ancient cypresses. Yonder the 10,000 Greeks came to barter.

We passed through the Hellespont in starlight, the water dark silver, the sky a deepened blue, tha land black and heavy; high Europe and wide

49-2-62

CHAPTER III

Asia and across the cortege flew Hero and Leander, Xerxes and Mohammed, Lord Byron, the Turkish host and armies of Russia, England and France. Above us hung the ruins of Abydus.

Then came the night. The Bear, the Pleiades and the Milky Way shone joyously and lingeringly the day arose again on the Isles of Greece. Achilles and Patroclus lie in long last sleep. How well I remember stumbling through the mighty lines of Homer:

Menin aeide thea
Peleiado Achillaos!

Yonder hidden to the left sleeps ~~Troy~~ Troy. Beyond is Olympus, garlanded with snow. Lemnos comes on the right hiding Samothrace and on the right we leave Gallipoli where 10,000 British boys were murdered in 1915 for nothing; murdered and died ~~and stank~~ by the blunder of Winston Churchill.

49-2-63

All this by faith I see beyond the old Aegean; but real in soft morning light looms golden Euboea and Andros. We are amid the Cyclades--but empty, empty, barren and dead to all the sweet song, the myriad tongues, the plying boats, the teeming tarde to the past--dead and why?

No land that lived and breathed like Greece and Lesser Asia needed to die; but any nation that sins against the Holy Ghost must die if truth lives. We thread the Cyclades, pass Chios and before us lies Greece. Bare but beautiful rise the blighted hills and mountains of Attica in the morning sun. We swept toward Salamus and the Periieus to see the pale and deathless Parthenon peering through; to see the rose colored columns of the Temple of Jupiter and the Acropolis. It was all pitiful and forlorn in its torn and raped beauty; baked and burned and yet eternal in the perfection of the dream that built it. The theme was simple, and quiet in its restraint, yet bold in the grandeur which conceived it, on a hill amid mountains, with backdrop of seas and all about memories of Thebes and

CHAPTER III

Thermopylea, Eleusis and Hymettus. The market place where Demosthenes talked stands rough like Paul; the Dynoysian theatre crouched low to listen to Aeschylus, Euripedes and Sophocles.

Athens was a dead wraith of white dust, hot and sweltering; and through it poured refugees from war and Turkey. Tall black mountains grimly escorted us through the canal and into the Gulf of Corinth; by the heaped mass of the Peloponessus, with Platea and Mycene and other mighty names all about us. The night bell tolled for Ithaca and with morning, came Italy.

It had been 33 years since I had seen this land; again I glimpsed beautiful faces and white towns as we sped by Brindisi; saw sea and Appenines and came to the Bay of Naples. Vesuvius wore the wreath of smoke; but gone was the gayety and lazy laughter of Santa Lucia. I was whisked to a fashionable suburb and tucked into a "Grand" hotel at fabulous rates. The trains were "running on time" and the beefsteak was English; but in the little day I stayed I searched in vain for the old, care-free, dirty, jolly Naples; in its place the world was marching in uniform: officers strutting, soldiers quick-stepping, even boys parading. The Farnese Hercules was still there and the room of Titians. I saw Capri hiding beneath a broken-backed rock; in the rock is a hole; in the hole the sea blazes blue; writhes and seethes and blazes blue.

And now it is done. The blue sun set is dropping toward a sea of moltan lead. Capri rises black and cloudy sharply limbed against the Sorento green and gold shines with the soft sheen of evening. A sullen rock with a cross which was not meant. Castles old and high, perch on its edge of heaven; ships with silver sails go reverently home.

49-2-64

CHAPTER III

"O I have sighed to rest me," sings the orchestra. The breath of Vesuvius spreads rose colored above the purple bulk of the long low mountain and then it slips up into grey, pink and golden clouds and wraps the skies in veils and scarfs and mists. And the sun changing is orange burnt and sudden in the sky. Vesuvius is solemn and its waving veil sinister until it strikes high Heaven and the sun. Now Capri fades and Sorento is hard and sharp against the sky. The bay of Naples fades and dies then lives in a long string of topaz lights which run in a great circle from Pazzule to where Pompei was.

What was wrong with Greece and Rome that they died and fell? Here modern science on which we stand today was born; here beauty found rare expression which still sets ideals today; yet Greece is bare, eroded, ruined and poverty-stricken and diseased; Italy is crime cursed, sick and wretchedly poor.

We got science and Art from these beginnings; some unsurpassable heights of culture were reached, which built upon and not wasted, might still guide and enrich us. Here Faith in man and his destiny hurled great monuments to heaven and bore honest, keen, self-sacrificing servants of the common good? What happened? I see Faith which is pragmatic hypothesis going blindly and bravely and all unselfishly ahead and Science which is knowledge reaching the rough and guiding hand, until impatient Faith breaks away and lurches forward to doom, war and hate.

I wonder if Aristotle in his logical building of his city on a substratum of slaves and barbarians did not make the intial mistake which formed the morass into which the world floundered, and which made Rome a slave empire, and forced the Renaissance to give birth to slavery in the new world?

49-2-65

8

CHAPTER III

So that the Victory of Samothrace and the Moses of Michelangelo gave birth logically to black slavery in America and the Industrial Revolution in Northern Europe? Out of this conception of a slave-supported society, we must emerge. The United States had opportunity but refused it in the Reconstruction after bloody Civil War. Perhaps Russia is groping for the way out; for a civilization that will not die of its own contradictions. It must and perhaps at least try to place beneath a new conception of culture, a foundation of mass participation in civilization, which Greece never conceived, Rome thought impossible and Europe and America dreamed of but seldom tried to realize.

As I range froward in space and backward in history, through the mad ruin of this grandeur and bleak desolation of breath-taking beauty; as I foresee in France and England, New England and California this same awful metamorphosis, my mind struggles to unravel the reason beneath and the cure above.

How could I best pause to see this, and now to write it, hurrying as I was through a world staggering blindly between two wars that in ferocity and sheer human depravity spelled one of the Ends of Time? But precisely for all these reasons I must see the world, as I turn home between the daring experiment of Russia and the Western World where modern freedom was born. Through the fading fires of Greece and Rome I came back to re-interpret to myself my native land.

At Naples I boarded the magnificent liner of the Italian Line, built for the luxury trade of rich America. Although I had ordered a second cabin passage, the polite management had reserved a single first class cabin on the theory that no American was too poor to afford that, even though black. It left me practically bankrupt with the baffling problem

49-2-66

CHAPTER III

of sufficient dress shirts. But one martydom I was spared. Indeed I supposed that in half the cases where all my life I have expected discrimination, I have been disappointed; it has not happened. This made it however not sweeter in the other half, where it dropped relentlessly with silent and bitter insult and cruelty. In this case a Harvard man (of all folk!) and his family made my trip most enjoyable; and the boat was a dream of luxury and taste, here on the eve of world disaster.

I returned to America late in 1926. Normalcy and Harding, the President in whose Negro descent I firmly believed, was dead. In his place reigned the colorless Coolidge, a man of my own thrifty New England, who knew as much about the world as any narrow, untravelled and unread provincial. He and his powerful industrial backers had beaten La Follette, honest but hesitant hope of the Liberals, in 1924; and now Coolidge was set to collect foreign debts and raise the tariff to unheard of heights so as to make payment of the debts impossible; to beat down the prices of farm produce, steal government oil at Tea-Pot Dome and chase the murderous liquor gangs to jail for failure to pay income taxes. War was merrily "outlawed" by the Pact of Paris in 1927.

The country was litterally seething with prosperity. Wall Street gambling was reaching new heights of audacity and all the old stick-in-the-mud rules of investment were being broken. Stocks yielding six per cent were selling on a ten per cent basis because of the golden age was a-coming with America in the saddle. But my little business, the CRISIS Magazine, which was paid for by low-wage black workers was losing ground. Its subscribers were out of work. Perversely I assumed that the fault lay in me and that I was not satisfying my readers.

49-2-67

10

CHAPTER III

What was happening in the world? The United States was blissfully unaware that anything was wrong that could not be cured by quick return to 19th century methods of government and industry. What could happen to a great, rich unconquerable land like ours? Coolidge did not "choose" to run and no one chose to have him. We proceeded to elect a new President on the incidental question of whether a Catholic could sit in the White House and also as to whether Negroes had any political rights. The Negro vote was completely ignored that the leaders of the race complained bitterly to deaf ears.

Herbert Hoover was elected president and Hoover looked like just the type of business man to restore and re-build industry, after what all Americans believed to be the last war, which modern civilization would permit to interupt trade. Herbert Hoover had made money as an engineer out of the cheap labor of China, Mexico, Australia , India, and South Africa. Early in the new cantury he had invested heavily in eleven Russian oil concessions and in companies to exploit timber and minerals in the Urals. He shrewdly sold out however before 1917, when these various concessions were confiscated by the Bolsheviks. Naturally he became a bitter enemy of Bolshevism, which he said was "worse than war." When he became United States Food Administrator in 1917 to 1919 he distributed nearly all of the hundred millions which he handled among the armies and peoples who were fighting the Russian revolution. Later as Secretary of Commerce 1921-28, he was a well-known enemy of Russia.

With Hoover as President there was no hope of the recognition of the Soviet Union by the United States. But no sooner was he seated in the White House, than suddenly in 1929, the industrial organization of the United States crashed in unprecedented ruin.

89-2-64

11

CHAPTER III

I had by this time decided that my work as editor of the Crisis was no longer demanded. Quite unconsciously I had absorbed from my day the fashion of guaging usefulness and need by profit. If an enterprise was profitable, or an undertaking was paid for by the consuming public, that proved its worth automatically. If and when it did not pay, it was not needed. Such reasoning was idiotic as I soon came to realize; but also I realized that when my own effort could not longer make this peridocial pay then those who thereafter helped support it, had the right to determine its policies. This latter fact hastened my change of work.

I was sure that the propaganda era of my life was at an end and that now at the end of my life--that was 21 years ago~~,~~; I was 61,- I was justified in retiring from public agitation and devoting myself again to social investigation and pure literature. The urge to do this was all the stronger because opportunity offered to work with a friend; ~~work~~ at the center of the Negro Problems in the state of Georgia; and to be paid a modest salary of $4500 which was sufficient for my needs. I prepared to leave New York and the NAACP, and the deepening gravity of the CRISIS hastened my going; so that in 1934, I was at Atlanta University.

49-2-69

Naturally my interest in Russia kept up however and I was increasingly disturbed by the news. I did not, however, place reliance on the American Press, as I had formerly. For instance the reports of famine and trouble with the peasants did not alarm me. I expected no miracles in Russia. I knew that she had but embarked upon a momentous and revolutionary social program and that from its inherent difficulties and those deliberately placed in its path by the Western world, she was bound to have a difficult path. Moreover from our custom of glorifying war; stopping with "victory"

and then utterly ignoring the frightful recovery from murder and destruction and maiming in limb and morals--I knew that few persons criticising Russia had any idea of her utter prostration from ten awful years of foreign and civil strife.

What happened in Russia during the 20th century? The Phantasmagoria which engulfed the Soviet Union from 1917 to 1936, is almost impossible to picture clearly or concisely. I was long grasping this intricate story and I essay its outlines now with a certain trepidation. This vast land, one-sixth of the globe stood at the threshhold of the new century, a miserable travesty of government and culture. Long revolutionary reaction, open and underground had shaken the land during the 18th century and the 19th. It was jolted to new life by the industrialization of Russia late in the 19th century with French, Belgian and British capital. On the right stood the nobility and high clergy; in the middle were the business men and at the left were the Social Democrats. Left of the Left came the Marxists.

Three men, all under 50, led the Russian Revolution of 1917. Vladimir Ilich Ulyanov, known as Nikolay Lenin, planned it. He was the son of a school inspector and of the daughter of a small landowner, and was born in East Central Russia. Joseph Vissarionovich Djugashvili, known as Joseph Stalin, carried Lenin's plans into execution. He was the son of a shoemaker and grandson of a Georgian serf; he knew the workers of the Russian Caucasus and their problems.

Lev Davidovich Bronstein, known as Leon Trotsky, was the brilliant idealist of the Revolution who both inspired and betrayed Russia. He was born of well-to-do Jews, not far from Odessa.

There were many other figures leaders, but these were outstanding.

CHAPTER III

Lenin was the man of wide reading and sound learning, who took the Marxian theory of socialism and by long scientific experimentation of trial and error adapted it to living and working Russia. Stalin wasthe slow, cautious but keen executive, who knew the common laboring masses of many races and religions. He took the theory of Lenin, and translated it into reality with grim steadfastness, self-effacing sacrifice and unswerving determination.

Trotsky was the brilliant propagandist and dreamer of dreams; in the stress of battle and trial of endurance he could not distinguish between his own ambition and the sacrifice demanded by principle. He helped organize the Red Army and then sold his fatherland to Germany, nearly betraying his fellow workers to the rulers of world industry.

Lenin, one of the greatest men of this century, was a social scientist; that is a man who believed that the ~~actions~~ deeds of human beings were subject to natural law and that this law could be discovered and its action measured. Others like Comte had forecast a Sociology to develop along with Physics and Biology, but practical reformers and religion balked at the concept. A real science of human action would deny Freedom of the Will; it would contradict moral responsibility and acts of God; it was "materialistic."

But Lenin was not the sort of modern Sociologist, who boasted of his science, and did nothing to discover its laws. What laws govern human action, Lenin did not know nor pretend to know. But following Karl Marx, he saw the rhythm of history and determined to plan human life in accord with known knowledge and on such scientific hypothesis as he found would work. He stood ready and eager to revise and restate in the light of experience any hypothesis or theory he might hold. He therefore studied not only the written word of history and economics, but the actual

49-2-71

curent deeds of living men. He knew the lives of the masses; he admitted that much which men did seemed spontaneous and unconditioned and a matter of chance. But he was determined at least to measure the limits of this chance and beyond those limits, if limits there were, to plan the actual lives of man. It was this pragmatic approach to human action, either in government or revolution, that set Lenin apart from and above his followers and contemporaries and explained his life.

While yet a student, Lenin spent five years in exile in Siberia. Then he went to Western Europe to study and organize an effective Socialist Party, planned by Lenin in the All-Russian Congress of Social Democrats. His attempt at Brussels and London in 1903, resulted in division into Mensheviki and Bolsheviki, the right and left of the revolution. Lenin was overborne and after two years in Switzerland, returned to Russia late in 1905.

Meantime, far in the East, Stalin was working among the laborers of Baku. The British trade unionists described how those workers lived:

"During the investigation of the oil fields of Baku we were amazed and disgusted with the conditions of housing the workers which had formerly existed under private control. The living places were not huts; to attempt to dignify them with the mane of houses would be wrong, and the nearest description we can give is the out-houses one finds in the worst slum areas at home... Long rows of dimly lighted buildings, one story high, with small windoes and low-built doorways, and in some cases no flooring but the hearth. In these hovels hordes of people of various nationalities had been housed under such conditions that would subject the owner of cattle in our own country to prosecution for cruelty...We have no hesitation in saying that these conditions of housing the people were the

47-2-74

CHAPTER VIII

vilest and worst we have seen in Russia or in any parts of the world known to any of the Delegation. When we remembered that the output of oil from this district can be counted in hundreds of millions of pools and that millionaires have been created in abundance from these oilfields, our indignation and disgust at the treatment of the workers was unlimited."

Stalin was inconspicuous, cautious and taciturn. He was expelled from the Theological Seminary which he had entered, and found work as a clerk. He became a socialist leader among the oil laborers, inspired demonstrations and strikes, wrote leaflets and contributed to socialist papers. He was neither quick nor brilliant; he was morethan that--slow and tireless and loyal. He saw the oppression of Poles, Finns, Jews, Georgians, and religious sects. He followed the plans of Lenin as technical executive not mere propagandist, working in the gathering of hard facts. He sought methods of action to implement revolution. By 1901, at the age of 22, he was organizing the workers in the oil works owned by the Rothschild interests, and was arrested and spent three years in prison.

Stalin escaped from Siberia in the turmoil marking the opening of the Russo-Japanese war and went back to the Caucasus, where he helped in the oil workers strike which anticipated the Petersburg Revolt of 1905, and which resulted in the first collective agreement between workers and employers ever signed in Russia. The Czarists let the Black Hundred loose on Socialists and Jews and soon had the Caucasus writhing in interracial feuds. Here Stalin learned his great and never to be forgotten lesson of the dangers of race hate, which stood him in good stead during the years when he was Commissar of Nationalities. He wrote vigorously against the Czar and took the side of the Bolsheviks until his work came to the attention of Lenin. The two met in Finland in 1905, and Stalin was surprised

49-2-73

to see his great leader so small of stature and so modest.

The third membdr of the revolutionary triumvirate, Leon Trotsky, arose with the abortive Revolution of 1905, after exile in Siberia. The crazy governmnet of the Czar was riding to its doom. In 1904, it went to war with Japan and was on the way to defeat before the end of the year. Distress spread among the workers of Russia, and in 1905 the workers of St. Petersburg, unarmed, led by a priest and carrying ikons, marched to the Winter Palace of the Czar with an humble petition. They were shot down in cold blood. Revolt flamed; it was not planned revolution, but sudden angry reaction: strikes spread from Petersburg and Moscow to the whole country; a Grand Duke was assassinated; the crew of a battle ship mutinied, and workers organizations called Soviets, began to spread.

The Petersburg Soviet became the spectacular center of this revolution and elected Leon Trotsky as its president. Trotsky had attended the London Conference in 1903 where he sided with the opponents of Lenin. When the Japanese defeated Russia he hurried back to Petersburg and led the Petersburg revolt. He was in his element; brilliant, fiery and daring, he roused the workers to wild enthusiasm, and the revolt reached its climax in an armed uprising in Moscow in June 1905.

Meantime the Czar wavered, granted civil labirties and a duma in 1905, arrested Trotsky in the same year; called and dissolved a second duma in 1907 and then put down the Moscow revolt in a flood of blood. Lenin hurried back to this "general rehearsal."

The attempted revolution failed and Lenin returned to Geneva, prepared to wait, if necesary, 20 years, "unless Czardom is shaken by a major war." Meantime reaction in Russia triumphed; all four of the Dumas were dismissed by the Czar and most of the Socialist deputies sent to Siberia.

49-2-74

CHAPTER III

The following years Lenin described as the years of education for the working group. They learned not only to attack but to retreat. By 1912 the revolutionary forces began to revive.

Czarist Russia entered the First World War as a method of stopping revolution, but succeeded only in revealing the utter incompetency of the government. By 1916, the nation was prostrate and the Czar abdicated in 1917. After a vain attempt of a provisional government to rule, the Revolution of October 1917, put the power in the hands of Lenin.

What happened? The Bolsheviks, now become the Communist Party seized power and established order and made peace with Germany at the cost of much territory, but at the insistence of Lenin who saw no alternative. The Germans demanded Finland, the Ukraine, Poland and the Caucasus, together with an indemnity. Lenin frantically appealed to Britain and the United States, but got no answer. Finally he accepted the treaty, while we Americans called the Russians "butchers, assassins, madmen, scum, beasts!" In 1918, banks insurance, mines and railways were nationalized; foreign debts repudiated and foreign trade made a state monopoly.

Western Europe had transferred to Russia as investment before 1905, certainly 10 billions, perhaps 20 billions of dollars worth of machinery, goods and technical services. It had in turn received back in processed goods, food and materials and labor of all sorts, probably far more than the orginal investment. It is unfortunately impossible to know these facts accurately and with confidence, because the matter of investment and ownership of property is legally and by custom so largely secret.

When the czarist regime was overthrown, the foereign investors feared to lose all of their rights of property and they backed reation to put down the Revolution. But the Bolsheviks in various ways offered compromise.

49-2-75

CHAPTER III

They were willing to repay invested capital and loans at least in part, but unwilling to continue the system or to guarantee future ownership and rate of profit.

Thereupon the West from 1917 to 1922 spent $1000 billions in war to suppress the Revolution. They financed armies, munitions, spies and brigands, besides actually invading Russia with 25,000 of their own troops and 70,000 Japanese; they and their Russian allies killed seven million Russian people and inflicted on them damage amounting to sixty billions of dollars. Whatever plans the Russians h ad to rebuild a new economic world were retarded for ten years. The story does not make sense. Indeed it is guage of our modern inability or unwillingness to reason.

Consider what happened in those fatal years, from 1917 to 1926. The Petrograd garrison revolted, the Kornilov putsch backed by Britain failed and Kerensky fled. France and Britain made treaty to dismember Russia and during the next two years, 14 nations invaded Russia.

In 1918, rebellious Czech soldiers enlisted by the Allies against Russia and raided along the Trans-Siberian railroad. Kolchak proclaims himself "Supreme ruler of Russia," supported by the United States, France and Britain. He rages with murder and cruelty, even as the Armistice is signed ending war in the West. But the Russian Bear at bay, raped and bloody, turns and sinks in its claws. In a year Kolchak, loaded with a billion rubles of loot is in full flight; but Denikin and Wrangel attack from the East and rush to a point only a hundred miles of Moscow. The world sees the Bolsheviks wiped out. So Yudenich attacks Petrograd. Three months later Denikin driven back, deserts his army to flee on a French warship, protected by the shells of the British fleet. In the extreme North, 18,000 British troops, 5000 Americans, 1800 French, 1200

49-2-76

CHAPTER III

Italians, 1000 Serbs and 20,000 white Russians quarrel, parade and mutiny. When the Americans hesitated, the British parodied: "The Yanks are running, the Yanks are running everywhere!"

The Russians conquered Wrangel, shot Kolchak and drove Yudinech to Paris. The Poles with $50 million loaned by the United States, and war supplies from the French and British, join the attack, but are driven back to Warsaw. With new help from the Allies they rallied and took Western White Russia and the Ukraine from the Russians by the Peace of Riga. The allies were encouraged, and the Japanese come to the rescue with invasion in the Far East. A fantastic medieval despot leads there a war of rape, murder and robbery; nevertheless by September, his army has fled to China and he has been shot. The Japanese withdraw.

All this was made possible by the new Red Army, which the fiery Trotsky inspired and led, although he was not the actual creator of the invincible force which saved Russia. At any rate, by 1920, Russia was saved and her power consolidated. Within she was federalized into a Union of Soviet Socialist Republics; without the white armies were throughly beaten.

The World Revolution for which the Communists hoped ~~for~~ did not materialize. Even Lenin had doubted if a single Socialist agricultural state could stand alone in a capitalistic industrial world: and Trotsky had insisted that the Russian Revolution could only succeed if it was prelude to a European uprising. Only Stalin, slowly but with ear to ground, came to believe that Russia not only could but must prepare to stand alone in the world as a socialist state.[1] By 1920, there were settled in the west over two million persons, representing largely the former wealth and culture of Czarist Russia with entree to the best and most powerful social, political and financial circles of Poland

49-2-74

CHAPTER III

Germany, France, and England

They crystilized a world-wide opposition to the Revolution; an opposition all the more powerful and pursuasive, because it was based on real suffering and sincere conviction that this blasphemous revolt against divine right, was something so inherently hideous as to merit any kind of suppression. Now too, came a new enemy, famine , due to disorganization, drought and peasant revolt. In 1891 the famine affected seventeen million persons; in 1906 twenty-one millions; in 1911 twenty-seven millions; but 1921, no less than forty-three millions. In the previous famines the number of peasants who could not get enough grain for seed never was more than three millions; but in 1921, thirteen millions were without seed; that is nearly half Russia was destitute.

Uprisings took place in many places, and the garrison at Cronstadt broke into open mutiny which was suppressed in bloody retaliation. Lenin saw that socialism had gone too fast and with his far-seeing and scientific adaptability to fact, in the face of theory, he startled the 10th Congress of the Communist Party in March 1921, by proposing a "New Economic Policy." This was a retreat from socialism far enough and long enough to secure necessary consumers goods, by allowing small private business enterprises, and by relaxing government controls especially over the peasants. It was as Lenin explained a step backward in order later to take two steps forward. But Trotsky called it surrender to capitalism; while the world regarded it as the confessed failure of socialism.

The New Economic Policy partly denationalized the conduct of industry but not its control. The nationalisation of industry had been, in fact, much less complete than is generally assumed. "Workers' control" established November 14, 1917, was followed by confiscation of certain

CHAPTER III

enterprises; but it was not until June 1918, that the large industries were nationalized. Small industries were still only dealt with specifically and sporadically.

What the New Economic Policy showed, was that the time was not ripe for socializing agriculture, and without that step, no balanced economy could be built in the Soviets. The city industries must for a space depend on private business enterprise and foreign imports for necessary consumers goods. But the new policy meant temporary confusion. If in famine years the brute instincts of the starving had been loosed, now gradually the excesses of the new rich began to be manifest.

Persons who but yesterday had been penniless, now enjoyed prosperity never before known in Soviet Russia. The demand for women increased; cafes and taverns spread and wine was again sold. There was little to bridle the instincts which had been repressed in the days of war by stern military regulation. Divorces increased and 'free love' began to degenerate into excess. Retail and wholesale dealers who had been almost driven out by the Revolution now quickly ~~invested~~ increased to half the previous number.

But socialism and its aims were not surrendered as the West expected. The state controlled still most of the wholesale trade, and gradually began to build Trusts, Syndicates and Banks, analogous to similar enterprises in capitalist countries, but operated and controlled by the state as self-governing and self-supporting enterprises. The reversal of the New Economic Policy was a gradual process and was not completed until 1928, when the first Five Year Plan was launched.

Meantime, Western Europe, convinced that the collapse of Russian Communism was only a matter of time, ~~persisted~~ sought to hasten its downfall ~~in~~

49-2-79

CHAPTER III

from 1920 by a campaign of secret conspiracy, with spying, bribery and incitement to inner revolt which seethed for 20 years and was finally curbed, but even then not stopped, by the Great Depression and the Second World War.

The real and powerful anti-Russian opposition center was the Paris Torgprom, an organization of Russian nobles and European millionaires, including the founder of the Nobel prizes and rich exploiters from all the world, which met in 1920, to stem the tide and systematically finance and guide the re-conquest of Russia. It commanded unlimited funds, military advice from the military chiefs of staffs of Europe and cooperation of statesmen and conspirators of the first order. Centers for training Czarist officers and soldiers were established in five or more European countries. An International Anti-Soviet Conference met in Bavaria in June 1921, with delegates from all over Europe. By 1923, a plan for European military attack on Russia was matured and approved in principle by the General Staffs of Europe.

49-2-80

Meantime carefully organized spying on the Russian conditions with covert encouragement and organizing of internal revolt had begun. A brilliant British subject of Russian birth, Sidney Reilly, began work in 1918 and continued until 1925. He had helped organize the Torgprom and had not only become rich but counted men like Winston Churchill among his friends. He hated the Russian Revolution with perfect hatred and worshiped the memory of Napoleon. He had tried unsuccessfully to organize internal revolt in Russia in 1918, and then returned to London and Paris.

Within Russia from 1921 when Lenin introduced the New Economic Policy, Trotsky, Bukharin and Zinoviev led an opposition group designed to remove Lenin from leadership. The Party in 1921, repudiated this

CHAPTER III

movement and warned Trotsky. In 1922, Stalin was elected as General Secretary. Immediately the Trotsky group went underground and adopted a secret organizing method devised earlier by the British spy, Reilly. It soon had codes and passwords and began to penetrate various governmental departments including the army.

A friend of Trotsky became Soviet Ambassador to Germany and approached the then powerful Reichswher for support. As a result, between 1923 and 1930, 250,000 gold marks annually was furnished by the Germans to replace Lenin by Trotsky as head of the Soviet State. The bribe amounted in the end to a half million dollars. Thus supported by funds, Trotsky at the death of Lenin in 1924 made his bid for power. At the Party Congress in May, he forced the question to a vote, and was unanimously defeated by the vote of the 748 delegates. Trotsky redoubled his efforts and after the freest and widest debate on future leadership and policy in the Soviets he was overwhelmed in a party referendum by a vote of 740,000to 4000. He turned then to revolution.

Through Winston Churchill and the spy Reilly, he invited Savinkov, a professional assassin to come to Russia, and settled a close friend as ambassador to Great Britain. Reilly, the British spy, encouraged by the death of Lenin went again into action. He and Winston Chruchill tried to induce Lloyd-George, prime Minister of England to join them in forcing Savinkov, a former Menshevik, on Russia as dictator. But Lloyd-George thought Russia already on its last legs; "the worst is over", he said. But Reilly was not so sure and enlisted the cooperation of Detering, the oil king, who had been buying up oil claims in Russia. Mussolini was induced to invite Savinkov to Italy; the French government and British oil

18-2-81

CHAPTER III

interests cooperated. Soon the new dictator entered the Soviet Union to head an uprising in the Caucasus; the revolt did not take place and Savinkov committed sucide in prison.

Reilly fled to the United States where he was widely welcomed. He lobbied successfully against a proposed government loan to Russia and met Henry Ford, whom a Russian reactionary had just furnished with the spurious "Protocals of the Wise Men of Zion." Then Reilly was summoned to a meeting with Trotsky in Finland and left hurriedly. He crossed into Soviet terrritory and was shot dead.

Trotsky set September 27, 1927, the 10th anniversary of the Russian Revolution for a revolt. It failed; Trotsky was exiled to Alma Ata a city of 200,000 persons in Southern Kazak in a climate not extreme and where he was furnished a house for his family and personal freedom for writing and correspondance. He himself said that in seven months of 1928 he received 1000 pieces of political mail and 700 telegrams and sent 800 letters and 500 telegrams. He was visited by a government official and warned. He refused to heed and in January 1929, was ordered out of the Soviet Union, to the Turkish Island of Prinkipo in the Sea of Marmora, where once Woodrow Wilson planned a Peace Congress. He arrived in Turkey in state with an armed bodyguard and was greeted by the press of the world. He immediately began in Turkey, France, Norway and Mexico during the next eleven years, a world war against the Soviets which nearly deprived Russia of all liberal sympathy and convinced the reaction that communism was doomed. Meantime the Torgprom in Paris prepared to stop Stalin's proposed Five Year Plan of Russian industrialization. Poincare and Briand were sympathetic and an attack on Russia was planned for 1929 or 30.

49-2-23

A French staff was ready with soldiers from Poland, Rumania and Finland; Wrangel's White Russian Army of 100,000 and Krasnov's Cossacks were to be prepared; British munitions makers were conferred with and money was raised to sabotage Russian industries. But before these plans came to fruition, the whole world of colonial imperialism reeled in threatened ruin. In October 1929, came the stock market crash in New York; in May 1931, came the collapse of the Austrian Credit Anstalt in Vienna and in September, of that year, the Bank of England went off the Gold Standard. The Japanese army occupied Manchuria to "save China from Bolshevism" in 1931, and Montagu Norman, Governor of the Bank of England, wrote to M. Moret, Governor of the Bank of France: "Unless drastic measures are taken to save it, the Capitalistic system through the civilized world will be wrecked within a year."

49-2-83

/

CHAPTER IV

I GIRD THE GLOBE

In the period 1928-1933, when industry crashed headlong in the United States and Western Europe, the Soviet Union began its Second Revolution under the leadership of Joseph Stalin. The first revolution of 1917 was the well known pattern of revolt against tyranny, feudalism, and exploiting capital which first called to power the liberal republican regime of Kerensky after the yielding and reaction of the Czar. Automatically revolt of workers and peasants followed, and then Lenin took hold. War Communism followed not by careful plan but in the absence of plan. ~~In 1921, Lenin explained.~~

11-9-7

Fortunately for the Bolsheviks, just when the people, as it now seems, were at their last gasp, the open foreign intervention came to an end. The year 1920 was the year in which War Communism reached its culmination. "That year," it has been said, "will live long in the memory of all Russians who lived through it as the coldest, hungriest and most dreadful year of the revolution." Then in the spring of 1921, came the worst famine in Russian history, and peasant revolt was followed by military mutiny. Immediately, Lenin took his one step backwards in order to make two steps forward.

Lenin ~~but~~ began his planning for a real socialist state in Russia, when he died. Then there ensued for three years, the widest argument and most democratic decisions as to the future plans and aims of the new state. "This took various forms. There were repeated debates in the principal legislative organs, such as the Central Executive Committee of the All Union Congress of Soviets and the Central Committee of the Communist Party. There were hot

arguments in many of the local Soviets, as well as in the local Party organs. There was a vast Oppositionist literature of books and pamphlets, not stopped by the censorship, and published, indeed, by the state publishing house, extending, as it stated by one who has gone through it, to literally thousands of printed pages."

Stalin realized even better than Lenin that the objects and ideals of the city worker and the rural peasant did not agree. He climbed no new heights of theory and dug no subtle cellars of logic. He himself was a son of a Russian slave of the soil and he saw that distribution of land among the peasants, even the State held title, would not socialize farming. On the contrary, there began forming a new agrarian capitalism with its claws on hoarded food, and without a steady and growing food supply, Russia was doomed and her industrialization and socialization would be impossible.

The Soviet Union attempted its realization by a series of Plans, beginning in 1928. It was a time of troubles; neither Britain nor the United States recognized the Soviets; France, Poland and China were unfriendly; Trotsky was at the height of his opposition and betrayal; both capital and skilled labor were lacking. Above all, a new concerted attack on Russia from the West was scheduled for 1930.

Not only were foreign affairs critical at this time but domestic affairs were in turmoil. Trotsky was at the top of his apostacy, ~~but~~ Nepmen were refusing to surrender and intellectuals inclining toward reaction and even sabotage. There was a dearth of the skilled labor needed, few engineers and managers. World and civil wars had reduced industrial and agricultural output far below prewar normal. It took courage to start a Five-Year Plan at this time, but Stalin had courage, determination and faith.

At first, the Bolsheviks placed hopes on voluntary farm collectives wither consisting of joint labor, or labor and joint capital, communes

with joint living, with housing and other enterprises. Some 80,000 such cooperatives with 10,000,000 members arose. To these were added state farms run with hired labor. But none of these efforts sufficed and many urged that progress could only be helped by encouraging the energetic kulaks and thus building a rural capitalism.

Stalin and the Party refused this compromise. The First Five Year Plan was considered and debated from 1925 to 1927 and adopted in 1928. It proposed to make Russia industrially independent of Europe by development of new mines and oil fields, building iron and steel works, constructing railways and in general expanding heavy industry. For this the Soviets asked larger expenditures for education, scientific research, health and housing.

41-9-9

In industrial production, it succeeded. The gross output increased from 15.7 billion rubles in 1928 to 34.3 billion rubles in 1932 (calculated at prices prevailing in 1926-1927), which represents 218.5 per cent of 1928. The volume of industrial production in 1932 exceeded the prewar level more than threefold, and exceeded the level of 1928 more than twofold. The First Five Year Plan as a whole was fulfilled in four and a quarter years to the extent of 93.7 per cent, so far as the gross output of industry is concerned.

While this plan was being carried through, there occurred a general strike of the peasantry against the government which meant either surrender of planning or what amounted to a Second Revolution in Russia. The background of this tragic impasse involved the whole history of the Russian peasant and is parelleled by the history of agriculture the world over.

While the peasant and city worker had been coupled from the beginning of the Revolution as the foundation of the new state, the plight of the peasant made his participation difficult. The mujik was picturesque, but he

was the worst farmer in Europe. He was ignorant, the victim of age long slavery, misled by a religion which taught superstition instead of morals, and ordinarily he did not produce enough to support himself. In the half century from 1800 to 1854, there were thirty-five years of crop failure; from 1891 to 1911, there were three famines and thirteen poor harvests. From 1918 to 1927, there were two famines and five poor harvests. The reasons were clear: the peasant landholdings were small and getting smaller. They were divided into small strips often miles apart; one-third had no iron ploughs and one-fourth no horses. Fertilizers were scarce, there was no rotation of crops. In short, Russian agriculture was in the fourteenth century. Nevertheless, the number of peasants increased from 15,000,000 in 1916 to 25,000,000 in 1926, who produced less food than the former number.

41-9-10

Not only that, but their land hunger increased. They had begun burning estates even before the Revolution, and driving off and murdering owners; after the Revolution, as men swarmed back from the front, they not only wanted more land, but changed from their traditional servility to sullen rebels. They supported the Revolution to get land and fought the Whites to prevent land from being taken away. They yielded more to their age-old vices of laziness, drunkenness, and greed.

It was soon clear to the leaders of revolution that the cooperation of the peasants could not be relied upon; to be sure they were sorely oppressed and wretched, but their one remedy was land. Once the state distributed the land they regarded it as their personal property to be used as they pleased. They resented taxation or advice or direction as to the sale of their crops or the prices asked. Moreover, the peasants were in three classes whose interests did not coincide: the poor, the rich kulaks, and the middle class farmers. Of these, the kulaks were dangerous and hated by all peasants. Stepniak said in 1895, "The distinctive characteristic of his class is the hard, unflinchingly cruelty of a thoroughly uneducated man who

has made his way fro poverty to wealth, and has come to consider money-making, by whatever means, as the only pursuit to which a rational being should devote himself."

Dillon declared in 1918, "Of all the human monsters I have ever met in my travels, I cannot recall any so malignant and odious as the Russian kulak."

Thus the future of planning was in grave danger. The peasants tried fraud by exaggerating the demand for seed and fodder and underestimating crops. When compelled to sell their crops at established prices, they reduced the crops and slaughtered their cattle so that 270,000,000 head in 1929 were reduced to 118,000,000 in 1933. Secret agents of the Ukraine independent movement living in Prague and Paris encouraged this opposition to collectivization. Partial crop failures in 1931 and 1932 aggravated this situation. The grain storing plan of 1932 failed; whole areas were left unsown and often half of the crop unharvested; a good crop in 1933 helped but there was hunger in many parts of the land.

The kulaks had the mentality of capitalists, enforced by ignorance and custom. The opportunity to cheat and coerce the poor peasant was broad and continuous. Stalin knew the kulak; his fathers had been their slaves for generations. He did not hesitate. He broke their power by savage attack. This revolution was more radical than in 1917, and Stalin knew it. "He walked the Giant's Causeway almost without halt or rest. Behind him were tramping the myriads of weary, and bleeding Russian feet."

In January, 1933, Stalin announced his plan of counter-resistance. The Party had expected the poor peasants to assent to collectivization without trouble, as they had all to gain. Some of the middle class peasants would consent. But others and the kulaks, who also carried on trade and money lending, had to be dealt with summarily. Something like a million families out of 25 million peasant families were removed. The ones thus treated were usually chosen by their fellow farmers

among the poor peasants and farm hands. There was much opportunity for envy and jealousy to work and government agents were later reprimanded for harsh action. But either this revolt against farm sabotage must be broken up, or Soviet planning would fail. Those who refused to cooperate were removed to distant places and put to work at road building, cutting timber or mining. It was hard, poorly paid work, and caused much suffering. But the result was that the number of collective farms arose from 20,000 in 1927 to 211,000 in 1933.

In such a village life differs widely from that of the old fashioned mujik. He is not confined to a small world in which cultivating his various strips of land with the aid of single horse was the practice. He has become a partner on a large estate and must adapt himself to large-scale methods of agriculture and the uses of all types of mahcines, many of which he had never heard of before. He goes through social and political, as well as economic changes, and he is involved in new experiences with his neighbors especially. The organization of work is naturally the most important.

There were a million ~~of such~~ kulak families in Russia in 1928, but of 25,000,000 peasant famili s, and the State proceeded to break their power. The proceedings involved force and cruelty. The kulaks reduced agricultural output, stirred up revolt and slaughtered animals, so as to bring a crisis in 1928 to 1932. But the state persisted. Large numbers were banished to Siberia and the struggle was won by 1934.

"Strong must have been the faith and resolute the will of the men who, in the interests of what seemed to them the public good,could take so momentous a decision." We may ask whether or not the Russian Revolution might not have been carried through with less blood and cruelty, with less appeal to brute force. We may believe that with all the gain from the efforts of Lenin and Stalin, most of it might not have been accomplished at lower cost to the decent instincts of mankind. But Russia answers and has right to answer, that

this revolution cost less in life and decency than the French Revolution, than the Protestant Reformation, and than the English Civil War; that the chief guilt for the high cost of communism was not the fault of Russia but of Europe and America which silently condoned the slavery of Russians for centuries and then at fabulous cost tried for ten years to reinslave them to the degenerate Czars and filthy priesthood. If the cost of revolution was excessive and revolting, the fault is certainly not to rest on Russia alone. For a people who have murdered, raped and crippled so many billions over the whole world for so many centuries suddenly to get sympathetic with thieves, liars, and criminals, does much more credit to their hearts than their heads.

41-9-13

We must remember that this problem of the farmer in modern life has been neglected to our cost. Here are folk who in every land have been physically by-passed by science, education and technique; they have in all lands been natural victims of exploitation and propaganda and in the automatic world market have been deprived of a decent income. In defense of their leaders, climbing ruthlessly to the top, enslaved workers and made common cause with urban industry. This has stopped democracy in France, Germany, Britain, and the United States.

In the Soviet Union, following the liquidation of the kulaks, began a Five Year Plan which proceeded with its industrialization and included collective farms and the development of heavy industry in coal, oil, electricity, blast furnaces, automobiles and machines. Coincident with this came a gigantic effort to send the millions of Russian illiterates to school. On a scale never before seen in this world, Russia in a generation turned millions of illiterates into a nation with ninety per cent literacy. It was a gesture which proved to the world that whatever mistakes Russia might make in the future, they would not be due to ignorance. The success of this effort hurried the Torgprom, into planned attack on Russia in 1929 or 1930. But the financial crisis spreading over the world, stopped these preparations while

the Russians proceeded into a second Five Years Plan from 1933 to 1938 devoted to the making of consumers goods and calculated to meet the sacrifice and unrest of carrying out the development of heavy industry.

Thus between 1917 and 1935, Russia carried through the three revolutions which took the attention of Western Europe from 1500 to 1900; the Reformation of religion; the control of industry and agriculture; and the authority of the mass of the people in government of the State. No one can compute the sum of human suffering caused by this triple revolution over so vast an area, in so brief a time, amid the most embittered civil war, supported by half a dozen foreign armies actually invading soviet territory. Yet the total cost was less than Western Europe paid. Whether the result was better or not, Time must tell.

It is not until after the event -- often long after -- that wise men can evaluate the contemporary scene. I realized this in the Desperate Decade from 1926 to 1936. We were passing through one of the periods of Boom and Bust which Marxian philosophy claimed was the inescapable destiny of the Capitalist system. I had lived through some seven depressions; that of 1873 I remembered, because of the huge silver dollar which my uncle gave me as a child and which was my first sight of real money. During the depression of 1893 I was abroad, and that of 1907 found me teaching and served to keep my salary at $1,200 a year or less. I now realize how differently business expansion and depression affect social classes; the rich and well-to-do, already comfortable, get unneeded income, resulting in luxuries and power; but the lowest class of laborers living below decent standards begin to get necessities when suddenly at the first sign of depression they are plunged into utter poverty.

Especially at this time, 1926 to 1936, I was eager to know much better than I did, just what "drastic measures" were being taken in high places to save the system of culture into which I had been born. Especially, I wanted to

learn, not only what was being done, but how these plans would affect the Negro peoples, not simply in the United States but in Africa; and I wanted to know what part Russia and Communism would play in the coming change. Like all Americans of that day, I was tremendously influenced by Leon Trotsky and the propaganda he was loosing on the world. I did not realize clearly just what w as happening in the Soviet Union and the press was not helping me or the public. The most extraordinary tales of the Soviets were current. The series of trials of saboteurs and traitors, from 1930 to 1937, were pictured in the press as false persecutions with savage punishments. The Soviets had sought to open the doors of the nation by an Intourist plan with new hotels and guided travel. But incensed by the lurid reports of our press, the Soviet Union began to lower the "Iron Curtain" and go its own way in grim silence. But that left the world with almost unanswered propaganda,and many like myself were sorely puzzled. Several leading American liberals,formerly sympathetic with the Soviets,withdrew into silence or active opposition. I was puzzled but not convinced. I knew only too well what the American and the European press could do with facts, when they related to black folk or to brown and yellow; or to any unpopular or threatening minority.

41-9-15

But with most folk, I had been caught with Trostky's brilliant qualities and thought of him as embodying the revolution next to Lenin himself. I looked on Trotsky as typifying the Revolution. But his full career was partially hidden. Of it, I learned only long afterwards.

No complete study of the extraordinary personality of Leon Trotsky has yet been undertaken. He was convinced of his mission to lead the world to c ommunism. To his egocentric mind, he was not betraying Russia but leading it to head world revolution; he was not selling himself to the Germans but deceiving the dull Teutons into delivering themselves into his power; he was not surrendering to capitalism but inducing capitalism to establish communism. It all worked back to his fanatical belief in his own wisdom and cunning

and it all made him one of the great traitors of history.

He began with "My Life," a fictionalized account of his career as the real leader of the Russian Revolution. This was followed by four other books and a stream of articles, which found world circulation, as grist in the mill of reaction and threw confusion into the ranks of the friends of Russia. The campaign raged through the Great Depression, confusing the thinking of liberals and running consecutively with Fascism in Italy and Nazism in Germany. Trotsky's son, settled in Germany, got into connection with the Germanetechnicians and engineers working in Russia and with the German spy service. Sabotage on the new Russian industry was organized. Secret terrorist calls, composed of all the varieties of enemies of the revolution, spread.

In 1933, when Hitler came to power in Germany, Trotsky moved to France, with the blessing of Daladier, and got in touch with the Nazis through Hess and Rosenberg, and with soldiers like Tukhachevsky of Russia. Back of Trotsky began to gather an extraordinary aggregation of czarists, reactionaries, Fascists, liberals and dissident radicals.

Dangerous evidences of this world plot began to appear, strengthened by the success of the Russian Five Year Plan and the increasing prosperity of the Soviets in the midst of the industrial crisis elsewhere. The next year Japan was drawn in, and things began to happen. In the coal mines of Siberia accidents became common and an engineer who reported this was found dead. Molotov, then chairman of Commissars, was nearly killed. Trotsky gave orders for the assassination of Stalin, Voroshilov, the Commissar for War and Kirov; most of the ~~several~~ attempts miscarried, but Kirov, one of Stalin's closest co-workers was murdered in December, 1934. Several arrests were made but the real conspiracy was not then unearthed.

A series of fiendishly clever murders by physicians' collaboration culminated in the death of Gorki in June, 1936. In October, 1935, Mussolini invaded Ethiopia; sabotage efforts, directed by Germans and Japanese, in

cooperation with Trotskyites, spread in many parts of Russia, in mines, railroads, power plants and construction jobs. In June, 1935, Leon Blum's Popular Front government forced Trotsky to flee to Norway where he settled near Oslo, and near Major Vidun Quisling, who also was attacking Russia.

Trotsky became impatient. He ordered Radek to cooperate with the Japanese and Germans, proposed territorial concessions to Germany and the entrance of capital from Germany and Japan for exploitation. In return, he reported "an absolutely definite" agreement with Hitler to establish the Trotskyites in power in Russia. He said war would come in 1937.

The Soviet Government was aware of the conspiracy but it had long and carefully gathered its case. In 1930, eight members of the industrial party were arrested for conspiracy and sent to prison. Next year, fourteen former Menscheviks were accused of sabotage and of receiving 500,000 rubles from the Torgprom and other sources. They were all found guilty and imprisoned. Then in 1933, six British and ten Russian engineers were arrested and charged with sabotage for the British Intelligence Service. The Russians, with one exception, were all found guilty and sentenced to prison terms. One British subject was acquitted and the other five found guilty.

41-9-17

In the summer of 1936, the Soviets began to strike hard. In August by retrying Zinoviev and Kamenev with new evidence, they started the first of the celebrated Moscow trials and sentenced 16 to be shot. They then arrested Radek and three others and removed Yagoda. In January, 1937, they sentenced Radek and three others to be imprisoned and thirteen to be shot. Later they tried Tukhachevsky and sentenced him and seven generals to be shot. Finally, in the last of the Moscow trials, they shot Yagoda and eighteen others and imprisoned three.

The trials were fair and the testimony overwhelming. The American Ambassador wrote to the Secretary of State: "I talked to many, if not all, of the members of the Diplomatic Corps here and, with possibly one exception, they are all of the opinion that the proceedings established clearly the

12

existence of a political plot and conspiracy to overthrow the government. But America and the Western world were given the idea that all this was simply Communistic brutality."

This judgment was bolstered by the final efforts of Trotsky. Forced to leave Norway in 1936, he fled to Mexico, and from there spread world-wide propaganda. He enlisted wide American sympathy and cooperation, and was welcomed to the best magazines and periodicals. A Committee of Defense, with prominent names was formed but the hearings produced nothing beyond Trotsky's own testimony. He tried to enter the United States and testify before the Dies Un-American Activities Committee, but did not succeed. He was killed by a colleague in 1939 in a dispute over a woman. The Soviet Union was accused of responsibility for this crime.

81-6-14

This story I knew, only in part in the early thirties. All the liberal magazines told the facts as Trotsky gave them. Even radicals, like Max Eastman, spread tales which history fails to substantiate. I found myself at the time wavering in mists of knowledge, and I was upset by Trotsky's exile; by the treason trials and by the repeated assurance that the whole Soviet system was on the verge of collapse. But my former visit to the Soviets did not let me believe all I heard. I was the more eager to see the Soviet Union again, and, also, to see the world -- this side and beyond it.

While I was writing my interpretation of the Reconstruction period in American history, I was seeking also a chance to spend some time in Europe to see first-hand what was happening. I had no funds of my own to spend for such an investigation. No institution seemed prepared to finance me, especially as I could not guarantee to what conclusions I might come. I did, however, center on Germany as the key area for study, because I knew its language, people, and culture best; and because I was convinced that Germany was a critical point where the fate of modern culture would be settled.

From Germany my observations could extend to Russia and I had a dream that by some legerdemain I might even view Asia.

I started by getting in touch with the Karl Schurz Foundation which was furthering German-American Friendship. I asked in 1931 for the opportunity to go to Germany and make contact with those organizations which in the past and at present were interested in German colonies, particularly in Africa, and which represented the liberal and progressive spirit. The Board declined, saying in 1932: "We realize that you are in a position to make such a study as you propose making...However, our most effective contribution to the welfare of the American people seems to lie in other directions." But they had under their administration the Oberlaender Trust which offered fellowships for study in Germany and the Secretary wrote me in 1934 suggesting that I might make a study of Black Troops in Germany. I eagerly assented, but nothing more was said, until I called on the Secretary in Philadelphia. On his advice in 1935, I asked to "investigate Germany and Austria and the relation of education to industry."

41-9-19

As a result of this request, I was granted $1,600 for six months study in Germany during the year 1936. By teaching in summer school in Atlanta, I arranged a semester's leave of absence with pay in the Fall, and I planned to stay four or five month's in Germany and spend the balance of the leave in Russia and, if possible, to return by Japan and China.

I knew as I left America in June, 1936, something of what had happened to the world. European culture in the nineteenth century had rested on four institutions:

1. Peace between the Great Powers
2. A world market regulated by the international demands of trade
3. A gold standard for prices regulated by international High Finance
4. Wide freedom of initiative in industry for the white world

Peace among the great powers did not spell peace in the world. Between 1815 and 1915 there were over a hundred wars for acquiring colonies, expanding

spheres of influence, crushing revolt in colonies and intercolonial strife; but the relations between the Great Powers was at least stable enough not to interfere seriously with the world market, the gold standard, and industrial free enterprise for those who controlled world industry. Through this arrangement, the white people of Europe and North America gained control over the darker peoples of the earth. This economic imperialism was not democratically controlled nor did it involve i ndividual freedom. On the contrary, the industrial organization was increasingly an oligarchy, the darker peoples were serfs without land control, and even in white nations democracy was limited to certain political areas and was excluded from the vital areas of industry. Freedom of individual action was decreased by the rise of Big Business, monopoly and industrial combination, and international colonial imperialism.

41-9-20

The break in this system in the twentieth century did not come from revolt of the darker races, so much as from jealousy among the leading white nations over the division of profits, especially from the world market and the control of colonies. Germany, Italy, and Japan were insisting on a larger share of colonial empire and equal voice with Britain, France, and the United States in the world market and high finance.

The result was the First World War, with Germany and Italy fighting for colonies against the great colonial powers and the United States and these allies securing the cooperation of Japan, whose price was recognition as copartner and equal of the dominant white European powers. This war disrupted the industrial organization on which the nineteenth century rested. The world market and the gold standard ceased to function and Russia came forward to challenge industry by planned economy and the raising of workers' share of income.

After the war, desperate effort was made from 1918 to 1929 to restore

the world market and the gold standard; and to resist Communism in Russia. It was the irony of fate that just as Western Europe was practically united to overthrow Russia by force of arms, the system of culture which had lifted these nations to world dominance during the nineteenth century, built originally on Negro slavery in America, the cotton kingdom, and the Industrial Revolution, and then on the factory system, world commerce, and colonial imperialism, crashed in unprecedented ruin.

None in Europe, however, doubted but what the collapse was temporary, caused by war and destruction and capable of restoration within a reasonable time. From 1929 to 1939, every effort was made to accomplish such restoration. But in Italy and Germany the methods adduced were disconcerting to Britain, the United States, and France; since they were frankly socialistic in method and propaganda.

Socialism is state control of industry through a planned economy. Usually social theorists have assumed that the chief if not sole beneficiary of socialism, would be the mass of the working class of the socialized nation. But German state socialism under Bismark and his successors had shown that a state economy might be partially socialized for the benefit of landlords and a hereditary nobility and only in part for the benefit of labor. And now came Mussolini and Hitler with a socialized state, in which again, labor was only a partial beneficiary, while the bulk of the benefits went to a ruling oligarchy with a dictator. This was a step toward a socialism under complete control of labor, with the workers as the only beneficiaries. Neither Britain nor France; nor indeed Italy or Germany believed such a state could succeed; but if two dictators, who were themselves little more than ordinary artisans, could seize and successfully conduct a planned state for the benefit of any group, the next step would certainly be the overthrow of the dictators and the attempted rule of the mob. Temporarily it

was reassuring that in both Italy and Germany, the power behind the dictators were the owners and managers of industry. This organized industry recognized and applauded the dictatorship; capital was protected; profits were maintained and factories and railroads efficiently run. But what of the future? Who would succeed Hitler and Mussolini and their gangs? Would industry always be able to control such men, especially when these rulers were paying such prices for labor support in full employment, good if not yet high wages and endless and increasing outlay for housing, roads, public entertainment social security and the like? Where was all this to end and how was "democratic" control of the state, i.e. control by industry under current forms of indirect rule by wealth--how could this be restored before this dictatorship got into the wrong hands?

41-9-22

Those who believed a limited and controlled democracy consistent with free capitalist industry were aghast at the dictatorship of the Fascists, but attracted by their growing concentration on the conquest of Russia. While the Fascists were torn by greed for the resources of Russia and hatred of the colonial monopoly of France and England.

In the midst of this persisted the doctrines of Communism. The Soviet Union was saying that industry under free individual initiative was slavery and anarchy; that it reduced the worker to slavery; took over his contribution

to wealth as private profit and led directly to industrial crises and war. To remedy this a planned economy was needed based on scientific study and measurement of human action and aimed at distributing the results of work among men justly and not by chance or force.

There is, of course, strange contradiction between the concept of human life as ruled by natural law and subject to the same law of evolution and development as the material world; and the concept of human life as ruled not only by law but by that interruption of law which allows life to be guided in certain directions and thus places responsibility for the outcome of life upon those who can exercise this power of choice. But singularly enough, those like Karl Marx, who insist on the rule of natural law in human action also stress the duty of man to change conditions of life; and who stress the freedom of human action, rely on natural law always to bring good and order out of the unregulated actions of men.

41-9-23

The understanding of this paradox lies in the fact that there is as yet no reality back of the ideas of Cause and Freedom to which we can appeal: to assert the universality of Cause does not explain its mystery; and to stress freedom of action, does not explain its inner contradiction. We are thinking beyond experience and our only appeal is not to logic but to experiment: if increasingly exact and long continued observation and measurement of human action, reveals an inexplicable and irreducible element of the Unpredictable, or as exact science would put it ~~must say~~, Change; then scientific hypothesis must say, here lies evidence of that miraculous freedom of action which is the Uncaused Cause of a certain human deed and of development of human life and, perhaps, of other manifestations of Life.

The science upon which Karl Marx relied for knowledge of human action, was exact planning and measurement, guided by the hypothesis of the possibility of deliberate change but always checked by the meticulously observed fact; leaving to a more instructed age and much fuller knowledge the possible explana-

tion of what is today the inexplicable paradox. Here lies the task of Sociology, which the Western World shirks and which only the Soviet Union and its followers have assumed on a scale adequate to real scientific advance in the paradox of human deed.

In the midst of this embittered calm which was prelude to another and even more horrible world war, I returned to Germany in 1936, after a lapse of forty tragic years since I first saw the Rhine and walked the Unter den Linden. I had strong affection for Germany, because in the days of my Sturm and Drang, this was the land where I first met white folk who treated me as a human being. At the time it bolstered my faith in the world and gave me strength to face and fight its wrongdoing.

41-9-34

The plan for restoration of European economy after the war was based largely on the restoration and development of colonial imperialism. But this could not apply to Germany. Even if Germany recovered her lost colonies -- and this she proposed to do -- she would still not have space and resources to support her economy and enable her to rival Britain, and France. Only larger colonies torn from England and France could do this and such a plan was costly even if any way possible. But there was another possibility and that was occupation and exploitation of the Russian Heartland. This was doubly attractive, because by such a venture the demands of German capital and labor could both be met and the menace of Communism destroyed forever. The lure of the program was all the greater because of the economic history of Germany since the First World War. Wealth and power in western Europe had been shaken but not overthrown. In Germany it had been shattered.

There were three points of view in Europe: the British, which was to restore the industrial system of the nineteenth century by keeping her colonial empire, and increasing the profits made there on cheap labor and raw materials but yielding larger share of this profit to home labor, so as to temper their rising demands. The sale of British manufactures to the rest of the world would

return to normal if Britain could continue to undersell competitors.

In the case of Italy, Britain had egged the Italians on when the Black Mahdi drove the Egnlish out of the Sudan and Italy attempted to annex Ethiopia. She was soundly thrashed at Adua, but was offered by England in 1906 a free hand in 1906, to try again, as price of her entrance on the side of the Allies in the First World War. The Congress of Versailles refused to honor this promise and when Mussolini saw his opportunity, he invaded Ethiopia as the one way to restore Italian economy by making her a colonial power. I was in London when Anthony Eden stood before the House of Commons and announced England's decision not to oppose Italy. This defied the League of Natinns, but it increased the imperial power of colonialism and might help save the economy of the British Empire.

11-9-35

Belgium is a third case illustrating the plight of Europe in 1936. I stopped in Belgium to see Tervourien again. I had seen it in 1921, at the Second Pan-African Congress. It was perhaps the greatest single collection of Africana in the world. Berlin and London have valuable collections, and even the one in Dresden, which I saw is better than anything we have in America. But this whole museum, with its beautiful building and magnificent park, sets its own false note when it begins, in its first room with an exhibit of the exploitable riches of Africa. The Congo, fourteen times the size of Belgium, has from the first been and still is regarded primarily as a profitable investment for Belgian and European capital. The worst outrages of capitalism have been curbed at the demand of humanity the world over. Missions are at work and restraining laws have been enacted. But the chief end of the Belgian Congo is today as it was under Leopold I: to increase the private fortunes of Belgian capitalists. And if Belgian labor is today in a sorry plight, it is because in the day when Socialists ruled Belgium, they could not see that the cause of the black slave in the Congo was one with that of his white fellow in Belgium. I talked of this to Emil Vandervelde before the World War I and after,

in America and Europe. His reply was to cite the new laws to curb capital in Africa. But what are such laws when they are dictated by investors in the interest of their own incomes?

And consider the human beings whose well-being Belgium is thus neglecting: magnificent physical specimens, as the great museum at Tervourien attests. Men of taste and skill. Men with a history, capable of all human advancement. Yet in 1936 few black men of the Congo were attending any Belgian University; not a single Congolese had a legal right to an acre of his own soil which the State had seized; not a single one had any political power to dispose of the immense annual wealth created by his labor.

41-9-33

Out of the Congo was coming increasing tons of copper and tin, together with oils, ivory, cotton and all fibres. The wealth of Belgium is primarily the wealth of black Congo, and that wealth is being used to curb the labor movement in Belgium and everywhere else it can.

Before 1914, Germany was planning a gigantic industrial machine. With a carefully planned economy, led by the best engineers of a new technical age, she was planning to become the greatest manufacturing nation of the world. In 1913, she was making nearly a third of all the world's machines and her methods and organization were the wonder of the world. The clouds in her sky were the industrial rivalry and monopolies of England, France, and America, and the growing demand of the working classes for a larger share of the product of labor, which in the teaching of some amounted actually to the abolition of all private profit and the ownership of capital by the state.

The German State before World War I had apparently yielded to this by becoming partner in gr at industries like steel, chemicals, shipbuilding, transportation, and communications; and Germany spent more for research in industry than any other country. Over this state, however, ruled the landed aristocracy, through the managers and engineers who formed perhaps the most powerful trade union in the world. Such industrial combinations, backed by

~~Moon 1936 Cult~~
1936 Truth - MS

MS. Rec'd Aug

the state, were necessary, if Germany was to enter modern industry in competition with England and France. She, therefore, entered international commercial combinations, cartels, export unions and finance consortiums. The First World War was fought to extend these industrial forays into the colonial and semi-colonial areas of the world, dominated by Britain and France. Defeat was revolution.

42-2A-63

When a group or a nation acts incomprehensively, the answer lies in a background of fact, unknown or imperfectly comprehended by the onlooker. So it is in this case. Germany reeled under five blows, 1914 to 1933, which no people can experience and remain entirely normal. These were: War, the Treaty of Versailles; Inflation, Depression, and Revolution. There is a war monument in Hamburg which is ~~the~~ a most eloquent and ghastly memorial ~~I have ever seen.~~ It is a square straight shaft of gray granite, and it says simply: "40,000 sons of this city gave their lives for you in 1914-1918." Forty thousand dead youths from a single German city!

Then came a treaty of peace which was no less than devilish in its concealed ingenuity. One might agree in blaming the expanding industry of Germany for the war, although this is by no means ~~as~~ so clear today as it once seemed; but who of the laymen knew or dreamed that what the Peace Treaty did was so to hamstring German industry as to make the earning of a living in Germany so difficult that bankruptcy followed on a scale that was revolutionary? The treaty deprived Germany not simply of one-eighth of her territory, population and arable land, but what was far more important, of a fifth of her coke; three-fourths of her iron, one-fourth of her blast furnaces, two-thirds of her zinc foundries, one-fifth of her livestock, all of her merchant marine, and most of her railway equipment. And then saddled her with a debt based on unheard of principles, which no land could or did pay. In other words, in order to establish peace, the industrial masters of England, France, and the United States made the orderly return of Germany to work and self-support

impossible without internal revolution.

This revolution meant a redistribution of wealth and income in Germany comparable only to the French and Russian revolutions. The people in Germany who paid were the thrifty, the workers, the civil employees, the very classes who had opposed war in the first place. And the persons who bore the brunt of criticism in Germany for the treaty were the labor unions, the teachers, the middle-class who hated war and wanted to build a new state, above the power of capital and the army. Adolf Hitler rode into power eventually by calling the government of Germany, which negotiated the Treaty of Versailles, traitors who stabbed Germany in the back when she was down.

Germany not only had the flower of her youth murdered in a senseless war, but she had her bread and butter taken away in an equally senseless peace. The accumulated savings of the nation disappeared; pensions, in a land of pensioned civil servants, were stopped; loans were paid in worthless money; property values dropped to nothing; industry was in bankruptcy and labor out of work. She struggled up and partially out of the morass, but when depression settled upon the world, Germany was worse off than others, because she was hopelessly in debt, and by the unanimous decision of the world not allowed to pay her in the only possible way -- by the export of her manufactures.

Moreover, back of all this, the role of Big Business must be remembered. Organized Industry remained powerful in Germany because of planning or as it was called "rationalization." This planning was for the owners of industry and not for the worker; it first rationed production in the heavy industries; then it reorganized plants and businesse, specialized the plants, closed down badly located and poorly equipped plants and scrapped old buildings and old equipment. This industry could do because inflation wiped out their debts and allowed a small number of wealthy organizations to accumulate huge properties. Next industry began positive plans for scientific technique and equipment in every avenue of production, distribution, and consumption.

All this seemed in line with the plans of the Socialists who as modified Marxists were ruling the state under the Weimar Constitution. They helped industrial trusts, cartels and combinations under government control, and a national economic council. But they could agree on no plans for control of private industry, which had raised a few industrial leaders to great power. The workers demanded higher wages and increased taxation for social service. By 1928 the taxes took 27 per cent of the national income and reparation payments absorbed much of this. Tariff walls and colonial ownership by others kept Germany from selling her goods abroad. The depression turned Germany into a socialistic state, with the problem for what class this state was to be run.

Had the German workers had a different training and leadership, Germany would have become Communist. But her labor leaders quarreled and some of the best of them were deliberately murdered. Thereupon industry made desperate effort to save German capital investment. They yielded to socialism -- they had to, for the German state was already a large owner of capital. But they sought to build a national German socialism, to avoid international working class movements, and to save capital and private profit by yielding enough to the German worker to keep him quiet and satisfied.

Here came Adolf Hitler, a psychopath and a dreamer, with delusions of grandeur, frustrated by poverty and war; ruthless in his idealism, bold, cunning with a voice of brass and a knowledge of the human soul; this was the instrument which the captains of German industry picked out at the time of his defeat and despair to become master, not only of Germany but of Europe, and at one time near-master of the modern world.

Hitler was an artisan. He came from a part of Austria where the anti-Jewish feeling was strong, and his own economic rivalry with Jews as a worker had strengthened this. Here was an asset which would appeal to artisans, small shopkeepers, and racial fanatics. He was a popular orator just at the time that the radio and loudspeaker made speaking a possible state monopoly. In

1931, the financial collapes engulfed central Europe, and,in 1932, there were 7,000,000 unemployed in Germany.

Then came hope, although desperate hope, in the rising National Socialists, led by Hitler. The country was near anarchy. The next years although still a minority, the Nazis attacked Jews, burned the Reichstag building and took power. Germany was revolutionized from a federation of largely independent units to a centralized dictatorship of a singularly constituted group of adventurers. They did away with political parties; they changed legal procedure and courts; they attacked the churches; they opened labor camps and eliminated unemployment; they built an army by restoring universal military service and allayed unrest by an ambitious youth movement.

In June, 1934, Hitler killed seventy-three of his followers so as to eliminate radicals who were set to attack property and capital,and his followers killed Dollfus in Austria, who represented reaction toward the right. Now Hitler was prepared to rebuild the army and navy, he made naval agreement with England and seized the industries of the Saar. I arrived in Berlin just before the last act of this drama occurred: the Berlin-Rome axis and the recognition of Franco's Spain.

Revolution was staring Germany in the face, and a Marxian revolution which would make a dictatorship of the proletariat in a socialistic state. Industry was frightened, the Junkers (landed nobility) were frightened, the manager, engineers and small shopkeepers were frightened; they all submitted to a man who had been at first a joke, then a pest, and now who suddenly loomed as a dictator. Union labor, with its 8,000,000 members, holding the wide balance of power in the state, proceeded to squabble as to whether to usher in the millenium immediately or gradually, and through this squabble Adolf Hitler and Big Industry drove a carriage and four.

Hitler set up a tyranny; a state with a mighty police force, a growing army, a host of psies and informers, secret espionage, backed by swift and

cruel punishment, which might vary from loss of job to imprisonment, incommunicado and without trial, to cold murder.

But this was not all that Hitler did. Had it been, he and his state would soon have disappeared. He showed Germany a way out where most Germans saw nothing and he made the vast majority of Germans believe that his way was the only way and that it was actually leading to the promised land. Nine out of every ten Germans believed this in 1936, and as long as they were convinced, they were going to uphold Hitler.

The philosophy of Hitlerism is not logical nor complete. Based on the old German idea of the state, it declares that the state and not the working class is the real unit to be developed. All opposition to the state must disappear. The interests of capitalist and worker are one. They must, by superior authority be forced into unity, and then the resultant state must be conducted in the interest of all. Moreover, this new state which Germany was building was something holy and superior. It is composed of pure Nordics, with no contamination of Jews nor of inferior races. Its in-born superiority was proven by history and experience. Germany was not beaten in the World War. She fought fourteen nations to a standstill, and only succumbed when her own people betrayed her. This must never happen again. The new Germany must be one. This unity means national health, a living wage, public works, a planned economy with workers trained to fit into the plan, and capital subservient to the great end of building a united and happy people. The success of this plan depended on a strong government, obeyed without discussion or argument or hesitation, with the power in the hands of a supreme Leader, who ~~today is~~ was Adolf Hitler.

To secure such a government, and keep it in power, it is only necessary for the mass of the people firmly to believe that the thing works; that the Nazi state is doing what it promised and nearing its goal. Part of the work of a community or government is too subtle to be easily seen or measured. It is

here that Propaganda comes in. The greatest single invention of World War I was propaganda: the systematic distortion of the truth, for the purpose of making large numbers of people believe anything authority wishes them to believe, grew into an art, if not a science.

Nowhere was it used to such tremendous advantage as in Germany. Newspapers, public speakers, the radio, expositions, celebrations, books and periodicals, every possible vehicle of information and training, including schools, were used on German people to teach them that they are the most remarkable people on earth; that the national socialist government is the best government for Germany, if not for the world; that other countries, especially Russia, are in the depths of misery, and that Jews are responsible for all criticism heaped on Germany and for most of the other ills of modern countries.

Adolf Hitler hardly ever made a speech -- and his speeches reached every corner of Germany by radio, newspaper, placard, films, and public announcement -- without belittling, blaming or cursing Jews. From my window as I write I see a great red poster, seven feet high, asking the German people to contribute to winter relief of the poor, so that Germany will not sink to the level of the "Jewish-Bolshevist countries of the rest of the world."

At Nuremberg he accused the "foreign Jewish element" as causing the rotting of the Aryan world. His propaganda minister was more insulting, and said that the whole oppression of Germany by the world was caused by Jewish emigrants. Every misfortune of the world is in whole or in part blamed on Jews: the Spanish rebellion, the obstruction to world trade, and so on. One finds cases in the papers of Jews jailed for sex relations with German women, a marriage disallowed because a Jewish Justice of the Peace witnessed it, Masons excluded from office in the National Socialistic Party, because Jews are Masons; advertisements excluding Jews, the total disfranchisement of all Jews; deprivation of civil rights and the inability to remain or become German citizens,

42-29-67

limited rights of education, and narrowly limited right to work in trades, professions and the civil service, the threat of boycott, loss of work and even mob violence for any German who trades with a Jews; and, above all, the continued circulation of Julius Streicher's Steuermer, the most shameless, lying advocate of race hate in the world.

Germany in overwhelming majority stood back of Adolf Hitler in 1936. Germany had food and housing, and was on the whole contented and prosperous. Unemployment in four years had been reduced from seven to two millions or less. The whole nation was dotted with new homes for the common people, new roads, new public buildings and new public works of all kinds. Food was good, pure, and cheap. Public order was perfect, and there was almost no visible crime. And yet, in direct and contradictory paradox to all of this, Germany was silent, nervous, suppressed, it spoke in whispers, there was no public opinion, no opposition, no discussion of anything; there were waves of enthusiasm, but never any protest of the slightest degree.

41-9-32

I came to Germany to learn, among other things, something of industrial education as carried on in a country where the industrial and technical development has been greater in the last fifty years than in any other land on earth. What Germany has is not Industrial Education, but Education for Industry. Or, in other words, Germany in general was not seeking to use industry and industrial processes as a means of education, but,on the contrary, was using education as a means of carrying on and perfecting industry.

The electrical industry of Germany, and of a considerable part of Europe was divided in 1936 between two great German corporations, of which Siemens is one,and the oldest and largest. It represented a capital of a billion,000,000 and employed over 60,000 of the most highly skilled workers of Europe.

Werner Siemens was the German Ford, and his great concern made telephone and telegraph apparatus, railway and police signals, electric motors, locomotives, refrigerators, radios, electric light bulbs, and what not. It had

sixty-three branch offices in Germany and branches in practically every European country, including England, France, Italy, Belgium, Holland, Spain, Portugal, Switzerland, all of Scandinavia, Austria and the Balkans, and it had close working agreements and exchanges of patents with the electric industry in the United States.

In other words, I walked this morning into one of the most powerful centers, not only of world industry, but of social and political power. Few states in the United States exercise the power of Siemens-Stadt, and the United States government itself feels its power. I came here to ask how are the citizens and workers of this Industrial state trained, and by whom, and what role does the State play in this education?

41-9-28

Among the buildings of the industrial plant of Siemens City, standing cheek-by-jowl with its factories was a large seven-story building. It is built in the same style as the other factory houses, and indeed does some of the actual productive work of the factory. But the chief aim of this building is to produce a human product of the most careful and precise nature which can be used in the productive processes of this mighty industry. Here, then, at the very forefront stands out the meaning and method of industrial training in Germany: what one sees here is not Industrial Education but Educational Industry. That is Industry taking up Education as an industrial process. Nor does this imply something entirely mechanical. When Industry uses cotton, it studies cotton, experiments with it; it does not try forcibly or ignorantly to treat it like wool. So with men. Knowing exactly what it wants men for, Industry proceeds with painstaking care, endless experiment and expert training and delivers a finished product, which is unsurpassed in the world for efficient, delicate, precise, and regular workmanship.

I went to the schoolroom -- a long, light hall, with work benches and machinery and a part of the 150 apprentices which Siemens takes each year. They are selected from grammar school graduates of first year high pupils

and must have done well in school in all of their studies. Other things equal, the children of employees get the preference, and the supply enables the school to select only the very best material. Those I saw averaged from twelve to fifteen years of age. Th course is four years. An entrance test is given -- written, mechanical, and psychological. Then comes a general year of seeking the ability of the student and his fitness for the various branches of work. Then three years of work, hard and exacting. The spirit is remarkable, and no wonder; these students do not pay, they are paid to study -- not much, to be sure, but an increasing part of their living expenses as they progress. They are entering on a life work and will live and be pensioned and die at this job.

41-9-29

Having now a skilled working class, educated for specific life work, how far could democratic control of the state be entrusted to their hands? Not far, if industry in Europe was to be conducted by a closely knit oligarchy for the support of a wealthy class to whom the bulk of the income and consequent power was to be concentrated. Such democratic power as the working class possessed in Britain and France was confined in various ways to choice of officials and local matters. In the great matters of the distribution of finance capital, industrial aim and organization, colonial administration, neither of these nations were really democracies. However, any insistent demand from the workers, particularly through their increasing trade unions, must be heeded; and since these unions' demands were mainly wages, which must be taken from profits, wages and conditions of work had to be improved. The most spectacular development in this direction had been in the United States where the standard of living of labor had reached the highest level in the world, but still American industry was not democratic, and high income was due to natural resources and free trade. In Britain and France, the comparatively wage had been made possible without lowering profit by ownership of colonies with their serf labor and land monopoly.

If postwar Germany was to equal Britain and France in industry, with equally high profits, it must have colonies; and not merely the lost colonies which were small,but larger colonial territory. This might be secured by concessions from Britain or France in the face of a new German army and navy. Or colonial territory might be taken from conquest of Bolshevik Russia. This was a growing aim with the Hitler regime and with the Reichswehr power which preceded him. It was for this that they bribed Trotsky.

When the Trotsky conspiracy failed and the Soviet Union moved successfully into the Five Year Plans, Germany began furious propaganda against the Soviets. In 1936, Hitler and his followers denounced Communism, recounted its crimes, and foretold its inevitable failure, and,at the same time, imitated nearly every method and adopted theoretically nearly every goal that Russia had followed or announced.

41-9-30

The longer I looked at Hitler's Germany, the more I realized that it was a socialistic state. It was copying the Soviet Union in innumerable ways: its ownership and control of industry; its control of money and banking; its steps toward land ownership and control by government; its ordering of work and wages; its building of roads and homes; its youth movement; its one-party slate at elections. In certain respects it differed from the Soviets: while the State controlled industry, the state itself was controlled by a clique. That clique was financed by industry but industry did not control it; it controlled industry through the state. There was no suggestion of democratic control of the state; rather, that was openly repudiated; the system of education was curtailed, rather than enlarged, and aimed increasingly at service to industry.

At first, Europe and America applauded Mussolini and Hitler on their states. Industry saw in them an answer to Communism. Then doubt obtruded. If these dictators continued to control industry, how would industry emerge and with how much autonomy? Was socialism under a dictator, the answer to

Communism under mass dictatorship as in the Soviet Union? Were either preferable to the anarchy of individual initiative, even when that initiative was being centralized under group control?

Indeed, was not fascism simply another form of socialism, rather than an answer? Meantime, Hitler's own answer was to attack the Soviet Union and revile and decry its every effort.

I saw Hitler in 1936, at the zenith of his power, and his one final word then was, "Conquer Russia; overthrow Communism." I was astonished to find Russia so in the center of European thought. In my own mind, Russia was significant, important. But I thought of its problem as local and national, of tremendous importance to the world if it succeeded, but no threat, rather an experiment, a dream yet to be realized or to die with noble memories. But in Germany in 1936, Russia was a fact; an accomplished experiment, so successful as to pose the immediate question of acceptance by modern culture or violent uprooting by every means. Britain was an enemy, but an enemy to be copied in success and method. France was an ideal which needed only German science. Italy was an ally. But Russia was something threatening which must be put under German control.

42-2A-68

X

And now from Germany, where I ~~have~~ had been made repeatedly aware of the pervading and growing influence of the Union of Soviet Republics, I turned with renewed interest and curiosity toward the East. Around me were ominous occurrences. Indeed, the whole world situation was so confused that I could not grasp all of its ramifications and meaning; Japan was secure in Manchuria, and to my mind then, Japan was the hope of the colored world. The New Deal of distinctly socialist legislation had begun in the United States. In 1934, the European unrest had increased. The King of Yugoslavia and the French Cabinet Minister, Barthou, had been assassinated. Italy was in Albania, and Hitler had visited Rome. In December, Stalin's friend, Kirov, was murdered, and Italy, in Africa, had begun aggression on Ethiopia.

There was sabotage and murder in Russia to halt the Soviet program in 1935; the war in Africa continued, despite the insincere efforts of the League of Nations; and the Soviets sought alliance with France and Czechoslovakia. Britain consented to German rearming; a German-Japanese attack on Russia was planned, and Trotsky in Norway plotted to yield territory and capitalistic concessions in Russia to Germany.

In 1936, the year I was in Germany, Ethiopia was conquered, civil war broke out in Spain, and Metaxis made his coup in Greece; another treason trial took place in Russia, and Hitler furiously denounced Bolshevism at the Nurernburg meeting of the Nazis. I heard its echoes all over Germany with reproductions of charts showing alleged wretched conditions of the Soviet workers. A great colonial exhibition was planned for Breslau and I saw the exhibits; but news of it was suppressed outside of Germany.

41-9-31

I wrote to the Soviet Union for permission to visit the country, especially to see and study the interracial situation, and,also, to pass through the land on my way to China and Japan. Also, I wrote Radek, telling him of my plans. This was not wise, since Radek at the time was deep in the Trotsky conspiracy and early in 1937 was convicted. At any rate, my request to stop for study in Russia was not granted, but passage through to Manchuria was permitted. I then wrote my friend, Mrs. Williana Burroughs, an American colored woman long connected with the Moscow Daily News, but she replied, "I made inquiry right away as to what could be done about the visa. I was informed that it would be quite impossible to change this decision. It is not as easy as formerly to get permission to come here." She added, "I really believe,as I told you in my last letter, that with the short time at your disposal, and with the people who could help you so occupied, it would be quite useless to try to cover so large a subject as the position of the minority groups in the Soviet Union. On the national policy of Soviet Russia, which has international meaning, such a structure of well-being and

new life has grown up, that six months could well be devoted to it.".

Afterward, I understood better why the Soveit Union was not welcoming visitors, especially from the United States and enroute to Japan. This was for Russia a time of trouble and her experience in seeking to attract visitors through the "Intourist" organization had been disappointing.

So I started ast, with promise of but short glance at Moscow, but a long ride on the Trans-Siberian railroad -- 4,000 miles in ten leisurely days, with frequent stops. Moreover, on this trip I had the advantage of many reports and studies on Russia made during the last decade; the monumental study by Sidney and Beatrice Webb; the British Trade Union report; the Brailsord pamphlet and numbers of essays and articles. I determined to examine these for background, adding to them conversations and all that I could see.

41-9-57

I glimpsed Poland but dimly, passing through on the express from Berlin. Warsaw rose mistily in the early morning, a fleeting glimmer of broad greys and yellows of a considerable city. The whole land beyond lay low and beautifully rolling. Villages crouched dark and old, sometimes poor, never new. The land is rich, black, and empty -- great, broad stretches, which are the beginning of that vast plain, sweeping from the Alps to Manchuria, on which so fateful dramas of human history have been played. Here and there a church points up, lonely on the horizon. I haar Polish music on the earphone, which a coy newsmaid comes and smiling adjusts. It is sad and gray. There are more clustered villages, with little homes hugging each other for warmth. There are a few cities after Warsaw, such as Bialystok, Wolkowysk, and Stonim. There are pine forests and a far-off shadow of mountains. Here I pass a rich estate, with great brick barns and a white twoestory villa, hidden in trees. Beyond are broad fields, heaving with winter wheat, and bee-hives. I think I see here and there a roadside shrine. Haystacks are black and close-girded. Roofs are often thatched, cows are black and white, the land is not poor but

undeveloped. Domes of the East, white, bulging and curving, are appearing on the Churches. There are soldiers with guns -- not many, but always a few. At one station were drawn up a dozen or more ancient one-horse droschkes.

It has been ten years since I had seen Moscow. The changes in that time have not been striking, but subtle and significant. There is no brave show of square and smart shop, of residential suburb and other insignia of wealth and growth of private fortunes. There are a few changes that indicate less expenditure and display than in 1926: the golden domes, so characteristic of old Moscow, are disappearing. The vast Cathedral of Christ the Redeemer, which must have cost Czarist Russia 100 million loaves of bread, is gone and in its place only a vast hole and foundations. Foundations! That is the word that characterizes Russia of today. Foundations are not beautiful, nor even interesting, unless one has far-reaching imagination.

It is October, 1936, I am in Russia. I am here where the world's greatest experiment in organized life is making, whether it fails or not. Nothing since the discovery of America and the French Revolution is of equal importance. And yet, this experiment is being made in the midst of unexampled hostility; amid deep-seated bitterness and recrimination, such as men reserve usually for crime, degeneracy, blasphemy. I listened to the frenzy of hate and loathing when the Nazis at Nuernberg frothed and spit on Russia; I have just read the prayer of that old and dying priest whom millions call the successor of Jesus Christ, as he brackets War and Communism in one curse.

Yet can one doubt the sincerity of Russia? Can one question for a moment the gain to civilization if it were proven possible to make human welfare rather than profit the chief end of industry? Even if Russia fails to accomplish this, or accomplishes it only in part, what a stupendous adventure, what a search magnificent, and at a cost so far less than that of any similar revolution in world History, if perchance there ever was such an effort on such a scale.

What is the sober truth? This is no Utopia, no fairy land of joy and plenty. Moscow looks much like other cities. ~~Even its distinctive features like the golden dome are disappearing.~~ There are people in crowds -- well clothed and ill. There are various insignia of poverty and crowding. There are poor homes, crowded streetcars, tired workers. But with all that one conventionally expects in a modern city, there are some things astonishing. First of all, one misses the stores. Conceive a great modern city without street upon street of shops -- stores and again more stores; duplicate stores; stores for necessities, for luxuries, for frivolities, for food and clothing. There are stores in Moscow, but few, widely spaced and run by the state. Think first of the space and rent saved; think of the saving in advertising alone. On the other hand, the comparative paucity of stores must entail trouble and loss of time. One sees long queues at the shops waiting to be served. Yet here is an attempt at system in the most anarchic part of capitalistic enterprise -- the distribution of goods to the consumer.

41-9-39

The private shops of the N.E.P. have disappeared from opposite the Kremlin. The state directs retail trade. There are compact, well-stocked stores, here and there throughout the city; to all appearance efficiently manned and run, with goods aplenty. But not all goods: there are a few luxuries -- perfume, face powder, and other bits that my friend says were either unpurchaseable in 1926, or imported at high prices. These are "Made in Russia." Most goods for sale are necessities, made not because they bring the greatest profit to someone who has the power to say what shall be manufactured, but because the mass of the people need them and because the state alone has the power to say what goods shall be made. This is tryanny; this is interference with the liberty of action which some few folk have had for ages. But this liberty was bought at the price of poverty for most people who had no such liberty.

Differences and considerable differences in income are visible in Russia, more so my friends say today than in 1926. There are no idle rich; no

leisure class. One sees furs, silks, and good woolen cloth among some folk, and rags on others. It is hard, however, to say how far this difference goes and how symptomatic it is. One has a feeling that the back of extreme poverty is broken and that the mass of Russians have enough to eat and clothing enough to keep warm, and shelter of a sort. There are new buildings in Moscow -- mostly great office buildings for the officials of administ ation. They take the place -- with less duplication -- of the endless office buildings of New York and London. In them the socialistic state, guides and regulates production of goods, manufacture of goods, distribution of goods, application and training of human services. Here, then, is a civil service, which adds to what we are used to regard as the functions of government, all those matters which we thought must by order of nature be done by unregulated private initiative. In the Union of Socialist Soviet Republics an effort is making on a tremendous scale to prove that government must and can regulate the economic as well as the political functions of men and substitute public welfare for private profit. Is this possible?

41-9-68

Russia is a world. From San Francisco to New York one gains four hours of time. From Moscow to Vladisvostok one gains six hours! Wide, wild, and wonderful is Russia: monotonous for hundreds of miles with its broad, level empty acres, yet varying infinitely in succession of village and town, swamp and forest, noble rivers. At Perm, the Northern branch of the Volga flowed black and mighty, by the low-lying electric-lighted city. Then came the rolling hills of the Urals, and finally, the ice and snow of Siberia. We passed forests, swamp, and lake; we went over the Yenessei on a succession of new steel arches. The soil is of every variety. South of us in the Ukraine the black loam is a foot deep, but here, in mid-Russia, it is a yard deep, with an unplumbed fertility. What will the wheat fields of Iowa and Canada do when Russian agriculture really extends itself?

One sees little dun-colored crouching villages; usually with homes stretched

along one muddy street. It is the same sort of drab village life that exists in the West and South of the United States. Yet there is a difference. There are few stores, no saloons. Always there is a new school house, often of brick and usually the best building in town, next to the Center. The Center of the Communist Party is a common meeting place, a means of adult education and propaganda, a place where the radio brings news and entertainment.

We came to Irkutsk in the black mist of early morning. I struggled reluctantly up from the drug of dream and saw the sunrise on Lake Baikal. Baikal is a jewel hung in space at that fateful spot where Europe becomes Asia and where the waters part to make Pacific and Atlantic. Behind is Russia and Europe; before is Russia and China. Here meet the Past, the Present, and What Will Be. Our steam in the cold blast falls and lies low like lace across the waters. The sun casts aside her morning mantle of mist and shines white and clear. More and more recklessly we bore into the mountains, and the mountains ahead rise in ranks, black in front from iron, silver and snow behind. Slowly, persistently was the rush, hour after hour, mile after mile; the Lake reveals some warning of its vast size and grandeur; it is a sea, a rift in a continent, born of some ancient rift in Heaven. Six long hours we fly along its shores and yet, when we leave it and plunge toward Manchuria, we have only skirted the small curve of its lower border. It is four hundred miles long and twenty miles wide.

Consider the enormous tasks to which Russia had set herself. She proposed to make a nation where the masses rule. Many wise men earnestly and honestly believe the task is impossible; that for all forseeable time, the mass of men will serve some form of aristocracy, while civilization will always mean the culture of the few. Consider though the grandeur of the vision which makes this possible best , consist of all men. First of all, we must face the inevitable difficulties of all beginnings. One found in Russia in 1936, dirt and bad manners. Eating

and bathing habits were unpleasant. Equality of status, where there is as yet no real equality of culture and habit, has been endlessly inveighed against, from the French Revolution to the Emancipation of American Negroes. This, in 1936, greatly bothered observers of Russia. They were obsessed by the glamour of culture and wealth in a few, despite the degradation of the mass on which this culture was built. Wealthy East Indians, Rich Chinese, Russian Grand Dukes, bring to such people only the deepest admiration and envy. They mention them with hushed voices and accept their notice with reverence. What American, who rails at the rule of Russian peasants, would not have accepted a summons to the Winter Palace with tears of gratitude?

In 1923, the Union of Socialist Soviet Republics proclaimed, "to all the Governments and to all the Peoples of the Earth" that they had started the "enormous task of restoring the national economy on the basis of the new economic structure of society, after it has passed through unprecedented calamities."

Russia of the Czars was a colony ruled by the aristocracy of a superior race and inhabited by more than a hundred different nationalities. "We are," declared Lenin in 1921, "a beggarly, uncultured people We should speak of that semi-Asiatic cultural backwardness, which we have not yet thrown off... We are a people, to put it mildly, on the level, as it were, of semi-barbarism." The Russian peasants often lived in hovels filthier than pigsties, without meat, eggs, butter or milk. In 1921, industry had sunk to one-fifth of its prewar production, and agriculture to one-half; disease and starvation were making a fearful mortality. The land was "medieval" in its institutions, Asiatic in its strivings, and prehistoric in its conceptions of life.

It was this land, far behind Western Europe in cultural or economic standards that the Bolsheviks proposed to transform. They proposed a nation based on the suppression of the landlord and capitalist and of all forms of private profit-making. In a declaration of Rights, July, 1918, they

abolished private property in land; which was to be national property and given the peasants without rent; likewise, all forests, mines, and water rights and livestock were nationalized; workers were to control industry as a step to ward transferring all means of production and transport to the Soviet Republic.

Never before had a government tried entirely to recast its economic and social life, including habits, health, occupations and ideals; and to make a n ew civilization. Many said the proposal was impossible, even Russian Bolsheviks like Trotsky insisted that trying to build socialism in a single country with the opposition of a capitalistic world,and particularly in a backward land like Russia with little industry, was impracticable; that first a world revolution must prepare the way.

But Lenin and his followers insisted on trying their program, in Russia alone. They knew the risk but they took it, even after world attack. They agreed on their fundamental law in 1918, and then changed and amended this until it emerged as a constitution in 1922-1923.

In visiting Russia in 1936, my object was to see how the experiment,which I had seen briefly and broadly in 1926, had succeeded in practical effort. Then I had in a sense examined a dream; now in cold survey I wanted to see the facts of the situation. I had,naturally, neither time nor permission to make a personal study, even had I been equal to it in a land so large and complicated. But from 1926 to 1936 there had been numerous students of Russia whose published conclusions were now available; there had been a succession of Soviet studies and government reports, which seemed to me quite as reliable as government reports anywhere; requiring, to be sure, evaluation in the light of national susceptibilities, which in the case of the Soviet Union naturally weighed heavily. To this I wanted to add whatever personal observation and human contact could in a brief glimpse of Moscow and a ten-day journey from

41-9-58

Moscow to Manchuria.

The problem of Democracy in Russia, in 1917, was appalling. Here were over a 100,000,000 people in a land extending from the Arctic to the Black Sea and the Pacific to the Baltic; over two-thirds illiterate, belonging to many different races, cultures, and languages and religions. No constitution based on universal suffrage according to the theoretical Western model would have worked. Lenin and his followers evolved the plan of basing nation-wide democratic control on a large number of small meetings of neighbors, to discuss matters of intimate knowledge and interest. Here would be chosen persons whom they knew to represent them at district meetings and so on up to the All-Union Congress. Thus the masses would learn the technique of representative government, and yet be held together as a state. With education and leadership such a state would eventually become a democracy. The leadership consisted in control from above, administered by the Communist Party.

The 70,000 village and shop Soviets were allowed the utmost freedom of discussion. There was practically nothing they were not allowed and even encouraged to discuss and deal with, so far as it touched their interests; but neither village nor district nor province had any rights which the higher body could not curtail or veto; in other words, the Russian primary unit or intermediate governmental body was not given legal rights which belonged exclusively to them and with which "States' Rights", the higher authority could not interfere. Thus the Russian Federated Government avoided the tyranny of local rule but laid itself open to imposed authority. Here, however, authority could never act in ignorance, because the criticism on local and national matters was literally boundless and continuous.

As a writer in the Moscow News wrote: "Herein lies the essence of our democracy. Our Soviet democracy is not expressed in our official edicts. Our Soviet Democracy is expressed in broad activity, when every decision is worked out by the masses, criticized hundreds of times by the collective

41-9-59

farmers, by the individual peasants from every possible angle. Herein lies the difference and the intricacy of the work of leaders of village Soviets."

What does the mass of people think of this democracy? Testimony as to this lies in their voting. The Russians vote more widely and frequently than the people of any land. In 1934, 77,000,000 persons voted, or 85 per cent of those eligible. The voting age is eighteen, and there are no limits of sex, race, or religion, illiteracy or pauperism, so long as the person is engaged in "socially useful work of hand or brain." About 2.5 per cent are disfranchised. The voters take part in a million or more meetings during the year, where in town or factory meetings they elect delegates to local governing bodies, who in turn elect to district bodies, and they to provinial bodies; and thus up to the All-Union Congress of Soviets, a body of 3,000 delegates. There were in 1936 600,000 villages electing 2,000,000 delegates to 70,000 local governing bodies.

The Soviet citizen votes not only as a political citizen, but as an individual producer, as a social consumer, and (if he belongs to the Communist Party) as a member of the leadership group. For each of these functions there arises a governmental pyramid similar to that of the political soviets. The government in Moscow thus is the apex of a half dozen pyramidal social structures, covering the Union, each based on a vast number of small meetings for almost continuous discussion and for periodical direct election of primary representative councils.

The very multiformity of the Soviet administration gives a vitality. It pledges a common single aim and a richer common experience.

The single party slate of the Soviets is not necessarily a denial of democracy. When democracy first came to England, the constituency naturally was divided between Liberals and Conservatives. We had in most democracies two parties standing for differing fundamental policies, or, if not, two parties in agreement, differing only on methods. Sometimes this led to splinter parties

41-9-60

which represented particular groups and personalities. This goes to the ultimate in the Soviet Union. There is but one party and its aim at present was settled in 1928. Now the Soviets emphasize mainly means and personalities in elections, sifting and arguing in primary assemblies on what persons shall represent them in higher bodies and recalling them at any time. They insist that in main party matters there is and can be but one party, based on science and experience. This argument may be wrong, but it is not a deception. In future and within the framework of Communism there might conceivably arise broad differences of policy which would give rise to parties; but the absence of parties today is not necessarily a denial of democarcy, any more than the presence of parties ensures democracy.

How far is this voting and local activity a proof of real power, or how far is it but the semblance of power, while the reality rests above? Certainly the local bodies believe they have wide democratic control and are extraordinarily interested and busy. The village Soviet or town meeting rules the town and keeps order. There is, "practically nothing that the Soviet may not organize, regulate or provide at public expense, from roads and water supplies, through club houses and dance floors, up to schools, theatres, and hospitals." It also inspects the state manufacturing and trading departments in its borders and the consumers' cooperatives. It raises taxes and spends them on education and health, roads and bridges; but the budget must be approved by higher bodies to which they elect delegates. The villages keep practically all the taxes they collect, and, in addition, usually receive grants or remissions from the higher units of government to pay for and expand their budgets.

41-9-61

If anyone doubts this, the planning for democracy in this nation, the system of Soviet education would seem a sufficient answer. If a mass of people are to be misled and used by others for selfish and anti-social interests, they must not be educated save in limited ways. This explains why

black slaves in the United States were denied by law the right to learn to read and write; it explains the determined limitation of native education in all colonies. But in Soviet Russia from the beginning, the Revolution stressed education. From 1914 to 1921, education sank to its lowest depths. Then came an effort to educate a nation unparalleled in modern times. "There is no other fragment of earth's surface at all comparable in extent, in which anything like this conception of an educational service prevails." It is a universal compulsory education free of expense, not only for literacy but for life; with no restrictions of race, sex, color, or creed. School attendance increased from 14,000,000 in 1929 to 26,000,000 in 1933. Illiteracy was reduced to ten per cent in 1933. College enrolment increased from 207,000 to 491,000 and most of the students were workers' and peasants' children. As a result, reading habits increased and newspaper circulation rose from 12,500,000 in 1929 to 36,000,000 in 1933.

No matter how much of false propaganda and deception may have crept into the Soviet government, it has taken the one sure path eventually to base Russian life on intelligence and right. Everywhere in Russia in 1936, one saw the school house.

The center of this vast interlocking government, the All-Union Congress of Soviets, a body of 2,200 delegates in 1936 with 800 alternates, meets every three or four years. It is too large to transact business, but it expresses opinions and is representative of every part of the land. The effective powers of government lie in the hands of its Executive Committee and the Council which it appoints. This central government makes the budget for the nation. Because the state controls industry, its revenue comes from industries like railroads, mines, oil wells, and from manufacturing and trading establishments. These sources of income amount to several times the total monies received from taxation, by localities and the central government. Half of this income goes back to local governments as subventions to local authorities.

The expenditures fall into three main parts:

1. Capital investment
2. Social welfare, including health, insurance and education, espenses of government, justice and defense
3. The remainder is the wages fund for consumer expenditure.

From 1927 to 1934, the Soviet Union saved over twenty per cent of its income for new capital as compared to ten per cent in Great Britain. The Union also saved the expense of advertising which costs the United States at least a half billion dollars a year. Planning for all of this, did away with unemployment, preserved natural resources, and even encouraged voluntary labor by the laborers and not confined to the well-to-do.

41-9-40

The peculiarity of the Union of Soviet Republics as a government, lies in the fact that it includes both politics and industry in its control. The criticism leveled at this unusual undertaking is that it supplants the vital impulse of private profit and that no state can conduct industry successfully because of the nature of the task. The Soviet answer is first, that if the state can conduct industry then industry will be aimed at the objects for which the state exists; and if those objects are the well-being of the mass of inhabitants, the nation will be better off; secondly, the Soviets say that as a matter of fact, they are successfully conducting industry. On the basis of prices prevailing in 1926-1927, Russian production increased from sixteen to thirty-four billion rubles, for the period 1928 to 1932. It exceeded the prewar level more than threefold and the 1928 level more than twofold.

R Sidney and Beatrice Webb say:

"Viewed in comparison with other nations that suffered from the Great War, and measured either by capacity to produce, or by the aggregate of commodities and services distributed, there seems no doubt that the material progress of the USSR, from the exceptionally low level to which it had been reduced in 1921, has not only been enormous, but has even been proportionately greater

than that of any other country. In fact, the Soviet Union has quite obviously grown richer in the very years in which most, if not all, other countries have grown poorer."

But, asks the Western world, if this is true, what has been the Social cost? Germany under Hitler raised production but it was at the cost of eliminating the trade unions as effective instruments of industrial democracy. What has happened to Soviet unions?

The Soviet trade union is both a government agency and the voice of labor in industry. Its primary unit is the factory, mine, or industrial establishment where men work, and all who work in a single establishment producing the same commodity or service belong to that union, no matter in what capacity they labor. The members in each shop of factory elect councils; these councils elect delegates to district councils and they, ~~in turn~~, to republic councils up to the All-Union Congress of the 154 trade unions of the Soviet Union.

41-9-41

The Russian union is not, therefore, like the American union, a group designed to fight an employer or an industry for higher wages or pensions or better conditions. These things they want and fight for, but the path to achieving this is through the trade union hierarchy, which means that all industry is taken into account and not a single plant or one branch of industry. But into this account the interest of the worker is considered by his representatives elected by the voice of each little group of shop employees. They vote in union meetings and elect delegates to district meetings; the district organization elects provincial bodies and so on up to the All-Union Congress of Trade Unions, which is an organ of government, considered by Lenin as first in importance. No government policy is decided without consulting this body.

For all local disputes as to ages, hours and conditions of work, immediate hearing is given and arbitration instituted; the board, consisting of

three representatives -- one for the management, one the leading union official in the plant, and third, a member of the local Communist cell. Such arbitration is usually successful; if it is not, it can be appealed to a higher body with similar representation; or to the National Commissariat of Labor.

The 18,000,000 workers in the Soviet Union in 1936 were grouped in 154 unions, in tens of thousands of establishments. They elect 186,640 factory and local committees, who conduct more collective bargaining than any other labor union system in the world. The object of that bargaining is not confined to local conditions, but extends to the problem of increasing national production so that all wages can be increased and better conditions of work for all workers be realized. Wage rates depend on this general level of production and not simply on the conditions in one factory. They can study facts and figures concerning the level of industry over the nation, and consider the part which can be allocated to their industry and yet leave enough for others.

24-6-14

The Soviet trade union is interested in protection against industrial accidents; healthfulness and pleasantness of working places; plans for the factory conduct; correcting and punishing delinquincies of their members; food and prices for it in their cooperative; insurance for sickness, accidents and old age; housing; club houses for recreation; travel and holidays; tickets for theaters. For these matters the unions handle five billion rubles annually for insurance, pensions, rest homes, and hospitals. Naturally, this attitude of mind toward industry has been a slow growth. It took a decade for unions not to conceive of the union as primarily an organ of revolt against capitalist employers.

The inauguration of the first planning of industry brought conflicts as to the role of the unions; should each union be free to press for its own advantages in wages, hours, and so forth, or act as a unit to increase production for the whole nation and not for their industry along? The latter

attitude eventually prevailed. As a result, there is no effort to curtain output; there is general approval of pay based on piece workand there are no craft jurisdictional disputes. Every facility is afforded for upgrading of workers who apply, even to opportunity for study, with pay.

One notices about the Russian worker's not only preoccupation with his job and the local conditions, but also reliance on his future security in accident or old age; the certainty that his children' education will be provided for and that he will have vacations with pay. My conductor on the Trans-Siberian trip was planning on a vacation in that part of the Soviet Union which corresponds to our Florida; and rejoiced in the fact that his two children were in school and in line to learn a skill or profession which would furnish a livelihood and promotion.

41-9-43

The government of the Soviets make what we regard as private business a part of government. Practically all the heavy industry, and most of the light industries, together with nearly all transport and all foreign commerce, are conducted by public departments, which are established and directed by the federal government. To an American this seems utterly unworkable. But a moment's reflection proves that this vast oversight and planning must proceed in every great, modern industrial nation; in the United States and Britain it is done by private business organizations instead of by the government. Often such industrial trusts are larger than many actual governments in smaller lands and even rival in income and power many divisions of their own governments. Russia in this respect is like the combination of a hundred or more of our great industrial combines: like the Steel Trust or General Electric or the Metropolitan Life Insurance Company into a super organization or state. The difference lies in the fact that the object of the Soviet industries is general welfare, while that of the private firms is, at least in theory, no more than private profit. Even this calls for careful planning of industry, trained technical management and efficient and loyal workers.

The first criticism of this governmental excursion into industry which occurs to an American, is that it lacks that incentive to effort which the profit motive provides. In Western countries the greater part of the production and distribution of commodities and services is conducted by private persons, with the object of making profit for themselves; and not aiming directly at service to the community. Indeed, if profitable and a disservice, it may be still allowed to continue.

Nevertheless, incentives to work have bothered all employers of labor. Higher wage, shorter hours, and better conditions of labor are the usual incentives in Western lands. But in the Soviet Union the workers had to be asked to adjust their demand for wages to the level of production, which meant sacrifice for the poor who had never had much. To induce competition and extra effort among workers was a difficult task in a world where most laborers tried to reduce output, discouraged piece-work pay, and malingered on the job as a matter of policy. The Soviets try to combat this by encouraging competition in work; emulation, voluntary effort, like that which helped build in Moscow the most beautiful subway in the world. A series of public awards and orders have been instituted for manual labor as well as scientific research or art creation; and suggestions have been encouraged and rewarded in every line of work. In 1930, over a half-million rationalization suggestions from workers were received the state, which resulted in savings of 20,000,000 rubles. Stalin said in 1933:

"The most remarkable feature of competition is the radical revolution it has wrought in men's views of labor, because it transforms labor from a disgraceful and painful burden, as it was reckoned before, into a matter of honor, a matter of glory, a matter of valor and heroism. There is not and cannot be anything similar to it in capitalist countries. There, under the capitalists, the most desirable end which earns social approval is to have an income from investments, to live on interest and to be freed from toil,

which is regarded as a contemptible occupation."

This program calls for planning of human action and control of the material world on a scale never before attempted and to an extent which modern civilization has hitherto regarded as impracticable. To the astonishment of the Western World, the first Five Year Plan, even enlarged in scope, was substantially fulfilled in four and a quarter years. A second Five Year Plan, for 1933-1937, was immediately put into operation. The significance of this was increased by the financial collapse of the western European world in 1929, which made the projected invasion of Russia impossible. This confirmed the Russians in their firm belief that Western capitalism was on the edge of complete collapse because of inherent contradictions and paradoxes.

J1-9-45

The Soviets argue that this planning is the only alternative to the anarchy of individual free initiative with its recurrent booms and slumps and with its perpetual mass of unemployed. They say that demand for goods and services is fairly stable and can be calculated. That production to meet this demand can be arranged without letting speculation over-produce in particular lines for possible individual profit, or make artificial scarcities for higher prices. Thus financial storms and panics can be avoided. Only long experience over a span of years can prove this. But the experience of the Soviet Republics up to 1936, cannot be ignored.

The Western world answers that planning involves the slavery of the working class. But does it involve more slavery than other methods of doing the world's work? If a man lives, he must work himself or live off the work of others; labor on the part of somebody is compulsory. The choice of labor is wide in Russia, by educational opportunity, by promotion according to ability, by desert. But for the total amount of labor and its efficiency and distribution there is compulsion. But such compulsion exists everywhere and always has. It is greater in Russia than elsewhere, if we remember that the Soviets allow no idle rich.

It is, however, clear that for such a planned state there must be leadership. The conventional industrial state of the western world, depended on the self-appointed leadership of Captains of Industry with profit as the chief motive. This had to be supplemented by philanthropy and the ideals of human progress as expressed by popular leaders in literature and art; in religion and in social progress. The occurrence and efficiency of such social leadership was left mostly to chance. There was little effort to substitute Science for chance in human social progress.

41-9-46

This was because such scientific leadership in human conduct was regarded as impossible. In Soviet Russia, the Communist Party in 1936 appeared not as a conventional political party, but as an organization designed to train leaders for the state. The function of its membership was extra-legal and thus certainly liable to abuse. But on the other hand, its objects were clear and its ideals high. It based action on the Communism of Karl Marx and Friedrich Engels, as modified by Lenin and Stalin and by decisions of the Party Congress after long discussion and broad experience.

The party requires in it membership, the same regularity and obedience to decision and discipline ~~the~~ which political parties usually ask. Like members of a religious order, the Communist must obey orders as to work and place of work; and he takes what is in reality a vow of poverty or at least low income. The chief fact is that an attempt is seriously made to keep membership on a high level of intelligence and character, and periodical dismissals from membership are made when the members fall below the standard. Of course, the members have certain privileges and this tempts many to join who are in fact below the ideals.

They attempt to base leadership first on Science; and secondly, on special training and actual experience. Their scientific foundation is Marxism, as modified by Lenin and Stalin and others, and their course of study and action is membership in the Communist Party, with its discipline, study and

(pp 120-121 MISSING)

1917, said: "Mohammedans of Russia, Tartars of the Volga and Crimea; Kirghiz and Sartes of Siberia and Turkestan; Turks and Tartars of Transcaucasia, your beliefs and customs, your national institutions and culture are hereafter free and inviolable. You have the right to them; know your rights, as well as those of all the peoples of Russia, are under the powerful protection of the Revolution, and of the organs of the Soviets for workers, soldiers, and peasants." This did not remain mere declamation. The pogrom against Jews, which long played in Russia the role of lynching in the United States, disappeared forthwith; and in 1936, over the whole area between the Arctic Ocean and the Black Sea and the Asian mountains, with vastly differing races and nationalities, men and women, irrespective of physical traits or color of skin, even including occasional African Negroes; may associate freely; travel in the same public vehicles and go to the same restaurants and hotels; sit next to each other in the same colleges and places of amusement; marry wherever there is mutual liking; engage in any craft or profession for which they are qualified; join the same societies; pay the same taxes and be elected to any office without exception. No other nation on earth can boast of such a situation.

Nor did the Soviets forget the oppressed peoples of the earth -- the colored races, the colonial peoples, the exploited nations. They declared in 1923:

"As the natural ally of oppressed peoples, the Union of Soviet Socialist Republics seeks to live in peace and friendly relations with all peoples and to establish economic cooperation with them. The Union of Soviet Socialist Republics places before itself the aim of furthering the interests of the laboring masses of the whole world. Over the enormous territory stretching from the Baltic to the Black and White Seas and to the Pacific Ocean, the Union is already realizing the fraternity of nations and the triumph of labor, but it is striving at the same time to bring about friendly cooperation between

the peoples of the whole world."

No modern nation has equalled the Soviets in the emancipation of women. They were not content with removing legal disabilities and enfranchising them, but gave women, also, economic and household freedom. "A victory for socialism," Lenin had said, "is impossible until a whole half of toiling mankind, the working women, enjoys equal rights with men; and until she no longer is kept a slave by her household and family."

Sex equality from the first was the object of all legislation. Women, married or single, could vote and hold office; could work at any task at the same wage as men, with the same chance of promotion; they shared all rights of property, and the same rights as men in divorce and care of children. By 1920, Lenin could say that no country in the world was so free from sex disabilities in law or custom as the Union of Soviet Socialist Republics.

84-6-14

In the matter of religion, Russia has come in for endless criticism. This is partly because of the status of the church in modern lands, and partly because of conditions peculiar to Russia. An organization which claims knowledge above science and the right to dictate the distinction between right and wrong conduct for individuals, must, of necessity, be reactionary and slow in every reform. Why in England was the Church opposed to universal suffrage and trade unions? Why in the United States did the main body of churchgoers fight the abolition of slavery, Negro suffrage, and Negro equality? Why did the National Association for the Advancement of Colored People have the greatest difficulty in inducing the churches to oppose lynching?

Because the Church stands and must stand for things as they are, for reaction, for dogma. The Church may conserve, after the battle for righteousness has been fought, but it never has fought and never can fight as a body for unpopular ideals. Thus every cause, be it right or wrong, must begin by an attack on established religion, or it will never begin. Even after the rise of modern science, and the rejection of religious dogma by educated men,

there remains a disposition to refrain from disturbing the faith of the ignorant masses of men, because this might encourage despair and revolt.

Most modern lands have, therefore, been content with a strange dichotomy between its professed creeds and the real beliefs of its leading minds. If, however, the masses of people could and would be raised to intelligent action, this dichotomy must disappear. With the rise of democracy and broader political action in the western world, there came what used to be called the battle between Faith and Science, which after the Industrial Revolution tended toward a synthesis of modified church dogma and religious double-talk on the part of scientists and educated folk in general. Church dogma was sustained by belief that after all the masses of folk could not in our time, at least, be raised so as not to need the opium of religion.

41-9-14

This, Russian Communism challenged for the first time in actual political life and not merely in the classroom. This meant inevitably a fight with dogmatic religion and with all forces and people interested in sustaining and prolonging the power of the Church. Whatever chance there was to postpone or evade this battle was made impossible by the very character of the Russian established Church. With an establishment like this church in almost total control of the minds, beliefs, hopes, hates and fears of the masses, Communist government, if it hoped even to begin its reforms, must start with a duel to the death.

The Russian Orthodox Church in the early twentieth century represented the worst tendencies of religion. The Czar as head of the Church had in 1916, as one of his chief advisors, a drunken, thieving, dissolute monk, who disgusted the world. The village priests were for the most part ignorant and superstitious. The wealthy monasteries thrived on "miracles." An English professor of moral philosophy, John MacMurray, said in 1934:

"Nearly all that religion has been, and has meant, in Russia ought to perish forever from the face of the earth and from the memory of men." If

then, the Soviet government was to survive it had to begin with a fight on the established church.

The Soviets early took a stand against supernaturalism and closed miracle-selling shrines. They encouraged the formation of Anti-Religious societies which had in 1929 a half million members. Energetic campaigns against religion was made part of the first Five Year Plan. The atheistic movement grew rapidly and had, in 1936, many million followers.

However, the Soviets did not ban churches entirely, nor did they attempt to abolish religion. They limited religious activity and stripped the Orthodox Church of its immense wealth. But neither Christians, Jews, Moslems, nor Buddhists were persecuted and there was no law against the private practice of any creed.

This was the Union of Soviet Socialist Republics as I saw it and read about it in 1936. I was convinced that it has earned its right to exist and carry on its work. I believed that the success which it had made already, despite mistakes and in the midst of unexampled difficulties, proved that many, if not most, of its beliefs and methods would influence the world and spread to its lands and peoples. Especially was I convinced that fear of Communism was groundless and attempts to suppress it doomed to failure. Indeed, it has been said that in the history of human government there "has been no such colossal and exciting an experiment" as centers here. So I continued my long journey from Moscow to Manchuria, in November, 1936.

We were nearing Mongolia, and already in the Province of the Buriats. The slim firs stood sturdily, with straight heads and shoulders sagging with snow. The lonely silence of a Siberian night was about us. We climbed down a pass in the Black Mountains, following a river half hidden in ice. Suddenly, the tempo of the scene changed. A large new factory blazed up in the night. Great piles of lumber lined the river bank. An electric road showed a beginning of modern road making. Tracks of rails stretched wide on either

side, until a modern railway yard was evident. Then we swept into Vereudinsk, now newly named, and the world was soldiers. They filled the depot, covered the platform, crowded a standing train and marched about in overcoats to their heels, buttoned closely; some with guns, some with bundles. All was now clear. This was a frontier point of concentration against the threat of Japan.

I

42-2A-71

It brought me back to this horrible waste of war in 1936. All Europe, all of Asia was in arms. As if Russia did not have a task big enough and well worth at least the respectful waiting of the world, without having to arm herself against mankind. The only hope of human unity today lies in the common cause, the common interests of the working classes in Europe, Africa, and in Asia. This is why in the custom house of Otpor, the last outpost of Russia, stood the motto in all languages. "Workers of the World Unite!" Yet in the face of world militarism and new nationalism, Russia, intent on her internal tasks, must put down Trotskyism with ruthless hand, lest the armed world smash in blood the hopeful beginnings of a state seeking to replace private profit with public welfare.

All this was true. Yet, as I looked out of the window at soldiers, arms, factories, all for war preparation, I felt the earth beneath my feet smoldering and quaking with the flames of coming war. I could not believe it. I would not. But I felt the hidden flame.

The problem of Orientals in the United States had interested me from my youth because they were colored people and, therefore, a part of the question of the color line. In high school and college I had followed the restrictions on the Chinese in California and the federal exclusion acts. The Sino-Japanese War perplexed me. Our remission of the Boxer indemnity pleased me, but as I contrasted this with the humiliation which Germany imposed on China, I was really uplifted by the Japanese defeat of Russia in 1904, and saw in this event the beginning of the overthrow of white supremacy.

Then came the consequent increase of Japanese migration to the United

States and the anti-Japanese movement in the West. The "Gentlemen's Agreement" of 1907 followed, and Theodore Roosevelt's fight for Japanese right to hold land and attend unsegregated schools. In 1913, California forbade Japanese landownership. Later, I realized in visiting the West, how Japanese hard work and competition in market gardening and their clannish organization for distributing their vegetables direct to customers, had aroused the economic rivalry of business interests and determined them to stop competition by law.

I began to look upon the Japanese as leaders of the world fight against white imperialism. Especially was I encouraged in this idea by her unsuccessful attempt to force a declaration of racial equality through the League of Nations in 1919; the effort of Europe to limit her navy in 1922 confirmed my thought, and I even interpreted her pressure on China as an indirect attack on European imperialism in Asia.

About 1930, I made the acquaintance of a young Japanese student, who may have had official connections with his government, although this I never knew. We did talk much about Japan and he urged me to visit his country. When I went to Russia and Germany in 1936, I arranged through him to come home by way of Japan. He gave me advice and letters of introduction, which proved of great value.

Thus after my visit to the Soviet Union in 1936, I returned home through Manchuria, with brief visits to China and Japan. For, next to Russia, Japan intrigued me as holding the destiny of the darker work int its hands. And who has not dreamed of China?

Ten thousand miles east of our East lies a land, lonely and dust-swept, pregnant with history in the dim past. Hence, came the Mongol hordes that swept from Asia to France and Italy, and changed the history of the modern world. Brown men they were and yellow, with broad faces and flat noses, and wild, straight, black hair. They are here about me today, November, 1936 -- perhaps 25,000,000 of them -- in Inner and Outer Mongolia, and in Manchuria.

42-69-24

Inner Mongolia is Chinese; Outer Mongolia is under Russian influence; Manchuris is Japanese. This makes a border filled with signs of war, watched eagerly by the rest of the world. We could see the thicker concentration of troops on the Russian side as we approached Japan. The Soviets have stretched their military power thin in the vast sweep of land between the Volga and Baikal, and concentrated it here in the East.

The approaching of this fatal border in the night was eerie. Between three and four o'clock in the morning of November 12, the porter knocked on my door and said, "Otpor, Chass." I piled out as the train crept on slowly in the darkness. We stopped at a dark little station, in the bitter morning cold, and all of our luggage was taken by porters. Here it was examined minutely by Russian customs officers. They were courteous but thorough, handling each piece of paper and inquiring ~~after~~ about money. Then again the porters took our bags and put them back on the same train. All of the Russian porters, waiters, and officials silently disappeared. We were like a ghost train moving quietly and slowly into another land.

41-9-63

We were in Manchuria. "Passports!" came the rather peremptory call in the dim light. Again we climbed down at six-thirty in the morning, still before breakfast. Again porters shouldered our bags, and we were before another set of inspectors. I was rather wearily waiting, watching the struggle of an English lady with a rather rough inspector, who mussed up her bags and fingered the negatives of some films, when suddenly I heard a voice beside me, "Is this Mr. DuBois?" I looked around a bit suspiciously and admitted the accusation. A dapper gold-faced young man in uniform stood beside me bowing. "I have," he said politely, "a first-class pass for you over the State Railways of Manchuria, and some letters of introduction. Will you please meet the station master?" I nearly passed out. Remember, this was before breakfast, on a bitter cold morning, and after two custom inspections and almost no sleep. The only courtesy I ever received from a railroad was the privilege

of buying, at top prices, something that nobody else wanted. And here I was 10,000 miles from home, being offered a free pass in a first-class carriage; and lest I have to rest in a common waiting room, I was ushered into the station-master's private parlor, where I reposed on plush. The English lady came near being sent back to Siberia for resenting the gruffness of the custom's inspector. "For heaven's sake don't leave me," she pleaded, turning to me.

I walked in Manchouli, after breakfast, waiting for the afternoon train. It was a straggling town on a dusty plain, with Russian and Chinese signs. A Chinese lady drove past in a Russian droschke, in brilliant kimono and black and high-piled hair. Another passed on the street, in a coat of many colors. A dark old Mongol, with his two wives, bargained for a ride. School children, looking like Christmas dolls, straggled by.

It was a new world. My color was nothing unusual. All the world was sallow, yellor, or brown, except the often blonde white Russian girls who waited table in the restaurants and on the dining car. The train swung out toward the East. I was in a Pullman car made in America. The porter was not of my own expert race, and I felt like giving him a few pointers. The roadbed was better than in Siberia. Always war hovered near us. They pulled down the curtains early. I wanted to look out, but fortunately I first read the posted notices: "Passengers between Hake and Agounor must not look out of the windows, on penalty of severe punishment." I did not look out.

We swept along a great, wide plain, and the cold wind poured straight down from the North pole. I t was a desolate barren land, and the seldom folk crept wearily along the lonely way. "What would one do," asked the Norwegian on his way to China, "if set out on that plain?" Someone suggested the radio. But could you get a station whose language you understood? Then the scene began to change and here was the Sungari river, flowing north to Amur and the Artic Ocean. It was filled with shipping, driven south by the

ice and about to tie up for the winter. Then came Harbin, the first city of Manchoukuo, a big and busy place, the only remaining center of Czarist Russia on earth.

The whole scene changed as if by magic. We rode out of the desert and desolation of the northern desert. We flew easily on a perfect roadbed, ballasted with rock, and in Japanese cars better than Pullmans. The service was perfect. We were leaving the old border and haunts of the bandits, the modern successors of Ghenghis Khan. We came to Hsinksing, capital of the new Manchurian state, set up by Japan in 1932. The Hotel Yamato was a joy. I had a room with a bath and did I bathe! There all of those little Japanese touches -- white runners over the stair carpets, spotless and clean; a clean blue kimono for each guest; slippers in each room; cool drinking water in thermos jugs; a cloth damp with hot water, passed to each guest in the grill, to wipe his hands and face before eating; and exact, quick and, oh, so courteous service.

The hotel had once been a Russian club, and sits amid ancient acacias. To the right, as one emerges in the stining wind, lies the characteristic Chinese city, huddled and crouching, with its strange signs and ancient insignia; its push of folk, its little mysterious shops, its air at once sordid and romantic. Then to the left of the hotel rises the beginnings of the new Japanese city, or the city of the new Manchoukuo, planned by the Japanese. It is cast with broad streets, beautiful and large public buildings, some finished, some yet building, some only projected. Clearly this colonial effort of a colored nation is something to watch.

I am in the ancient capital of the Manchu emperors. Here, in 1936, live 424,000 persons. Here started that Manchu dynasty which for 267 years ruled China. In 1625, the Tsing dynasty, conquering the celebrated Chines Mings, made this town their capital, until in 1644 they moved to Peking, and Mukden became Pei-tu, or Home capital. Here, in 1905, was fought that awful battle

between the Russians and the Japanese, when 160,000 human beings were killed and wounded, a nd Japan took her place among the Powers. It is a singular city; an ancient walled town, three hundred years old, with palaces, tombs, walls within walls; a new Japanese city, broad and square, busy and beautiful. This is surely the place to pause and ask what is this Manchurian venture of Japan, and what does it mean?

Today, November, 1936, I am standing where in 1905, Japan blockaded the Russian fleet in yonder shining harbor of the Yellow Sea; and creeping up the greath harsh peeks of these wild mountains, made Europe surrender to Asia. It was historic ground. Manchuria is the natural mainland of the isles of Japan. She wrested it from China in the war of 1895, but Europe made her surrender it. Then the Russians calmly walked in and took it. They extended the Siberian railroad through it and seizing the harbor of Port Arthur, fortified it, and built the city of Dalny. Along came Germany and seized the Peninsula of Shantung, just south, and fortified that. Already England had seized Hong Kong, while France was in Indo-China. Japan was surrounded with guns pointed at her heart. Then came the Russian- Japanese war and Japan secured the extreme point of the cape as a lease, but Russia was still behind her and Germany at her side.

41-9-24

After the first World War, the situation changed. Japan said to England, who held India, Hong Kong, half of Africa and all of the continent of Australia; to France, who had North Africa and Syria; to America, who held half of Mexico, Puerto Rico, the Philippines, and the Canal Zone, "I need Manchuria more than you need any of these territories. Manchuria today has no government, but is in the hands of roving bandits. Its land and materials are absolutely necessary to my development and expansion as a nation." Moreover, there was one thing more which Japan did not say aloud, but which was even more true: "Unless I take Manchuria now, when you cannot stop me, you will seize it at the very first moment you can." England, France, and America, gorged with the loot of the world, suddenly became highly moral on the subject of annexing

other people's land. No! they said, and Japan walked out of the League of Nations and kept Manchuria.

What is Japan doing for the people of Manchuria and how is she doing it? Is she building up a caste of superiors and inferiors? Is she reducing the mass of the people to slavery and poverty? Is she stealing the land and monopolizing the natural resources? Are the people of Manchuria happier or more miserable for the presence of this foreign power on their soil?

Doubtless there was much to complain of in Manchukuo in 1936, but given the colonial nexus, Japan seemed to me to be doing better work than Great Britain or France were doing. I sensed that Japan was a fourth partner among the dictators of world organization, in which Great Britain and Western Europe, Italy and Eastern Europe, and the Union of Soviet Socialist Republics were the other three. Japan was determined to be recognized as a world power and her ultimate aim was domination of Asia. I was curious to know just how far this dominatiou would follow the western model, or how far it would follow some form of socialism. For historic and other reasons, it would not follow Russia; but there was at least equal reason for refusing the lead of Great Britain or France or the United States.

41-9-25

On this matter I took occasion to talk a half hour with Yosuka Matsuoka, the man who led the Japanese delegates when they walked out of the League of Nations in 1935. He is a quiet man, slow and low of speech, who as president of the state railways of Manchuria, ranks as a viceroy and premier, with the destinies of 30,000,000 in his hands. And moreover, with the responsibility of proving to the world, that colonial enterprise by a colored nation, need not imply the caste, exploitation, and subjection which it has always implied in the case of white Europe. He took time to talk with me while automobiles with visitors and officials waited, not because I represented power, influence or publicity, but because I, too, was a colored man and interested in the development and independence of the colored peoples of the world.

We talked of industry, capitalism and communism. He said that in some ways Japan was the most communistic of modern states. In Japan there had never been that strong sense of individual ownership of property that characterizes so many people. There was, on the contrary, through the family and clan a strong sense of common ownership of all wealth, of willingness to give to others and sacrifice for the common good. I ventured boldly to add, "You Japanese, by your marvelous national discipline, were able without revolution to transform Japan from Feudalism to Industrialism. May it not be possible, again without revolution, and with that same discipline and sacrifice, for Japan to make that further inevitable change from private profit to public welfare?" Matsuoka expressed agreement with me and I think he was sincere. But Japan was under curious double control at the time, which later I was to realize.

42-29-75

ADM

Meantime, I hurried to China which was end and aim of all imperial planning, from America to Japan, and from the tenth century to the twentieth. In the morning I went down to the great harbor of Dairen. My friends handed me three colored streamers of farewell, and following the beautiful Japanese custom, I and a dozen others held one end while the friends ashore unwound the other ends, until a rainbow of colored strips of paper streamed from ship to shore and I bade Manchoukuo goodbye.

X

We sailed into the Yellow Sea on a perfect day. Rough brown mountains lined the left, with oil refineries and factories, boats and trains. Then, further out, the hills became barren, except where the Japanese with infinite patience are covering them with tiny pine trees, whose sturdy roots will in some fifty years break up the barren waste which Russia left and clothe the hills again in greed. Further and further the mountains retreated on our left. A precipitous isle came and went and we were on the open water, sailing to China. I went out to watch the death of day. The sun was a ball of beaten gold, with pink and purple cloud streamers floating east. Quickly

it became a flattened burning egg resting on the horizon. Then it fell into the green waters of the Yellow Sea, hissing with silent light, and sending glory cries to high heaven.

China is inconceivable. Here first, a man out of the empty West, realizes where the population of the world really centers. Never before has a land so affected me. For Africa I had more emotion -- a greater wave of understanding and recognition. But China to the wayfarer of a little week, and I suspect of a little year, is incomprehensible. I have, of course, a theory and explanation which brings some vague meaning to the mass of things I have seen and heard. But I understand now as never before how I have mistrusted human history and missed the whole meaning of a people. And this I know: any attempt to explain the world, without giving China a place of extraordinary prominence is futile. Perhaps the riddle of the universe will be settled in China; and if not, in no part of the world which ignores China.

Pekin, or Peiping as it was then, stands on that ~~great~~ wide north plain, sweeping up to Siberia and down to the Yangtze Kiang. It is bathed in cold sunshine. It lies in two great rectangles, with a square within. The square to the north, with vast, grey, massive walls, is the Tartar city. This was a thousand years old when Christ was born, and two thousand years old when Ghengis Khan made it his capitol. Here the Manchu emperors ruled China for three hundred years, building their power on the magnificence of the Sungs and Mings.

Within this Tartar city, surrounded by pink walls, twenty feet high and occupying two square miles, is the Imperial city; and within the Imperial city is the red-walled Forbidden city, which no foreigner entered until 1900. Outside and to the south of the Tartar city, lies the oblong Chinese city, with walls thirty feet high. With these walls and walls within walls, dwell a million and a half of people on twenty square miles of land, packed with monuments, buildings, towers, arches, tile, porcelain, jewels, inscriptions,

manuscripts, and customs, habits, songs and a strange language, that goes back and illustrate and explain the history of 500,000,000 people for five thousand years.

Nearly everyone has seen some echo or imitation of a Chinese city. There is one in New York; one in Chicago; and a real one in San Francisco. The casual observer might think these imitations, caricatures. But one sees Chien Men Street in Peiping, and one knows that this human organism is a typical Chinese invention, age-old, rooted in the soul of a people, and expressing as well as any one thing can express, their life and work and play. First of all, it is full of people; it reeks with humanity, it crowds, pushes, swarms. The first day I was in Peiping I must have walked ten miles on this street and its cross allies. It is a continuous succession of little shops, stores, artisans, workshops, restaurants, amusement centers, sidewalk markets, personal services. It is commercialism, ingrained, concentrated, complete. It caters to every want of the streaming humanity that eddies through it like an endless flood.

41-9-51

In some Negro sections of New Orleans or Charleston, there is a faint approach to this situation, but only faint, for this is infinitely older, with a tradition and autonomy which the newer Negro city lacks. Perhaps in the Africa of the Middle Ages there was something like it. Crowded as are the merchants and purveyors to human want, humanity, the buyers, the seekers, are more numerous. Someone has said, that if the population of Europe were swept away tomorrow, it could be repeopled from China, and yet leave behind a population as dense as that of the United States. It is in the sheer weight of numbers that China must be hearkened to, if for nothing else. Babies, babies, everywhere, and women nowhere, save as mothers, housekeepers and followers of the world's oldest profession.

I have seen the Temple of Heaven -- one of the world's most beautiful monuments; the Forbidden City, with its Peacock Throne, its palaces and store

of treasure, despite the loot which drunken Europe stole after the Boxer War, and carried away in the name of Christianity. There was the Temple of Confucius and the stone classic writings of old China; there was the Lhama Monastery of Buddha, and of the statues of the eighteen disciples, ~~two~~ six black and ~~two~~ six brown, who brought Buddhism to China.

At last, two things whose memory lingers: that Summer Palace, which the intrepid Empress Dowager set upon a hill in unearthly spendor. That stone faced woman, who laughed at fate and took $20,000,000 set aside for a navy and built a fairy land with lake, and marble bridge, and glory-roofed palaces, rising one above the other until they stood above the earth and just beneath the sky, looking down on imperial Pekin. She lost an empire, but gained immortality. Then and now, Europe prefers navies.

41-9-26

Amid this amorphous mass of men, with its age-old monuments of human power, beauty, and glory; with its helpless, undefended welter of misery and toil, there is an organization of life and impenetrable will to survive that neither imperial tyranny, nor industrial exploitation, nor famine, starvation, nor pestilence can kill -- it is Eternal Life, facing disaster and triumphing imperturbably.

There passed a glory from the earth when Imperial China fell. Built as it ~~were~~ was on skulls, it was bravely built and its remains are magnificent. In all essential respects they surpass the Stones of Europe. Where Europe counts its years in hundreds, Asia counts its thousands. There is absent that all too apparent European effort to dramatize and exaggerate and misrepresent the past; to emphasize war and personal glory; China shows a finer effort to let the Past stand silent, frank, and unadorned; to tell the truth simply about men and fully; and to record the triumphs of education, family life, and literature far more than murder.

All that Europe has done China did before, save in the rapid, breathless material capitalistic technique of the nineteenth century. With that transitory

flash of power and that alone, Europe raped and enslaved the world from 1600 to 1900. She used China exactly as she did Africa, South and Central America, and her own working classes. It is essential to grasp that this profit-making by monopoly of capital and purchase of labor as a commodity is the universal European technique applied to all peoples -- European workers, African transported slaves, American imported slaves and immigrant workers, and Asiatic coolies.

I write this standing on the Great Wall of China, with twenty-three centuries beneath my feet. The purple crags of Manchuria lie beyond the valley, while behind are the yellow and brown mountains of China. For seventy cents I have been carried upon the shoulders of four men and down again. And here I stand on what has been called the only work of man, visible from Mars. It is no mud fence or pile of cobbles. It surpasses that mighty bastion of Constantinople, which so many centuries saved Mediterranean civilization from German barbarism. This is a wall of carefully cut stone, fitted and laid with perfect matching and eternal mortar, from twenty to fifty feet high and 2,500 miles long; built by a million men, castellated with perfect brick, and standing mute and immutable for more than two thousand years. Such is China.

Shanghai is an epitome of the racial strife, the economic struggle, the human paradox of modern life. Here is the greatest city of the most populous nation on earth, with the larger part of it owned, governed and policed by foreign ~~white~~ nations. With Europe largely controlling its capital, commerce, mines, rivers and manufactures; with a vast welter of the hardest working-class in the world, paid less than an average of twenty-five cents a day; with a glittering modern life of skyscrapers, majestic hotels, theatres and night clubs. In this city of nations are 19,000 Japanese, 11,000 British, 10,000 Russians, 4,000 Americans, and 10,000 foreigners of other nationality living in the midst of 3,000,000 Chinese. The ~~city~~ city is divided openly by nations;

foreign troops parade its streets, foreign warships sit calmly in her gates; foreigners tell this city what it may and may not do. Even at that, matters are not as bad as they once were. In 1936, foreigners acknowledge that Chinese have some rights in China. Chinese who afford it may can even visit the city race track from which they were long excluded. It is not common now to kick a coolie or throw a rickshaw's fare on the ground. Yet, yesterday afternoon I saw a little English boy of perhaps four years, order three Chinese children out of his imperial way on the sidwalk of the Bund; and they meekly obeyed and stepped into the gutter. It looked quite like Mississippi. And, too, I met a "missionary" from Mississippi, teaching in the Baptist University of Shanghai!

The explanation is simple: Capital. Into a land, rich in fertility, natural resources and great water highways, white Europe has poured machinery, tools, and materials so as to put the hardest working people on earth to making goods and rendering services for Europe. The profit has been enormous. But not only Europe, but Asia has joined in exploitation -- Japanese and Chinese have invested in Chinese cheap labor and called it Progress. The result is baffling. Always there is this mass of labor. Labor that has never learned to revolt, to demand, and is only beginning to strike in a few mass industries -- ideal labor for profits.

41-9-64

The wage is low and only balanced by low cost of living. The rickshaw man drags you, running five miles or more in a half hour, for a cent-and-one-half to three cents. A gardener gets five dollar a month with room and board, which is rice and a bit else; a factory hand, I have been told, may get twelve cents a day; a miner's wage of twenty-five cents a day was cited as high, since he could live on less than ten cents.

I went by invitation to the American-supported University of Shanghai and I said to the President that I would like to talk to a group of Chinese and discuss frankly racial and social matters. He arranged a luncheon at the

Chinese Bankers' Club. There were present one of the editors of the China Press, the Secretary-General of the Bank of China, the General Manager of the China Publishing Company, the Director of the Chinese Schools for Shanghai, and the Executive Secretary of the China Institute of International Relations.

We talked nearly three hours. I plunged in recklessly. I told them of my slave ancestors, of my education and travels. Of the Negro problem. Then I turned on them and said, "How far do you think Europe can continue to dominate the world, or how far do you envisage a new world whose spiritual center is Asia and the colored races ? You have escaped from the domination of Europe politically since the World War — at least in part; but how do you propose to escape from the domination of European capital? How are your working classes progressing? Why is it that you hate Japan more than Europe when you have suffered more from England, France, and Germany than from Japan?"

There ensued a considerable silence, in which I joined. Then we talked, and it was a most illuminating conversation, which I may paraphrase as follows: Asia is still under the spell of Europe, although not as completely as a while back. It is not our ideal simply to ape Europe. We know little of India or Africa, or Africa in America. We see the danger of European capital and are slowly extricating ourselves, by seeking to establish control of capital by the political power of taxation and regulation. We have stabilized our currency -- no longer do English Hong Kong notes form our chief circulating medium. Our wages are too low but slowly rising; labor legislation is appearing; we have 16,000,000 children in school with short terms and inadequate equipment, but a beginning of the fight against our 90 per cent illiteracy.

The whole emancipation of China was primarily an emancipation from European capitalistic control. They knew it. They told me some of the plans and work toward freedom. I even went down and visited that new ghost capital between Shanghai and the sea, which was planned to cut Shanghai's supremacy in trade and transfer it to a Chinese city ruled by the Chinese. But it was a thing half-begun and half-done. A beautiful and empty library stood there;

a marble city hall. Streets were there and some houses; everything but people. And they explained that it took capital to do this. They did not have the capital.

And therein lay the secret. They proposed to out-capital capital. They were going to build a new Chinese industry which should emancipate them from European industry; and they felt themselves able to do this. But they bitterly resented the intrusion of Japan, coming in as though she were a western power destined to dominate Orientals; as though she, the culture child of China, was going to show China the way of life; that China which had lived a thousand years before Japan was born and would live long after Japan's end.

The intrusion of Japan was resented because of its very success and because of its all too apt imitation of western technique. The Chinese had not been invited to hold hands with their yellow brother and march side by side toward freedom. They were ordered rather to put their manpower at the mercy of Japanese exploitation and let Japan finish what England, France, and Germany had begun, but would never now complete. There was more they might have said -- much more. But it was difficult for this mixed group to phrase it, and they were not sure how much I knew or just where my sympathies would be.

But I knew something of the tragedy of China, Japan and Europe in the nineteenth century. Here were kindred peoples in eastern Asia, stretching from Sakhalin to the Indies and mingling their blood with the whites of Siberia and the blacks of the South Seas. On a fringe of northern islands Japan developed a variation of Chinese culture; on the continent the Chinese built a magnificent pattern of life. To these in the nineteenth century came Britain and America to trade. America forced its way into Japan and Britain opened China, to the Indian opium which the British were determined to sell from their Indian colony.

Trade ensued, slowly and methodically in Japan; roughly and drunkenly in China, until by the time of the American Civil War China was all but a

British colony, while Japan was silently preparing to meet the whites on their own ground. Rebellion and hatred of the whites ebbed and flowed in China, while industry grew in Japan, and by 1894 Japan challenged China and disclosed her weakness to Europe, insisting only on being counted in among the harpies who gathered about the corpse. It was a curious flanking movement toward power. As partial master of China, Japan appeared as partner of Europe in the further exploitation of Asia. The very boldness of this move showed a deference to the power and methods of Europe, which was flattering. It made no bid for an Asia independent of Europe. It only asked partnership with Europe in Asiatic domination. Britain rose promptly to the bait. But China was not dead; the Boxers arose in rebellion, the intrepid Empress Dowager played politics, and a dreamer and reformer, Sun Yat-Sen, began to loosen the Manchus on their throne. Japan conquered Czarist Russia but Communist Russia gave advice and training to Sun Yat-Sen, when the Manchus were overthrown.

Europe and the United States were set on the control of Asia, but Japan was a problem. Could a colored nation be allowed to equal the white in exploitation of Asia? After the Russo-Japanese war, Britain thought Yes. After the first World War, Australia and the United States persuaded her to change her mind. So Japan, egged on by her military masters, took the bit into her teeth and resolved to conquer Asia in the face of the World. She discounted China as too weak and submissive to be a partner and gained the bitter enmity of those Chinese who were destined to rebuild China.

It was at this point, that I landed in China and had a glimpse of Japan. I had seen the Chinese University in Moscow in 1926 and I knew how Sun Yat-Sen, son of a peasant, had received sympathy and cooperation from Russia alone when he appealed to the West for help to establish the Chinese Republic after the overthrow of the Manchus. He saw the Russian Revolution in 1917, the year his Kuomingtang party attempted to take charge of China. The divisions in

China were irreconcilable and he appealed to the Soviets; he received trained leaders and Borodin was sent as adviser and ambassador. At the first party congress, held in 1924, Communists were admitted. A military academy was founded and a certain young man of thirty-eight years of age named Chiang Kai-shek, educated in Japan, was on Borodin's advice made head of it. Cancer and continual internal bickering among his followers killed the great Sun Yat-Sen in March, 1925, and in September Chiang Kai-shek became commander of the Kuomingtang army and proceeded to organize the party. The next year he had deserted the Communists, murdered thousands of students and workers, and with the help of rich bankers set up rule in Shanghai, while Borodin and the Communists ruled in Hankow five hundred miles west. But Chiang proved the stronger. His armies moved north and seized Peiping and his government gained recognition from all Europe.

41-9-52

Chiang pretended to keep Sun Yat-Sen's principles of nationalism, democracy, and people's livelihood, but he married into the rich Soong family and ended in such dictatorship and reaction, that even while I was in China, in December, 1936, the northern Chinese, both warlord and Communist, resented his surrender to Japanese imperialism, kidnapped him, hiding on a rock in his nightshirt and without his false teeth; and held him until he promised to fight Japan.

Sun Yat-Sen's program was Communism; not the complete Russian line, but an extreme socialism which envisaged division of the land, control of industry, ownership of capital in heavy industry, and the welfare state. How interesting it would have been if Russia and China had been able to cooperate in 1936, as in 1926!

On the contrary, in 1936, an uncertain, distracted China, led by a greedy, crafty man of no ideals or integrity, was face to face with a great, new Asiatic imperialism, set to challenge the imperialism of Europe on its own grounds and with its own methods.

The most disconcerting thing about Asia in 1936 was the burning hatred of China and Japan. It was a vivid, real thing and a major threat to the peace of the world. I discounted it before I came to Asia -- ~~now~~ then I could scarcely exaggerate it. With China and Japan in understanding and in cooperation, the domination of Europe, the enslavement and insult and exploitation of the darker majority of mankind ~~is~~ would have been at an everlasting end. But with China and Japan in rivalry, war and hatred, Europe still continued in 1936 to rule the world for her own ends.

What is the basis of the trouble between China and Japan? China's submission to white aggression and Japanese resistance; Japanese determination to cooperate with Europe, even when that involved aggression in China; the disappearance of central control in China and the growth of perfect team work in Japan; finally, the open and veiled effort of Europe to increase in every way the break between these cousins. Thus Asia is the prize of the world; its materials, its millions of cheap, docile workers; its climate, rivers, and mountains -- all this means wealth, luxury and magnificence to those who own, control and exploit China.

42-2A-80

Across the narrow straights, is a people determined to wrest control of China from the white world. Japan proposes to accomplish this by using the white world's technique and organization which she has learned meticulously ever since Perry forced her gates and insulted her. Deftly and courteously she evaded western control. Thoroughly and continuously she studied western methods, until in 1936 the West feared Japanese industrial organiation more than any in the world.

I left the bustle and roar of Shanghai, December 1, 1936. We sailed the Sea of Japan and all night it rioted. Next noon, I was at Nagasaki -- busy, quiet, polite and disciplined; yes, disciplined, that is the word for Japan. Why do we always instinctively think of islands as flat and low? I suppose it is the influence of maps. Japan is mountain peak in every

guise, fashion and height. It gives a primary impression of soaring height and strength as I sail the Inland Sea, from Nagasaki to Kobe. There is quiet, efficiency and order, in the porters, in the hills, in the villages nestling low on the sides of mountains.

I have never been welcomed to a land, least of all my own, as I was welcomed to Japan. I was helped past the port officials, white Americans being politely but firmly elbowed aside, to their open-mouthed surprise. It was astonishing to be at last in a colored vountry, able and determined to run itself without white advice. And Japan considers itself colored and not white. I have already tested this in conversation and suggestion. I was passed deftly through customs. The young fellow, who examined my books and papers, seemed a bit suspicious at several volumes. He balked definitely at a translation of Karl Marx's Capital, and sent it to higher authority; but it came back uncensored. We climbed into a taxi and rode from Kobe to Osaka, the industrial capital of Japan. It was almost a continuous city from the great importing center to the chief manufacturing and exporting center of Japan. My hotel had been selected and the manager was there in front to welcome me with a host of bowing servants. Never before has any land indicated that it knew or cared whether I arrived or not; except, of course, Africa.

What is Japan? I am I admit prejudiced in its favor. But I am trying to judge it fairly. First of all, it is colored. The blonde-haired world of my summer and fall is gone. The hair of the Japanese is coal black, with once in a thousand a faint brown. The skins vary from white to sallow, and then to yellow and brown. Casually, if I woke up suddenly in Japan, I should imagine myself among New Orleans or Charleston mulattoes.

But the most extraordinary thing about the Japanese is not physical; it is spiritual. They are independent and self-reliant and self-sufficient colored folk in a white world. They have no fear of white folk or secret envy. Whatever white folk do or have done, the Japanese are sure they can do better. And they do. They are more prompt than New England. Even their ships start on the minute, and you can set your watch by their trains. They are cleaner

than the Dutch. And for politeness and courtesy in public and private, the French are not even in the running.

Their cities? Let me say a word of Osaka. It has 3,000,000 people and is the seventh city of the world. It has 10,600 factories producing $420,000,000 worth of goods a year; it receives 20,000,000 tons of goods a year and ships out 12,300,000 tons. It has 8,000 business firms and a harbor which accommodates 184,000 domestic vessels and 2,900 ocean-going steamers a year. It is a clean city, beautiful city, built low and broad, rather than high, with a fine subway, electric cars and buses, and an automobile traffic rivaling European cities. It has broad thoroughfares and narrow winding streets. I found no slums; tiny, crowded quarters there were, but always neat and quiet. The red-light district, with the geisha girls, was quietest most respectable looking of all. It is a busy hard-working city, but there are no such signs of poverty and grinding, bitter toil as I saw in Shanghai. The rickshaw has almost disappeared from the streets. Wages are undoubtedly low, but I saw little begging. A leading paper cites 90,000 on relief, mostly old people and children. The intelligence of the public is shown by the numerous bookshops and the fact that the leading paper, circulating in several other cities beside Osaka, has 5,000,000 readers.

41-6-14

The accomplishment of Japan has been to realize the meaning of European aggression on the darker peoples, to discover the secret of the white man's power, and then, without revolutionary violence, to change her whole civilization and attitude toward the world, so as to emerge in the twentieth century as the equal in education, technique, health, industry and art of any nation on earth. It was a collossal task. It called for sacrifice. It called for genius. It called for team work. All this involved cost. It cost freedom and meant severe discipline. It meant severe repression. It meant force. But it was accomplished, and Japan is proud.

But in her very pride and accomplishment lies danger. The Europe which

she copied was no perfect land. The technique of industry which Japan mastered; the capitalistic regime which she adopted so successfully, has, as all thinking men can see today, threatening, if not fatal tendencies. And now, with a herculean task just behind her, Japan is called again to lead world revolution, and lead it with the minimum of violence and upheaval. In the nineteenth century Japan saved the world from slavery to Europe. In the twentieth century she is called to save the world from the slavery to capital.

Japan ~~today~~ has one tremendous advantage. She owns and controls her own capital. She need beg neither Wall Street nor Lombard Street for capital. She has her own engineers and technicians. Above all, she has a labor force that can live in contentment and health on twenty-five cents a day. Consequently, she is beating the commercial world today, and underselling every nation in world markets. She is reaching out with her capital and technique and controlling industry in China, and some parts of the South Seas. World Commerce is beginning to depend on Japanese goods. Go into any Woolworth store and see. Japanese labor in Japan is displacing white labor in England, France, Germany, and America.

41-9-66

Japan today is thinking in terms of capitalistic advance and not primarily in terms of human culture. Her attitude toward China is the main case in point. In the nineteenth century, Japan had to protect China against herself, or otherwise Europe moving from the domination of the Chinese would have sunk little Japan into the sea. China patriots today may not forget that they owe their chance for independence ~~today~~ to the fight the Japanese made against European aggression. The great Wall made it impossible for Europe to dominate the East, and the World War was caused by unbridled capitalism.

Japan, after the war, determined to dominate China and other parts of Asia, so as to make a recurrence of European aggression impossible. This is the secret of her military policy. But Japan forgets the danger of capitalism. Unbridled production cannot continue indefinitely. Cheap labor is not

in the end cheap for the nation that seeks to build prosperity on it. If Japan, in 1936, avoiding temptation, had raised the standard of living among her laborers, she could still compete with the world and at the same time develop a mass of workers who would be the most intelligent and gifted the world has ever seen. Democracy would become possible in a great land based on a really intelligent people. Industry would exist, not for Production, but for the widest and most profitable Consumption, made possible by rational distribution of such goods as the people really need for their weal.

41-9-54

China resented the patronage and attempted leadership of Japan, just as blacks in the West Indies have often resented the leadership of mulattoes. What was this upstart Japan, but the child of ancient Chinese culture. The aggression of war in 1894-1895 came just as Sun Yat-Sen, a young man of twenty-eight, was organizing his first societies to overthrow the Manchus, and helped open the doors of China to western aggression, in which Japan joined; she was among those nations who put down the Boxers in 1900. During the first World War, Japan made demands on China which only a conqueror could expect to attain, and which were probably made in anticipation of the coming end of European domination of Asia. But the Nine Power Treaty of 1922 restored international accord on China and left China open to the Revolution under Sun Yat-Sen. Japan continued interference, since she feared loss of Chinese markets.

The Shanghai incident came in January, 1932, and was caused by an increasing agitation and boycott in South and Middle China, especially at Shanghai, damaging Japan's Chinese trade after the Manchurian crisis. There were mobs and murders. Troops of the various countries were called out ~~January 29~~, and hostilities between the Japanese and Chinese ensued. Japan seized Manchuria, and February 24, 1933, the Assembly of the League of Nations, by unanimous vote, condemned Japan for this action. Matsuoka announced with-

drawal from the League of Nations in 1935.

It was the fear of England that was pushing Japan. England dominated China and India, Australia and New Zealand. But for the grace of God and the vigilance of the Japanese, she would own Japan. At one time during and after the Russo-Japanese war, recognizing the power and ability of the Japanese, England made alliance with her as an equal. Then, with no reason, except the unstated one of color prejudice in America, South Africa, and Australia and even Britain, of unwillingness to link her fortunes with yellow people, the alliance lapsed in 1921. When after the World War, China was disintegrating, Japan knew that unless she seized Manchuria, Europe would -- just as England seized and holds Hong Kong; France, Annam; and Germany and Russia large and larger slices, before the war. When Japan seized that part of China which was nearest anarchy, England, America, and the white world howled. China braced herself and, protected by European weakness and Europe's fear of Japan, began a forward development. But she let her bitterness toward Japanese aggression become a leading motive in her quest for new unity and strength, forgetting all about the worse and longer aggressions of white Europe.

Japan found herself between the devil and the deep blue sea; rapprochement with China, based on blood kinship and cultural likeness, was estopped by war and boycott, that reached unbelievable depths of hatred. Europeans secretly and openly encouraged a split between colored people which played directly into their hands. English papers, in 1936, in Shanghai retailed with calm impartiality every scrap of news and gossip calculated to influence China against Japan. Then came rearmament in Europe, with Japan outside. There seemed nothing for her to do but seek alliance with Germany and Italy, despite the fact that Germany despises yellow races, and Italy's hands are red with the blood of black Africa.

Worst of all, this alliance of Japan with Fascism sets her down as the

enemy of Russia. It was, of course, logical for Japan to recoil from her first European antagonist, whose defeat placed her in the family of nations. Moreover, certain points of the Russian Revolution touch Japan on the raw -- the attack on clan rule and religious dogma. But the Japanese family group was widely different from what Russia rightly attacked; and the Russian orthodox Church had no remote resemblance to Shinto cultural traditions and customs, or even to tolerant Buddhism as it exists in Japan.

These things disposed Japan to oppose the Soviets. But, of course, the underlying motive was the fear among the capitalists. Japanese industry is controlled by five great groups of capitalists. They are generous and patriotic men. They have been helped and often financed and furnished technique by the government, at the expense of the taxpayer. They would not and could not deny any demand of tht government in the line of taxation or cooperation. Also Then clan affiliation ties them to the lowest peasant. But they are capitalists and allied with international capital. They fear Russian Communism with its broad class strata and prefer their own vertical family division. Yet their supremacy in government influence is not as great as in many European lands. Above them stands Imperial authority and the power of the Japanese family, and the deep belief of the Japanese people in their destiny.

42-2A-83

There is poverty in Japan; there is oppression; there is no democratic freedom. But nowhere in the modern world is there higher literacy, as newspaper circulations of one, three, and even five millions prove. The Japanese laborer is not happy but he is not hopelessly discontented, and this is not stupor, but rather age-long memory of simple wants and joys, and firm faith in ultimate good.

Where, then, in spite of cruel misunderstanding and frustration, in spite of the rule of wealth and industry for private profit; in spite of the dominant military spirit, no worse but just as bad as in America, where else in the modern world is there a people so intelligent, so disciplined, so clean

and punctual, so instinctively conscious of human good and ill, as the Japanese? And where could the world of 1936 better look for leadership eventually toward industry based on well-being and not on private profit, and to a democracy which includes the masses of people and is conducted for their benefit? Japan was far from this in 1936. Few voted and voters were limited in power. Wealth ruledin Tokyo, as well as in New York and London, and Paris.

The resistance of China to this program was great and growing. What next? Next could come a change in object on the part of Japan, and a change would mean that Japan and China together as equals would try to industrialize the East and produce goods which the East itself needs, as well as goods needed by the rest of the world. And these goods which the masses of China and Japan need, would by the pressure of the communistic trends in China be distributed upon a new basis, not according to the ideals of the West which Japan is now following so strictly; but according to a new ideal much nearer that of Russia and strangely enough corresponding also in part with that integration of Japanese family industry, which makes the nation one industrial whole instead of the class-divided industrial system which one expects.

41-4-55

It must, of course, be Marxian in its abolition of industrial profit, toward which family and state communism in Asia already tends, but which has been frustrated by European influence. It must be Marxian in its division of income according to need; but it may be distinctly Asiatic in its use of the vertical clan division and family tie, instead of reaction toward a new bourgeoisie along horizontal class layers which must be the temptation of Europe.

It would take a new way of thinking on Asiatic lines to work this out; but there would be a chance that out of India, out of Buddhism and Shintoism, out of the age-old virtues of Japan and China itself, to provide for this different kind of Communism, a thing which so far all attempts at a socialistic state in Europe have failed to produce; that is a communism with its

Asiatic stress on character, on goodness, on spirit, through family loyalty and affection might ward off Thermidor; might stop the tendency of the Western socialistic state to freeze into bureaucracy.

41-9-52

It might through the philosophy of Gandhi and Tagore, of Japan and China, really create a vast democracy into which the ruling dictatorship of the proletariat would fuse and deliquesce; and thus instead of socialism ^ becoming a stark negation of the freedom of thought and a tyranny of action and propaganda of science and art, it would expand to a great democracy of the spirit.

There is hope here, vast hope. But the horror of it all is to see the fear of Soviet Russia and the blandishments of Germany and, perhaps, even of Italy, seducing Japan away from China and Asia and seeking to create a Fascist bloc which the finer world eventually must kill, or itself perish.

To me, the tragedy of this epoch was that Japan learned Western ways too soon and too well, and turned from Asia to Europe. She had a fine culture (an exquisite art) and an industrial technique unsurpassed in workmanship and adaptability. The Japanese clan was an effective social organ and her art expression was unsurpassed. She might have led Asia and the world into a new era. But her headstrong leaders chose to apply Western imperialism to her domination of the East, and Western profit-making replaced Eastern idealism. If she had succeeded, it might have happened that she would have spread her culture and achieved a co-prosperity sphere with freedom of soul. Perhaps.

In the dying days of 1936, while great Fujiyama still veiled its silver face, I went down to Yokohama and set foot upon the sea. I sailed east into the sunset again to discover America, in my own thought and through the thinking and doing of other folk. Ten days I journeyed until I came, at Christmas, to an unbelievable land of raining sunshine and everlasting flowers, called Hawaii. New Years, 1937, I stood in California of fact and fable, with the city of St. Francis of poverty and the birds before me and lifted up mine eyes to the hills beyond the Golden Gate, which form the rock-bound spinal column of America. Lifted them and let drop two small years; two little years; suddenly I saw the whole world aflame.

CHAPTER V

THE REIGN OF ROOSEVELT

I am an American. My forefathers have been Americans for three hundred years, and most of them have served America honestly and unstintingly. All of us have lived our lives in this land, mostly in New England and New York, often in the West and South. We have not greatly prospered; none have been rich but few have been paupers; few have attained exceptional eminence.

Assembling the sixteen of my great grand-parents, so as to avoid recent race mixure, it would appear from what I can learn, that nine of them were black Africans; and seven European whites. Of these whites, two were French, two others of Latin American descent, one Dutch, and one may have been a New England Puritan, although I trust not. Of these white folk, I know little. Two were Huguenots, probably honest artisans fleeing from persecution and poverty; another was a stodgy farmer, of the new world Dutch; a third was possibly a commercial trader, of the others I know nothing.

The mulatto Du Boises' were eminently respectable folk; I remember my grave gray, unsmiling grandfather as one who rather overdid the respectability line and caused revolt in my handsome, gay and irresponsible father. My calm and even-tempered mother helped to balance the brood. She was of the black Burghardts, who were different--loud and lusty; drinkers of hard cider and whiskey, and never avoiding a good fight. All these forebears served, as farmers, laborers, servants and soldiers, their country and their Gods.

To describe my feelings toward the United States as Love would not be English. My love was always for folk of dark skin to whom I gave my complete loyalty. France formyears I have theoretically loved; not for her blamelessness, but because in a half century of visiting her soil, I have always met sympathy and courtesy without sueingfor it. Despite finer

48-3-84

souls, some of whom I have known, I have always disliked the English, for their intolerable assumptions of superiority to everybody, their snobbery and cold hypocrisy. I cannot forget their contribution to the slave trade and slavery of my folk.

With 19th century Germany, I felt a kinship second only to that which bound me to Negroes. In part this was the accident of being, in my critical young manhood, thrown in close ontact with the best of pre-war Germany and thus having revealed to me a white folk different to any I had ever before met.

On the other hand, America has always to my mind been associated with repression if not insult. Not that all or even most of my American contacts and experiences involved such treatment. I have had many close and dear white friends; once four little Congregational churches in Connecticut, for three years, furnished me a scholarship of one hundred dollars a year while I was in college. I have usually lived a normal Americanlife, without hunger, with adequate clothes and shelter and with unusual opportunities for education. Wtih this, however and inextricably and continuously intertwined with it, went inhibitions, pinpricks and open insults which grew and swelled in my soul to proportions far beyond their intrinsic worth: where could I eat? Where must I live? What could I do for self-support? Was I among the "public" invited? Was it worth while entering this competition? Was the Harvard Glee Club fair in judging my voice? Was the Pullman sleeper really sold out? In all these ways and a hundred more, all my life, I was trained to expect discrimination. Often, probably most tmes, there was no unfairness; but my fatherland conditioned me for a half century to expect this , and too often I met what I looked for, and despite reason and philosophy, I nurtured hate for a nation with this cast of mind.

49-2-85

3

CHAPTER V

Then beyond myself, I saw and knew what America did to less fortunate Negroes than myself. I searched for and read details of every lynching and died horribly with the victim. I vividly imagined what I did not see or even hear of. I was soon clothed with a spirital provincialism, and an inner withdrawal and antagonism, beyond reasonand experience.

Thus to me, my native land spelled not affection, but grim duty. This is my native land. I shall never live elsewhere. I could not if I would. I would not if I could. Probably nowhere else whould I have received more if as much, in inspiration and opportunity. Had I been born in Africa, in 1868, I would have grown up to be slave of European or of American investment. If I had been born in England, I would have had even less opportunity than in the United States. In France, I would have had more; but would have been cut off from the Negro people and never known them or their problems. That would have meant that the plight of the poor and ignorant and sick of the world, would hardly have touched me at all or certainly not as deeply and intimately as it had to penetrate the soul of an American Negro.

That is why I spurned the well-meant advice a great and liberal white Georgian gave me: "You're right in your fight and your demands," he said, "but you can never win equality in this land; your struggle is in vain. Why do you not go to France and live?" I answered in my breast: "All right then, I'll lose. I'd rather lose fighting here where I was born than win in Europe. And why? Because this nations belongs to me, even if I have never belonged to this nation. And no God-damned Southerner nor cowardly Northern Copperhead nor servile 'white folks' Nigger' was going to stop my fight for the absolute freedom and equality of Black Folk in America."

But I am not so narrow as to think of the United States solely from the interests of me and my people. I know what America has meant to the

98-2-84

world . Here for the first in modern days, Liberty and Equality blossomed to real flower; here Democracy received a trying-out like nothing Europe n or Asia ever saw. Here on vaster scale than elsewhere ever, myriads of men-aye and of women- of differing nationalities and capacity, have lived together in peace and happiness, and wroked widely as they chose, and thought as they would. America is triumph and accomplishment for more men than ever anywhere before.[1] It only happens that my fate has been, not to be regarded as a fellow human being by most Americans and not treated as such. I will not forget or understate what America has meant to white folk; and too I will not bear false witness as to me and mine, either by lauding my slavery or thanking Abraham Lincoln for emancipation. I have said and will always continue to say while I speak that the treatment of Negroes in this land, past and now, shames and besmirches the escutcheon of a great and mighty nation whose son despite this it is my privilege to be.

The experience has narrowed my vision and made me provincial. I have seen Irishmen crawling out of the filth of their bogs to step in my face and crow; hill-billies and crackers from Alabama and Arkansas could spit on me to the applause of thousands; German peasants newly free could insult me; and Italians and Slovaks and a thousand others, couldnot only depirve me of a living but depend on white American mobs and police to jail or even lynch me for protesting.

When in season and out I protest, it is pointed out with perfect truth that in America, I have received food and clothes, adequate shelter, education far beyond my fellows, black and white, and not little honor and appreciation. I still maintain that my treatment in America has been exceptional and not characteristic. That my fate was not due to my desert but to lucky chance more often than to philanthropy. Had I been born on a Mississippi

49-2-84

plantation instead of in a New England village; had not liberalism at Harvard in the last decade of the 19th century cracked its doors to a few students from beyond Back Bay; if Rutherford Hayes, perhaps with some qualms at his role in Reconstruction, had not given me a Slater Fund Fellowship against the advice of respectable America, I might now lie buried as deep as thousands of unknown black boys of quite equal gifts.

This land is at fault and grievously guilty for not doing for thousands of more worthy Negroes what she has inadvertently done for me; and for utterly discouraging black boys and girls less stubborn and lucky than I, to reach for stars instead of being content in the gutter. Only a few years ago a professor at Bowdoin protested against sending a brilliant black student to Harvard on fellowship, lest "he become bitter like Du Bois." And when Harvard gave him a doctorate and used his thesis as a classroom text, the head of his department said confidentially to a friend of mine: "We'd keep him here to teach if he wasn't a nigger!" Far more important than this, I contend that the United States in suppressing her millions of black folk has ruined the ideals of liberty, equality and democracy for the mass of her white citizens and for the world. No double standard of decency can bring the millenium.

H9-2-88

My reasoning may be strained; but whether the reader agrees or not, I am sure he can understand the impact which Russia had upon me in 1926. I was not naive enough to think I had visited Utopia. On the contrary I knew quite well that I had had but a brief glance at small part of a vast land and of a desperately complicated problem. I boasted to my intimates that I was at the time the one American who had been a month in Russia and had not written abook about it. If I may quote a sour-mouthed old virago, whom the New York Board of Education insists on keeping to teach "niggers" and Jews their places, I have gained most of my advantages in America by insisting

"on being where I was not wanted."

There have, to be sure, been times when pushing in, I have found courtesy and welcome, but not usually. Why then over long years and with bitten lips have I continued to push? Because I wanted the opportunities of Harvard; because I wanted to hear the Ring of the Nibelungs; because I was tired and hungry; otherwise, believe me, I would have been as absent always as I was sometimes.

I cannot avoid being surprised when a white American treats me with courtesy. This is unfair to many white folk, because usuallly they are reasonably polite. But because of memories of a long past and because at time, ~~s~~ somewhere, I can be sure of more or less direct insult,--it is this sort of thing that makes living in the United States no unalloyed joy for black folk.

I can thus at once look on the United States as an outsider and continuous visitor, unintegrated into its culture and yet knowing and sharing it. I can see as few others can, the way in which the presence of a depressed class of human beings has distorted and still distorts our social development. My emotional sympathy with this group will doubtless exaggerate its influence, and for this margin of error the reader must make allowance,. Nevertheless my total view is worth setting down.

Meantime my full and unstinting loyalty and service went to my fellows of Negro descent, not simply in the United States, but in the West Indies and in Africa, which I never saw until I was sixty. Thence by logic I gave my friendship to all colored folk, in Asia and in the South Seas, hoping that in some way the dark world would unite forces and thrust itself across the color bar. In earlier years I pictured this as conquest of the whites by revolt and war. After the First World War, I renounced force, convinced that by war alone no cause can win. Afterward I looked increasingly for mental and moral victories of black over white.

12-2-64

When the free land and resources of America were thrown open to Europe they became in part a gift to the landless poor of Europe and a gateway to freedom of speech, freedom of belief, and freedom from want and fear. But the presence of Indians and Negroes as low paid labor, depressed by slavery and caste, also made this continent a boon to producers of basic material in the world-wide demand, which were ~~were~~ exchanged into capital goods and became the foundation of a new capitalism out of which the swiftly growing technique developed an Industrial Revolution.

Thus both individual freedom and exploitation of labor developed side by side in America and were confused in world thought, as differing aspects of the same expanding culture. This was possible because Negroes came to be regarded as not human in the same sense as whites, and as thus presenting no challenge to humanity or religion. When modern capitalism, built on the slave trade and slavery, began to raise Europe to Wealth and Power, the white workers of both Europe and America, began also to feel the pinch of poverty in the midst of progress and struck back in an organized labor movement which gained them political power and elementary education; and in America developed into an attempt to limit the area of slave labor and especially to keep from the slave system the vast free land acreage of the West.

Economic power in the United States opposed this with an attempt to preserve slave labor and the cotton and sugar which it used, and extend its area not only in this country but also to the Southwest and the Caribbean area. This aroused an organized anti-slavery movement, helped by fugitive slaves; and by white laborers who sought to get rid of slave competition. Civil War ensued, which resulted in victory for the North, when the Southern slaves began to desert the plantation and even to enter the ranks of the Northern armies as soldiers.

49-2-90

8

There were in 1864, two hundred thousand armed black soldiers in the Union army used as shock troops and for garrison duty. Beside these there were at least 250,000 black laborers, scouts and servants. There was no reason that by 1866, these numbers might not be increased to a million. It was this clear fact, unmentioned by North or South, which brought surrender in 1865.

Dilemma thereupon faced the nation. It had not at first fought to free the slaves, but to prevent the spread of slave labor. It accepted slaves' help to win the war and emancipation as a war measure. Now it looked on 4,000,000 poor and ignorant freedmen. What was to be done? Both Philanthropy and decency demanded for these victims of 250 years of exploitation and degredation, a system of adequate employment with decent wages, civil rights, a minimum of land and tools, and education. An attempt was made toward this, first in education by the more democratic churches. Then a Freedmans' Bureau was proposed by Sumner and Stevens, in whose charge the freedmen and white refugees were to be placed and trained for full citizenship. This was a great start toward real democracy and incipient socialism in the United States, without color caste and with full economic opportunity. It was stopped and frustrated by Threat and Compromise: The threat of the beaten slave power to use their increased political power based on emancipation, to lower the tariff and repudiate the war debt. Swift retaliation on the part of that industry which had been built on the war tariff and by finance holding millions of gold bonds resulted in the enfranchisment of the freedmen. The white South was aghast; but still based hope on the certain failure of Negroes as voters. Negroes did not fail. They attempted a social dictatorship of labor black and white and succeeded in establishing free education, some division of the land and welfare legislation. Northerners helped them and poor white labor began to join the blacks.

49-2-91

If the South had regarded Negroes as human; if it had seen abolition as a benefit instead of as a threat; it would have consented to build a New South on equality, democracy and education. This effort / the whole nation should have helped generously, considering the losses and distress of war. But no substantial part of the South would consider this for a moment. The whole training of the South for centuries had been toward petty aristocracy and slave labor. The overwhelming majority wanted past conditions restored as nearly and completely as possible. They envied the rich North. They hated "Niggers."

The industrial leaders of the North were equally indifferent or even immune to democracy. They had come out of the war with wealth, monopoly and privilege. Protected by tariff legislation, federal subsidy for ships and railroads, new machinery and the latest technique, the North stood tip-toe on the vastest expansion of industry the world had ever known. The White South, both former masters and ambitious poor whites, were asked to promise not to touch the tariff, not to scale the national debt, and to give the nation control of industry, without state interference. In return for this, the South was tacitly assured that they could lynch, mob and kill Negroes and treat black labor as slave in almost everything but name. This bargain was consummated in 1876, after a hectic decade of struggle, when the temporarily enfranchised Negroes put up a tragic and hopeless struggle to enter modern democracy as free men, despite their handicap of ignorance and poverty. Their effort did not wholly fail. It succeeded in many ways. This success doomed it.

White American labor, war-weary and confused, accepted this compromise, convinced that Negroes were not their equals and failing to realize how this exploited minority would help to keep down their wage. To the disfranchised Negro was added, 1861-1900, 14 million white immigrants who flooded the labor

44-2-92

market, lowered wage and living standards and precipitated a new civil war of labor and capital. In 1877, the white world looked on complacently, drugged by the upsurge of capitalism the world over, now developing into colonial imperialism, and rationalizing its Progress on the theory of inferior races working for the comfort and luxury of white Europe. This was exactly what British and French aristocracy and plutocracy wanted before the Civil War, and were about to achieve when emancipation threatened to upset their plans. Now with new and triumphant industry in America all this was accomplished and the American Negroes were kept in slavery in all but name, so as to encourage no ambitions among the dark serfs of Africa and Asia.

By 1885, the United States had adopted its basic philosophy: Life was Business and Business was Life; Civilization was the product of Industry and Industry was seed and product of Human Culture. Without profitable Industry nothing worth while was possible and Science, Art and Religion were the gracious gifts of the Merchant and his Banker. The United States entered upon its fabulous modern career as the greatest industrial nation on earth. Business enterprise was free of practically all moral, conventional and religious restraints. Americans lied, stole, murdered, lynched and mobbed. Their untrammeled exploits became world legends. But wages rose, comforts multiplied and the national standard of living increased. The poor boy who rose from poverty to wealth beyond the dreams of averice by any sort of cheating and lying he could use; the errant boy who come to rule an empire of business assisted by violence and murder; the industry which extended over the nation and reached Europe and Asia by high-jacking and deception; the technique which performed miracles unheard of and undreamed of, for manufacturing millionaires; this was America. This was white supremacy.

Big Business consolidated its power in the last quarter of the 19th

49-2-93

century under reckless, able and unscrupulous leaders. ~~In opposition to them, arose the trade union movement.~~ By 1894, Industry became a fight of everybody for himself, with monopoly of the necessaries of life as the prizes. Millions of property were transferred from the possession of the many to that of the few, without the knowledge of the many, nor their consent; without compensation and by falsehood and in violation of law. "Every great fortune that rolled out of the 19th century was rooted in fraud." "In their absorbing passion for the accumulation of wealth, men were plundering the resources of the country like burglars looting a palace." The share of the national income received by the richest 1.6 o/o of the population rose nearly 100 o/o, From 10.8 o/o in 1896 to 19 o/o in 1909.

Meantime, in this same America, free individual enterprise was reaching its practical limits. Cutthroat competition, anarchy of method, aim and plan was throwing business into industrial chaos. Fortunes were mounting, millionaires multiplying, but the total economy was not safe. Here was a chance for the socialist theories of Europe to be applied and our own dreamers like Henry George and Bellamy began to point this out. But the United States turned to another direction. Through private planning and volunteer combinations, industrial effort began to be centralized and competition limited. This put curbs on individual initiative. The vaunted American freedom was disappearing and liberals complained. But Business answered that this was in the nature of modern industry and social laws. To which the logical reply was that the State, the legal expression of the Public Will, was the natural organ to take over such private industry as could not be conducted efficiently by spearate individuals.

49-2-44

To this answer, America would not listen. In 1894, there were already over 400 combinations to monopolize the necessaries of life. The census of 1900 showed that half of these combinations controlled one-third of the manufacturing resources of the nation; by 1908, there were 10,000 combinations with 31 billions of capital. In the 20th century while the farmers' income fell and wages stood still, incomes of $10,000 and up, rose in nine years 114%. The number of persons with incomes of $100,000 up increased from 6,633 in 1916 to 14,816 in 1929, ~~compared with those who received $5,000 million in 1929.~~ Huge corporations replaced individual enterprise and business increased to vast dimensions. But in such integration, there was not only no democratic control, but as one millionaire said, it was personal or oligarchic rule by divine right, in the hands of men "to whom God in his wisdom had entrusted this wealth."

49-2-95

But these corporations, to function properly and completely, had to have certain functions of government: police power, court injunctions, eminent domain in acquiring land and other property, control of money and credit and fixing of wages and profits. To attain such powers, the corporations went into politics: first to prevent democratic government from exercising these functions against monopoly business; next to control their exercise by the representatives of industry.

"The rise of the modern corporation has brought a concentration of economic power which can compete on equal terms with the modern state--economic power versus political power, each strong in its own field. The state seeks in some aspects to regulate the

corporation, while the corporation steadily becoming more powerful, makes every effort to avoid such regulation. Where its own interests are concerned, it even attempts to dominate the state. The future may see the economic organism, now typified by the corporation, not only on an equal plane with the state, but possible even superceding it as the dominant form of social organization." (Berle and Means, p 357)

It was not so much government taking over private enterprise, as private enterpirse taking over the functions of government. In Wilson's administration, automobile interests secured $240,000,000 of public funds to promote road-building. Soon the United States had the most elaborate system of roads in the world, ostensibly for the farmers, but really for an infant industry set on its feet at public expense. The airplane industry was financed by govenmment funds. The pioneer inventors like the Wrights got next to nothing, while financiers reaped fortunes. The same was true of shipping, railroads, radio and other industries. "Pioneering don't pay," said Andrew Carnegie.

In many industries which individuals cannot develop, corporations are brought in and become more powerful than the state. There are in the United States thirty corporations with assets of more than $1,000,000,000 each. Thus, United States Steel, United States Rubber and General Motors take over the name and many of the functions of government and yet make profit as private individuals. Thus, often the private corporation or even individuals can perform functions of a public nature which the state is unable to perform; as when a single millionaire provides a site for the United Nations; or when a corporation televises their proceedings. These may be public spirited acts, but they are public functions and it is a question if wealth should be allowedto accumulate under private control so as to perform

49-2-96

work which the government under democratic control should be able to do.

A society in which production is governed by general economic forces is being replaced by one in which production is carried on under the control of a handful of individuals. "The economic power in the hands of the few persons who control a giant corporation is a tremendous force which can harm or benefit a multitude of individuals, affect whole districts, shift the currents of trade, bring ruin to one community and prosperity to another. The organizations which they control have passed far beyond the realm of private enterprise--they have become more nearly social institutions."

Private wealth by bribing public officials got incalculable values for almost nothing, as at Tea-Pot Dome and in this and analogous cases, control of industry began to be effected not by persons investing their own resources, but by the power which banks as custodian exercise over these resources. As Justice Brandais said, such control of other peoples money made for recklessness, speculation and the reaping of enormous profits, which the real owners of capital did not share. Law makers were bribed and even elections of presidents controlled as in the Bryan-McKinley contest.

49-2-47

World War burst on this development. We tried at first to stand aside and use the war for profit. Then when we had to enter, we let business profit in the handling of army funds; in the purchase of lands and materials and in shipping; until the South especially became rich through international disaster.

Of the causes of the First World War, President Wilson said: "The real reason that the war that we have just finished took place,

was that Germany was afraid her commercial rivals were going to get the better of her; and the reason why some nations went into the war against Germany was that they thought Germany would get the commercial advantage of them. The seed of the jealousy, the seed of the deep-seated hatred, was ~~not~~ successful commercial and industrial rivalry."

Following the war, came a hectic spurt of business with a pause in 1920 and then a wild rush of speculation from 1922 to 1929. The American world went money-mad. A new economic era was opening with profits incalculable. Banks and corporations poured surplus cash into the money market and contributed heavily to the campaigns, which put Harding, Coolidge and Hoover in the White House. Then came the day of reckoning. Black panic engulfed the nation on October 29, 1929; 16 million shares in corporations changed hands in five hours, dragging down millions of paper profits. Millionaires became paupers, captains of industry committed suicide and the world stared at the worst depression in modern days.

49-2-98

At the helm of state was the easy-going Harding, the colorless Coolidge and at the crash, Herbert Hoover. Hoover for 20 years had been a promoter and investor for Britain in Asia, Africa and Australia. He had heavy investments in Russian oil and lumber before the Revolution. In some years he drew salaries aggregating $100,000 a year. As food commissioner during and after the war he helped the war against Russia. As Secretary of Commerce he acted so as to nullify the laws against trusts, by furnishing government data to help corporations set prices. This gained him the Presidency; with the help of prejudice against Catholics. As President, he drove the veterans out of Washington, signed the highest tariff law in history against

the advice of the economists, and when the crisis broke, refused the demands of Congress for aid to the unemployed.

Thus when capitalism collapsed throughout Europe, our business enterprise was largely under control of trusts, our international trade stopped by tariffs, the whole of our banking system near bankruptcy; the gold standard began to totter and ten million American workers were unemployed and facing starvation. Hoover remained firm and stubborn. This was but a temporary upset. Our economy was fundamentally sound. "Prosperity was just around the corner." Capital needed temporary help and capital, once on its feet, would take care of labor.

Then in 1933, Franklin Delano Roosevelt became President of the United States and remained in that position until his death in 1945; twelve pregnant years for the world, and years of revolution for America. Who was this man Roosevelt and what did he try to do? He was not like Hoover, a business man and industrial promoter; he was not like Coolidge, a conventional New England farmer. He was a politician but of higher type than Harding or Truman. He was a man of manners and training, with knowledge of polite society, literature and sports. He was a man of inherited wealth, who had never had to earn a living; he enjoyed an unearned income but could not conceive making money as a main object of life.

He said bluntly; in his first inaugural speech: "The only thing we have to fear is fear itself--nameless, unreasoning, unjustified terror which paralyzes needed efforts to convert retreat into advance... We face our common difficulties. They concern, thank God, only material things. Values have shrunk to fantastic levels; taxes have risen; our ability to pay has fallen; government of all kinds is

49-2-44

faced by serious curtailment of income; the means of exchange are frozen in the currents of trade; the withered leaves of industrial enterprise lie on every side; farmers find no markets for their produce, and the savings of many years in thousands of families are gone.

"More important, a host of unemployed citizens face the grim problem of existence, and an equally great number toil with little return. Only a foolish optimist can deny the dark realities of the moment.

"And yet our distress comes from no failure of substance. We are stricken by no plague of locusts. Compared with the perils which our forefathers conquered because they believed and were not afraid, we have still much to be thankful for. Nature still offers her bounty, and human efforts have multiplied it. Plenty is at our doorstep, but a generous use of it languished in the very sight of the supply.

"Primarily, this is because the rulers of the exchange of mankind's goods have failed through their own stubbornness and their own incompetence, have admitted their failure and have abdicated. Practices of the unscrupulous money changers stand indicted in the court of public opinion, rejected by the hearts of minds of men...

"Yes, the money changers have fled from their high seats in the temple of our civilization. We may now restore that temple to the ancient truths. The measure of the restoration lies in the extent to which we apply social values more noble than mere monetary profit."

There is here no doubt of Roosevelt's radical thought; Roosevelt was not a socialist, but he was tremendously impressed by socialism; he was stirred by the socialistic legislation of Britain, Germany and

44-2-166

France in the early 20th century. Especially did the idea of a planned economy, espoused by the Soviet Revolution of 1917, attract him as it attracted all inquiring minds of that day. He said once in the early days of Communism: "I recognized that many leaders in Russia were bringing education and better health and above all, better opportunity to millions who had been kept in ignorance and serfdom under the imperial regime. I disliked the regimentation under communism. I abhorred the indiscriminate killings of thousands of innocent victims. I heartily deprecated the banishment of religion." This fact is forgotten or ignored today. The Trotsky propaganda and the extirpation of Russian treason had repelled him and many others but the basic plan of economic reform sank deep in the minds of all liberals, even of many who today are swearing by high heaven that they never, never saw anything hopeful in the Soviet Union. The fact remains that Roosevelt recognized the Soviet Union in the first year of his administration, after Wilson, Harding, Coolidge and Hoover had waited 16 years to perform this simple act of justice.

It was the educational system of his day which failed Roosevelt in his deepest need. His experience in industrial organization was not wide; his knowledge of the social developments of his age was narrow. He and his fellows of that day, did not receive in school or college any broad foundation in social science. He needed the guidance of a Karl Marx, a Friedrich Engles, a ~~Nicolai~~ Lenin; who had plumbed the depth and breath of modern industrial development. But such men were not mentioned, much less studied in the American college of Roosevelt's day. At Harvard they were heresy; and elsewhere anathema. But they were attacked by silence and neglect, not yet by witch-hunting as today, although by 1936, more teachers had

49-2-101

been dismissed for unorthodox economics than ever before.

Roosevelt's Brain Trust was ridiculed, because an executive tried to appeal to science instead of industry for guidance; the appeal was not conspicuously successful, because science--more especially social science--was in its Ivory Tower stage and had little truck with politics and business. The Harvard Professor on whom he called for advice on finance was far too theoretical for current money problems; in general it was clear that American study of social problems was superficial and academic, and furnished slight hope or scientific help for Roosevelt.

Sociology in the United States had not yet taken itself seriously; with Harvard it long hesitated even to call itself a science; but modestly regarded itself as a collection of miscellaneous facts about human beings, arranged in statistical tables or mathematical formulae. A real science of human conduct was simply beyond the conception of most teachers of sociology. Human action was viewed therefore either as pure chance or the result of undiscovered or undiscoverable law.

There was one teacher in a small western college, Macey, who helped Roosevelt immeasurable by teaching a gangling youth, Harry Hopkins, to take social reform seriously. Hopkins had studied poverty and charity on New York's East Side. He had lived in social settlements, those 19th century efforts to see "how the other half lives" and do something about it. He and I both used to frequent Lillian Wald's settlement; but we did not speak; there was a wall between us, which confined me in act on and interest to the narrow and quasi-nationalistic field of black folk. He was reaching out to the world. He had already given Roosevelt hard work and loyalty of a rare order and eventually supplied the socialist twist to his policies.

49-2-108

So Franklin Rooosevelt started with the strong word of his cousin Teddy at John Brown's Ossawatomie in 1910-- strong but never implemented; "We grude no man a fortune in civil life if it is honorably obtained and well used. It is not enough that it should have been gained without doing damage to the country. We should permit it to be gained only so long as the gaining represents benefits to the community. This, I know, implies a policy of far more active government interference with social and economic conditions in this country than we have yet had, but I think we have got to face the fact that such an increase in governmental control is necessary..."

Roosevelt faced three fields of effort: Restoration of industry; relief distress and reform of the social organization. The Soviet Union would have advised, first Reform; then relief and finally restoration; with the thought that an overall plan of re-organized economic life would be pre-requisite to any permanent relief, or any re-organization of industry, which would avoid waste. But this would have been impossible in a land which was sure that despite temporary disaster, that ours was the last word in industrial organization. Moreover, Hoover had already made a start to re-habilitate the tottering banking structure. Roosevelt moved to reopen the banks and restore confidence, following with surrendering the gold standard, and curiously enough, government insurance of small depositors. Here was the opportunity and duty to assume national control of banking, which would have been following the clear trend of scientific thought. Government control of money, credit and distribution of capital was spreading in the world and after the war seemed, to most thinkers, even to those who were not socialistic, as imperative.

49-2-103

as the postal service.

Neither Roosevelt nor his advisers had any clear overall conception of the economic status of the world and its development and cure. They paid no attention to Karl Marx, St. Simon, Fourier, Robert Owen or Louis Blanc. They had assimilated the American obsession that normal life is mainly industry. When therefore Business failed, the one duty was to restore it, rehabilitate it. That the system of industry which the 19th century had raised to world rule, had itself collapsed not only on account of world war, but from subtler reasons which they did not grasp. Whether the former industrial set-up could be restored or how it could be improved or whether it must be replaced, these were certainly questions which all called for study and examination. There is no indication that in the United States or in the councils of the government, or in the world of science, any such attitude was contemplated. Without hesitation or inquiry it was assumed that the only problem before America was how Industry could most quickly be restored to its former stature and functions. And the reason for this unrealistic and unscientific state of mind was the extent to which the United States was ruled, directed and schooled by organized industry.

49-2-104

Indeed it was the firm belief of America that human action was so unpredictable that planning for the future on any national scale was futile, and every action must be guided by individual and local trial and error. Yet most men knew that this attitude was unrealistic and forced on the country by selfish business interests. This land should and could know accurately the income of all citizens and its source and kind; it could know what taxes each person pays for the support of government; it could know price levels and changes;

costs of processing; property and ownership and rents; ownerships of corporations with income and expense, salaries and dividends. We could measure sickness and death, education and occupation far more accurately than our hit or miss census methods now accomplish. With this body of knowledge and a mass of other data concerning life and deeds of men, we could act and legislate with some accuracy and not by guess work, without infringing any privacy to which men have any essential right.

Relief came next. When Roosevelt came to power he faced thirteen million unemployed. Unemployment was too critical and explosive a matter to be handled entirely by Industry. Here naked socialism entered despite furious opposition. Under Harry Hopkins, 20,000,000 ~~million~~ independent, free Americans received millions of dollars in doles and were thus raised from poverty, despair and crime. It was an astonishing performance for America and to many seemed the end of the world. Why should a rich land, where everybody was free to initiate enterprise and accumulate wealth, resort to charity in order to survive? The plain answer was that millions of Americans were not free, could not earn a living, and faced starvation; that millions more of Americans dependent on the spendings of the presently unemployed faced analogous disaster. The country had no time even to enquire into the real causes of this situation before they must feed the hungry and make work for the idle.

Hopkins said: "I have never liked poverty. I have never believed that with our capitalistic system people have to be poor. . I think it is an outrage that we should permit hundreds and hundreds of people to be ill clad, to live in miserable homes, not to

49-2-105

have enough to eat; not to be able to send their children to school for the only reason that they are poor. I don't believe ever again in America are we going to permit the things to happen that have happened in the past to people. We are never going back again, in my opinion, to the days of putting the old people in the alms houses, when a decent dignified pension at home will keep them there. We are coming to the day when we are going to have decent houses for the poor, when there is genuine and real security for everybody. I have gone all over the moral hurdles that people are poor because they are bad. I don't believe it. A system of government on that basis is fallacious."

In October, 1933, Hopkins knew that with winter coming on the unemployment problem was bound to become more desperate and that the only solution was a huge work program. Thus by his advice the CWA succeeded state and local programs of relief, and was operated and 90% of its support came from federal funds. This aroused keen fears of socialism among many. It was one of the broadest programs ever instituted by the United States Government; and sought to provide individual work as near as possible to previous employment with pay prevailing wages with a minimum of thirty cents an hour.

The winter of 1933-4 was a terrible one with severe cold, and later floods and hurricanes. Suffering was wide spread and the initial appropriation of $400 millions was supplemented by $950 millions to sustain 20,000,000 in distress. In three and a half months the CWA built or improved 40,000 school houses; laid 12,000,000 feet of sewer pipe; built 469 airports and improved 529 others; built or improved 255,000 miles of road; employed 50,000 teachers to teach adults and open rural schools; built or improved 3,700 playgrounds

49-2-106

and athletic fields.

Among the 4,264,000 for whom work was found, were 3,000 writers and artists. It will take the nation long to realize what was done for American culture by this great gesture before it was sabotaged by organized industry. Indeed under present restrictions the truth may never be known. Borglum the sculptor wrote: "You have the only department that is free to help the creative impulses of the Nation, all other aids take in the character of hard business." This part of the program brought the most bitter criticism and was the first to be dropped.

With the passage of the omnibus work relief bill, there appeared three divisions of the relief program, a general clearing house, the PWA under Ickes, designed to help private enterprise by pump priming; and the WPA under Hopkins, designed to furnish work, regardless of its commercial value. This program eventually cost $10 billion dollars.

The enemies of the New Deal pounced on the WPA, as a matter of "handouts to Pan-Handlers," Only Roosevelt's popularity saved it; it rescued not only 20,000,000 needy, but the manufacturers, shop-keepers and landlords, dependent on them.

The attempt to rescue the farmers from bankruptcy followed in part the American industrial pattern, which was to raise prices by artificial scarcity. Thus in a hungry and naked world, we had the extraordinary spectacle of food being destroyed and the production of necessary materials curtailed. Yet for a hundred years it had been known that the earth could provide for the wants of men, if reasonably distributed. A national survey in 1934, when there were 12 million unemployed and nearly 20 million on relief, reported that there could

49-3-107

be plenty for all. But as Roosevelt gropedtoward that ideal, in that same year, the superintendent of schools of Gary, Indiana, that Steel Trust Town, made headlines and secured investigation by Congress when he declared that certiam members of the "Brain Trust" had confessed to him that they aimed at overthrowing our government and establishing Communism in this country!

The real underlying effort was to transfer some of the swollen income of industry to the persons who raised basic materials. Big Business was ever concerned to prevent abundance of goods from flooding the market. The New Deal sought to bring agriculture into this program, because the farmers during the war had so increased production that now farm prices were about to collapse. To do this directly by taxation on business was opposed by Industry; but since it must be done, it was accomplished by destruction of food and by bonus. But the bonuses instead of reaching the dirt farmer, quite often reached only the Junker land monopoly which was applying capitalist methods to farming and reducing the dirt farmer to tenancy. The attempt to go further and help the small farmer with his mortgages was sabotaged largely by the Supreme Court.

801-2-108

But that Roosevelt was far ahead in his thinking of the average intelligent American was clear from the revolutionary nature of his next steps: the Tennessee Valley Authority and the National Recovery Act, both of which involved reform of the basic American economy. The most startling measure of the New Deal, was the National Recovery Act, by which the government tried temporarily to assume direct control over the entire business of the country. It did not directly take over industries, but invited representatives to Washington to

26

work out "codes" of fair dealing to be followed. Industries which refused might be put under a "blanket code"; those which violated the code would have the Blue Eagle, symbol of cooperation, taken away. By the end of Roosevelt's first year nearly 400 codes had been drawn up, and 90 per cent of the industrialists of the country were supporting the NRA. The terms fixed minimum wages, prescribed hours of labor, abolished sweat-shop and child labor in various industries, and required business men to submit to the examination of their books by government inspectors.

This measure took imagination and courage. Organized industry, reeling under national panic, accepted the effort with a wry face. American labor had clung to its "laissez-faire" objection to government interference in its business; but now with one sweep the NRA, turned it into a semi-public trade unionism. One section of the NRA strengthened organized labor by forbidding employes to discharge men for belonging to a union "of their own choosing." This abolished the "open shop;" nor could the employees be forced to join the "company unions controlled by the employers." The terms of the act were resisted by some manufacturers, but most of them complied under the pressure of public opinion and the threats of General Johnson. Before this act had been thoroughly tried out the Supreme Court, long representatives of business interests, outlawed its main features. However in the Wagner Act of 1935, the right of labor to bargain, long recognized by all civilized lands, was at last conceded by this nation and it was admitted that coal mines might be run without machine guns and Pinkerton dectives. Court Injunctions were curbed in order to induce labor unions not to use their political power and form a real

49-2-109

labor party.

The Tennessee Valley Authority was a perfectly clear case of government intrusion in an area of economic endeavor where private enterprise could not enter save with powers of government. It had been championed in vain for years by George Norris. It at last was forced through Congress amid the bitter opposition of Industry. For Industry knew that this was the entering wedge for similar projects covering the river system of the whole country and destined to break the private monopoly of public wealth in agriculture, forestry and power control. Franklin Roosevelt deserves credit for this consumation of the life work and fine vision of Senator Norris.

The President said: "It is clear, that the Muscle Shoals development is but a small part of the potential public usefulness of the entire Tennessee River. Such use, if envisioned in its entirety, transcends mere power development: it enters the wide fields of flood control, soil erosion, afforestation, elimination from agricultural use of marginal lands, and distribution and diversification of industry. In short, this power development of war days leads logically to national planning for a complete river watershed involving many states and the future lives and welfare of millions. I t touches and give life to all forms of human concern."

Industry submitted to this at first because of panic and the tottering of all security. Then it began to fight back against the "Red in the White House." The Supreme Court, long representatives of business interests, threw out Roosevelt's attempt to regulate industry by codes, emasculated his attempt to refinance farm mortgages

49-2-110

and stopped the stabilizing of the bituminous coal industry. Of his nine main measures, the Court spoiled seven. Roosevelt attempted to curtail the reaction of these "nine old men", but failed until death and age helped him out.

From here Roosevelt went forward to curbing the "unjust concentration of wealth and economic power." by surtaxes on income. This was the most dangerous invasion on the inner control of the nation by monopoly which the President dared. It caused his election to a second term by overwhelming vote of 27 to 16 million votes and an almost unanimous electoral vote.

The people of the United States were behind Roosevelt. If he had had an overhead guiding plan toward which he was steering, he might have transformed the nation from a plutocracy to a social democracy. But he was hampered by the courts, that part of our political structure which the founders purposely left outside democratic control. The size and power of organized industry was so great that Roosevelt would have had a life task to curb it, even if he had really sensed its power. He did not, although his vision was growing and clearing. He began to conceive of taxation as a means of transferring wealth from the rich to the poor, and Townsend and Huey Long did not stand in his mind as mere demogogues.

The President said in his second inaugural address: "I see one third of a nation, ill-housed, ill-clad, ill-nourished." The Bureau of Labor Statistics and the National Resources Comittee showed, in depression years, that nearly one-third of all American incomes were under $750 a year and nearly half under $1,000. Since then the national income, in dollars, has increased, even though the dollar has

49-2-111

decreased in value and yet eight million American families and individuals in 1948 received cash incomes of less than $1000. THE NEW YORK TIMES, admits "relatively few of our population can save enough during the most useful working years to sustain them during the years when they are too old or too feeble to work."

The resistence of Big Business to the Roosevelt New Deal was unremitting. The chief Republican paper in April, 1934, declared that the administration's policies had been a succession of unrelated and hastily devised remedies and that "so far from producing a planned economy, the New Deal has produced an economic chaos, with no end in sight."

Aubrey Williams said: the fight was against" the Security and Exchange Commission which required them to tell the truth about what they were selling; the Wages and Hours Act which provided a living wage; and the Labor Standards Act which prevented them from throwing a man into jail for asking his fellow worker to join a union." ~~They don't like it,~~ To destroy these and other laws enacted in behalf of the people," they have undertaken to poison the people against the peoples government." They ~~have~~ marked for destruction:

The Wages and Hours Act
The Fair Labor Standards Act
The Securities Exchange Act
The Fair Employment Practices Committion
The Federal Communications Commission
The Unemployment feature of the Social Security Act
The Farm Security Administration
The Production Credit Administration
The National Housing Administration
The Bank for co-operatives
The Tennessee Valley Authority
The HOLC

Congress echoed the fight of industry because Congress was under control of industry rather than democracy.

49-2-112

But neither Roosevelt nor his followers realized just how this was happening. It was not only in the controlled voting of the East and Middle West, but in the utter suppression of democracy in the South. Here the withheld voting power of the Negroes was not eliminated, but was exercised by the white majority; and not by white laborers but by capitalists and employers. Here then could be sent to Congress and kept there to inherit the most powerful committee assignments, the most reactionary defenders of wealth and monoploly. This hard immovable core of opposition could not be met by democratic methods of reason and appeal.

The plight of the Negroes themslves aggravated the unemployment situation by furnishing a mass of labor which had to accept wage at any level offered. New techniques, new enterprises, mass production, impersonal ownership and control, had largely displaced the skilled Negro worker in tobacco manufacturing, in iron and steel, in lumbering and mining, and in transportation, and confined their common labor and domestic service to the lowest paid and worst conditioned varieties. In the new textile, chemical and other manufacturers, Negroes were nearly excluded. Just as slavery excluded the poor white from agriculture, so freedom excluded the poor Negro from rising and expanding manufacture. On the other hand, the world-wide fall of agruculture carried the mass of black farmers more and more down to the level of landless tenants and peons.

The world war and its wild aftermath, seemed for a moment to open a new door; two million black workers rushed North to work in iron and steel industries to make automobiles , pack meat, build houses and do the heavy toil in factories. They met the closed trade

49-2-113

union, which pressed them to the wall, into the low-wage gutter, and denied them homes and mobbed them; and then the Depression met all.

In the Depression , Negro workers, like white workers, lost their jobs; had mortgages foreclosed on their farms and homes and used up their small savings. But in the case of the Negro worker, everything was worse in larger or smaller degree; the loss was greater and more permanent; technological displacement began before the depression, was accelerated. The unemployment and fall in wage, struck black men sooner, lasted longer, and went to lower levels. In the rural South, their education almost ceased, while Southern city schools were crowded to suffocation.

Above all, in the Negro's case, local and Federal relief helped him last. It was easily explicable human nature that the unemployed white man and the starving white child, should be relieved first by local authorities who regarded them as fellowmen, and regarded the Negroes as sub-human. Moreover, it might happen, that while the white worker was given more than relief and helped to his feet, the black worker was pauperized by being just kept from starvation; and even when finally plans were making for national rehabilitation, and the re-building of the whole industrial system, such plans called for decision as to the Negro's future and his relations to industry and culture in this country, which the country was not prepared to make, and therefore often refused to consider.

The basic problem of the "New Deal" was whether to make its objective an effort to "restore" former "prosperity" or some more fundamental change in the essential economic structure of the nation to bring greater stability and economic justice. If it was the first, there was not much hope for the Negro. He simply could

49-2-114

look forward to being "restored" to a situation in whibh his prospects for economic development were growing less and less. If Southern agriculture was to be put on its feet again by government aid, the Negro would remain mainly the tenant farmer and exploited casual laborer. If the great industries were to be similiarly "restored" the Negro would still be the reservoir of unskilled labor with uncertain employment and low wage. And the restoration of banking and credit would mean comparatively little to a poverty-stricken horde of laborers.

On the other hand, if the relation of industry to labor in general was to be overhauled and readjusted, if the whole relation of the farming industry to the other industry of the land was to be carefully readjusted with regard to prices, methods, machines and markets; if unemployment was to be eradicated by shorter hours, mimimum wage, the forbidding of child labor and the arrangement of old-age security, if these and similar measures were going to change radically the basis of American life, then the American Negro, barring gross discrimination, was going to have a "New Deal", a new change to improve his condition.

The first blow to Negroes came when farm laborers and domestics were not included under the protection of the N.R.A. codes for industry. Thus three million Negro workers, more than half of the total number who must work for their livelihood, were not covered by the industrial codes. These three million were the backbone of the Negro consumer market. For them an immediate rise in prices meant additional insecurity and suffering. Furthermore, in certain areas where uniform mimimum wages were established for black and white

49-2-115

workers, employers replaced Negroes with whites rather than pay the same wages.

Thus the New Deal not nnly met opposition of concentrated wealth based on Negro disfranchisement, but also increased the opposition of white labor by increasing or failing greatly to decrease the number of poor and unemployed Negroes whose plight threatened the white standard of living. The result was violence and race riots.

Instead of decreasing in wealth and power during the crisis of 1929-33, America's richest families were strengthened, while masses of citizens were reduced to beggary. And even though many people were lifted from extreme low economic levels by some restoration of unemployment, the basic inequalities, issuing from no fundamental differences in skill or merit, remained as great as ever. Paralleling re-employment, which reduced the aggregate of joblessness from about twenty million in 1932, to about ten million in 1937, fantastic dividend and interest payments were automatically returned to the top income group of not more than six thousand adults.

The United States has not only nurtured the wealthiest class history has ever known, but it has also spawned an immense, possibly permanent, army of paupers--the unemployed. One expects to find millions of impoverished in backward economies such as India and China, Japan or formarly in Czarist Russia. In the advanced economic and cultural environment of North America, with all its natural resources, the phenomenon is tragically absurd. Fewer than twenty- per cent of the people possess nearly everything while nearly eighty per cent own practically nothing.

49-2-116

None can say how far Franklin Roosevelt would have gone in reorganizing the economy of the nation if the work of the first five years of his reign had continued and expanded. We might now have lived in a different world.

But war intervened, and once again as so often in the past, ruined the future of mankind. It was a senseless, inexplicable war, which none wanted, none foresaw. Its genesis was the First World War whedh ~~ruined~~ halted the colonial imperialism of Europe and laid its industrial organization in ruins. The one cure for this, on which Europe was practically unanimous, was the suppression of the Russian Revolution of 1917. From that time until the collapse of industry in 1930, Europe had waged war, directly, or through spies and propaganda against Russia. The dictatorships of Mussolini and Hitler were strengthened by the belief that Germany and Italy meant the fall of the Soviets.

When Germany and Italy ~~turned on~~ attacked Britain and France, the world was aghast. Franklin Roosevelt particularly was turned entirely from his task of the New Deal, to the salvation of the British Empire which to him and his class stood for all that civilization meant. He did not grasp the meaning of the Soviets or the part they played, He rather tended to ignore them as of minor significance, until later, far later in the conflict. It was this threat to Britain far more than any conception of the place of the United States in international industry and trade that seemed behind his desire to enter the Second World War. Nor was his grasp of the international plight of total industrial organization enlarged. Rather the world situation looked to him as primarily political.

49-2-117

All his education and social conditioning went toward his primary effort to save British culture. He forced the nation into virtual war, before war was declared, furnishing battle craft and "lend-lease" of material to bolster the tottering British Empire. Russia entered but casually into his thought, although he had, as one of his first officials acts as President, ended our silly refusal to recognize the Soviets. But Russia in 1939, seemed to Roosevelt negligible; he accepted the current American belief that the country was essaying an impossible economic experiment, doomed to inner collapse soon from starvation or revolution. Neither he nor the British made any real effort to make alliance with Russia.

When Sumner Wells was sent to sound out Europe on peace, Russia was not included. Roosevelt did not feel that such a visit would be of any use and regarded Russia as a certain victim of Hitler. Roosevelt did not at the time understand in the least the intricate problems that faced the Soviets or the situation which forced the war against Finland. Thus although both the British and Americans knew that Hitler was planning to attack Russia, no plans were mentioned to secure Russia's help, which was not regarded woth the effort. Churchhill forecast the march of Hitler through the Balkans, Russia and even "to the gates of India."

Lend-lease was debated two months and was admitted as necessary to save Britain, Greece and China. Open permission for the President to include other countries, especially Russia, brought shap oppositon. There was a hard fight and compromise was suggested, but the President was firm and got the power to extend lend-lease to the Soviets if Hitler or Japan attacked her.

49-2-118

Stalin in 1939, had no faith in the ability of Britain, France or the United States to stop Hitler. Russia had long regarded Germany as her eventual ally. She had, until the rise of Hitler, hoped that the German communists would gain control and swing Germany toward the East. But as Hiter and German industry gained control, Stalin knew that Hitler meant to conquer Russia if possible and destroy communism. He sought alliance then knowing that Hitler could not be trusted, but also knowing that evey moment of delay gained, would enable the Soviet Union better to prepare for the inevitable attack.

Every effort has been made to obscure this role of Russia from 1933 to 1939. Yet the facts are clear: when the Nazi revolution came Russia tried to insure world peace. She joined the League of Nations, made mutual aid treaties with France and Czechoslovakia, urged sanctions against Mussolini in his attack on Ethiopia; aided the Spanish republic, helped China against Japan and asked for an international conference against Hitler after his seizure of Austria. Had this Russian initiative been followed, World War II, would never have occured.

49-2-119

But France and Britain refused because such a policy would have protected Russia and they wanted Hitler to conquer Russia and remove this menace to world capitalism, which they had tried to elimiate since 1917. The United States also refused cooperation with Russia, although Roosevelt was dissatisfied by this attitude. He was held back by Congress, the State Deparmtnet and the Catholic Church.

Western Europe hoped that Hitler would leave it in peace while he attacked Russia. For this they were willing to give up the

League of Nations, yield Manchuria to Japan, let Germany re-arm and take Austria, and Czechoslovakia and the Rhineland; give Ethiopia to Italy and Spain to Franco. Our own Bullitt said: "It would be the wish of the democratic countries that armed conflict would break out in the East between the Greman Reich and Russia...Germany would be obliged to wage a long and weakening war." The Dodd Diary says that "Britain, the Nazis and Bullitt favored dividing the world, with Germany dominating all of Europe. Japan was to control Asia."

But in March 1939, Hitler made it clear that he proposed to attack the West before crushing Russia. Britain and France were dismayed but persisted in seeking to appease Hitler at the expense of Russia. Britan proposed a curious pact: that Russia should undertake "if Desired" to fight Germany in case Germany attacked Poland or Rumania; and this after Poland had refused to permit Russia's suldiers on her soil. There was no suggestion that England would fight Germany, if Germany attacked Russia, and naturally Russia refused such a commitment. A month later, Chamberlain, although refusing to visit Russia, proposed a Soviet alliance but with no commitment as to the future of the Baltic states, which had for 620 years had been the spearhead for Western conquest of Russia.

He finally sent a minor official to Russia by slow boat, with power to agree only to "consultation" in case Russia was attacked. Roosevelt could take no action, but a member of the United States staff in Russia gave Germany every encouragement. Finally in July, Chamberlain agreed to a "military mission to Moscow" composed of men of no standing and no power. Because of Britain's refusal to make a treaty of mutual assistance, the Soviets determined to make alliance with Germany, if they could obtain defence of

49-2-120

their own frontiers in Poland and the Baltic states. This pact enabled Russia to seize so much of Poland as would ensure her own defense against Germany; nor was any other procedure possible, since neither Poland nor England would consent to Russia's defense of Poland.

Already in May, France and Britain knew that a German-Soviet Treaty involving seizure of Poland, would follow failure to make a treaty between Russia and the West. They refused to do this, and instead in January, 1940, ~~Britain and France~~ they agreed to wage war themselves on Russia in Finland and in the Soviet oilfields in the Southwest. They had a hundred thousand troops to which Sweden refused passage in March. After the Soviets and Finland made peace, the French and British staffs continued to plan war against Russia in the Caucasus oil fields. Meanwhile, in November, 1940, Russia tried to sound out Hitler in accord with his proposal of a more extended alliance, but already Hitler without knowledge of many of his trusted advisers, had determined to fight Russia, in August. War began in June, 1941.

While war is waging, all thought of its cause is submerged in the all-out struggle to win. And when in addition, the expenditures of war solve problems of unemployment and profit, then danger mounts with victory and is at the same time disguised. This was the case of Roosevelt in the Second World War. His and the Nation's attention was diverted from fundamental domestic problems, to saving Great Britain, and to a personal deval called Hitler, who came to stand for all evil. But behind the phenomena of Hitler and Mussolini, lurked and festered basic problems, which were the counter-part of those which caused the crash of 1929 in America. The economic organization of

121 - 2 - 49

the world had cracked widely if not permanently. In that world organization America had played an essential role, not less important because it was industrial rather than political. To recover fm from collapse, effort on a world scale, with world-planning was essential. The United States attempted the impossible task of national and internal recovery, separate from world adjustment.

On this theory the socialism of the New Deal was based, and could at best have been but partially successful. But it was a forward step and was leading straight to international effort; first by tariff reduction, and then by economy planned for the world and not just for America. This tendency Fascism halted by attempting the restoration of world economy, not so much by fundamental change, as by simply by changing the beneficiaries of the system. Germany and Italy were to share equally in the profits of colonialism and world trade. To intensify and integrate this demand both these lands effected a new internal distriubution of wealth which was a national but not international socialism.

American recovery had no international aims and small national transfer of wealth. But there had appeared in Russia a new international socialism which both Fascism on the one side and the dictatatorship of organized wealth in the United States and Britain feared. After a world war to crush Russian Communism, failed because the organizations of world industry, which it was protecting, broke down, every effort was made to effect a modus vivendi between the German and British control of world trade. It would have been successful had not megalomania, approaching insanity, taken grip on Hitler. He began to conceive himself not as equal partner of the industrial

49-2-122

giants, Britain, France and the United States, but as conqueror of Russia and master of the world. He accomplished recognition and full partership in world industry so easily during the years of industrial disaster, that in 1939, he entered arrogantly on his vaster and more fantastic mission.

He determined to conquer France and Britain in turn, and then ignoring the United States, crush Russia and with Japan work his will in Asia. This wild dream could have been stopped in its tracks by a combination of Britain, Russia and the United States. But both Britain and France discounted Russia: first they thought her weak and on the verge of collapse, because of her planned economy; and second they feared that in case her socialism was successful, it might spread by example or force to the British Empire and America.

The war itself was a set of contradictions. Britain and France did not wish to fight Germany or Italy. They were ready to make every appeasement. They gave Ethiopia to Italy almost gladly. They were ready to yield Hitler everything in reason and more: he could take back the Rhineland; he could re-arm; he could have his colonies in Africa back, if he wished; he could re-partition Poland; he could have Austria and most of Czechoslovakia; he could take the Baltic states, and attack Russia; he could join Japan in dominance of Asia. All that imperial Britain and France asked, was a fair division of the spoils of empire, in a new arrangement of the world domination of Europe.

But if Hitler was going to dictate terms and dominate the world through Germany, then they would and must fight and call America to aid. The United States displayed no enthusiasm. ~~They~~ We had pulled England's chestnuts out of the fire before; ~~they~~ we did not like

49-2-23

France for various reasons, not the least of which, was her lack of color hate; ~~they~~ we sympathized with Germany. Then Industry and Finance had a word to say. Suppose the British Empire and the vast dominion of France fell, who would be heirs but America? It was the American Century by logic and no need fighting for it. Let socialism in Germany and the Soviet Union kill each other off, while we inherited the earth.

Against some such philosophy as this, more or less clearly conceived, Franklin Roosevelt fought from 1938 to 1941. He turned from the New Deal and on the strength of his third triumphant victory in 1940, forced the nation into war, by gift and agreement, land-lease, annexation and war-ships; he took Republicans into the cabinet, got millions appropriated for defense and with Churchill drafted the Atlantic Charter, on old and nearly forgotten terms of no new territorial annexation; self-government, free trade, free travel, better labor conditions and world government.

Yet the United States stubbornly stayed out of war, until with unbelievable effrontery, Japan attacked the United States. Japan was colored. The United States had brow-beat her, cajoled her, insulted her, admired her but refused her recognition as an equal, and induced Great Britain to do the same. But these little brown men had persisted, had built a mighty empire and demanded partnership with the white world. Her military might and her marvellous expanding industry was making her a feared rival of white imperialism in Yellow Asia. Finally this Japan made alliance with Germany, and while feigning negotiation destroyed our sea power in Hawaii. This made war not only possible but imperative, backed by American color prejudice.

49-2-124

 (p. 193 MISSING)

to Britain in return for military bases. Congress voted 18 billions of dollars for armmament and established the draft, In March, lend-lease was authorized by Congress. By June, Hitler had turned on Russia and Roosevelt saw that lend-lease must go to her . He and Churchill met in Mid-Atlantic in August, and framed the Atlantic Charter. Still the United States paused, until Pearl Harbor. Then all Americans wanted the United States to attack and conquer Japan quickly. But as to Europe, there was no unanimity. Most Americans wanted Russia to lose; many wanted Britain to lose and some wanted Roosevelt to lose. Of course the United States with Great Britain and the Soviet Union could win; but who wanted to unite with Russia? Meantime Big Businggs went to work; here was a chance to get even with

"The Red New Deal with a Soviet seal
endorsed by a Moscow hand;"

and three phases of attitudes toward the war ensued:

1. The "sitdown" strike of the corporations which refused to go into production of both the defense program of 1939 and the first war-time program of 1941-42.

2. Profiteering and robbery of the American people; manufacture and delivery of defective airplane motors, copper, wire, bullets and other war materials, resulting in endangering the lives of American soldiers.

3. The secret cartel deals by which the biggest American corporations supplied nations soon to be our enemies with materials and information, and kept America unprepared.

The rubber famine lasted for years because Standard Oil had suppressed the artificial rubber patents; the aluminum shortage arose because the Mellon Interests were in a cartel with the Nazis; the Steel Interests refused to expand. The Allied nations, notably Brit - ain and Russia, held the military lines at a loss of millions of men and homes and billions in treasure, while the United States spent

49-2-125

two years getting into production of the instruments for winning the war.

(managed by Barney Baruch)

Those owning copper mines made extravagent profits; a billion dollars were spent on airplanes before a single one was delivered; steel plate costing $315 a ton was sold to the Government for $400 to $600 a ton; the government spent over $100,000,000 for nitrates, but got none before the Armistice; $400,000,000 was spent on 1900 contracts for shells which never reached the firing line; shipping lines sold ships to the government for $2,000,000 each and bought them back for $300,000.

It was clear that the industrial leader, in business for profit, refused to take the risk of expanding their plants for a war of indefinite length; especially since business in consumers goods like automobiles, was booming. Moreover in war production, he faced strikes. His recourse was to demand enormous profit for all he did. This he got, while America gambled in death and Britain was at the point of collapse.

49-2-126

Both Britain and the United States rebuffed Russia's frantic efforts to make alliance with them and forced her either to ally herself with Hitler or fight the world. The Western world was aghast when Hitler offered Russia the alliance which they had refused. They knew the truce was phoney and so did Russia; but Russia immediately moved to strengthen her western frontier in Poland while Hitler crushed France and had Britain gasping for breath, when the United States rescued her with arms and materials. Balked here, Germany turned and attacked Russia. Here was the opportunity of the modern world; immediate and concerted efforts

could have contained Hitler and Mussolini and united Europe could have held Japan in Asia. But this would have made Russia a co-partner with the esrtwhile masters of the world. To this, Britain, the United States nor France were prepared to assent.

Hitler, with startling change, turned east to conquer Bolshevism and control Asia through Japan, before finishing the conquest of the West. The West awaited with relief and almost with complacency, the quick overthrow of Russia. This would at least give breathing space and a chance eventually to make terms with Hitler by restoring German colonies in Africa and elsewhere, with such other compromises as were necessary. And at any rate with the certainty that the threat of Communism in the world would be laid for a generation if not forever,.

The United States finally started her war effort, with appropriations rising to nearly eight billions a month by the middle of 1943, which showed not only our sacrifice but even more the profits of our industry. We had an army of four million by the Fall of 1942, and then we entered the war. We gave away 15 billions of dollars in lend-lease by September, 1943, but our armies and navy, late in 1942, went to Asia and Africam not to Europe. Back of this move was the desire to save the world of colonial peoples from Germany and Italy and part of it showed the hope that Germany and the Soviets would kill each other off, leaving Western Europe to recover slowly and divide the earth with the United States.

But the West was surprised and bewildered by the resistance which Russia exhibited to the fierce onslaught of the Germans. The British immediately suggested American lend-lease to the Soviets; it would not save them but it would give Britain longer breathing spell

49-2-124

and forward that mutual annihilation of two enemies which might save the world. Roosevelt agreed and sent Harry Hopkins to Russia. This was a master stroke. Hopkins found in Stalin a blunt, straight-forward man, fighting to win a war, with a nation back of him. A human nexus between two great countries was established and grew from then until Roosevelt's death and until Jimmy Burns tried to "get tough" with Russia and gain by threats of the atom bomb what Roosevelt got by compromise and friendship.

The Russian resistance grew and hardened. The German attack became an all-out struggle of vast proportions. MacArthur wrote in 1942: "The world situation at the present time indicates that the hopes of civilization rest on the worthy banners of the courageous Russian Army. During my lifetime I have participated in a number of wars and witnessed others, as well as studying in great detail the campaigns of outstanding leaders of the past. In none have I observed such effective resistence to the heaviest blows of a hitherto undefeated enemy, followed by a smashing counterattack which is driving the enemy back to his own land. The scale and grandeur of this effort marks it as the greatest military achievement in all history."

If the West had responded by an equally strong push on Hitler's bare rear, the war might have been settled in 1943. But the world and its military experts refused to believe their eyes and was sure that Russia must eventually be completely vanquished. Hopkins wrote Churchill: "There is still an amazing number of people here who do not want to help Russia and who don't seem to be able to pound into their thick heads the strategic importance of that front."

49-3-128

Lord Beverbrook wrote in 1943: "Can we afford more time for preparation? The Germans have a most powerful army in the East. The Russians used up men and resources at a heavy rate last winter in an offensive which stopped short of its fullest aims. There is always the risk that Japan will stab in the back. It cannot be said that Moscow, Baku or Leningrad are out of danger. It can still less be said that we and the Americans could in any measurable space of time win without Russian assistance."

Stalin pled in vain for counter attack on Hitler's rear; but it was not until July, 1943, that the Americans and British attacked southern Italy and did not reach Rome until June, 1944, And Eisenhower did not land in Normany until that same month, ~~when~~ after it was clear that Russia was driving Hitler to the wall.

49-2-129

The Western armies ~~stalled~~ had stalled ~~still~~ hoping that Germany and Russia would destroy each other and thus eliminate the two greatest threats to the restoration of the former world industrial imperialism. They were deceived. Russia proved stronger, far stronger than they thought possible. She conquered Germany and entered Berlin, April 30, 1945, just as the allies captured Italy and three months after the near disaster of the Bulge. Even the nibbling at Africa began late in 1941 and carried on until 1943. Then in June 1943, the Allies tried to take Italy but were held back until 1945. Asia conquered by Japanese refused on Japans' defeat to return to her colonial role. The world had to be recast with Russia as one of the main partners, with Asia starting toward autonomy not simply in political control but in economic independence.

It was here that Roosevelt turned back from war to economic reconstruction and played his greatest role, disastrously interupted by death in 1945. Britain, interested in her African and Asiatic empire, had turned her strength to North Africa instead of France and Germany. The United States was induced to join this effort and then strike at the Mediterranean and the Near East instead of Germany. There was shrewd calculation here, to appease the certain wrath of Hitler by saving him from defeat in Europe, while strengthening British hold on Asia and the near East, and using this for bargaining after Hitler's delayed triumph. The sudden uprush and miraculous foray of Japan threw consternation into both Britain and America. Russia instead of figuring as a threat and nuisance who might serve to weaken Hitler, became the one great nation which might wipe out the German menace and contain Japan.

Here Roosevelt rose to statesmansip. He set out to build friendship with the Union of Soviets and dragged Churchill with him. The only man in the world at the time capable of getting the trust and friendship of Stalin was Franklin Roosevelt; and he accomplished this by frankness and honest dealing. He knew that Stalin was no fool nor barbarian. He knew that Russia had demands and was capable of enforceing them. He knew that Stalin kept his word but was not to be misled by flattery nor double talk. Personal conferences were arranged between Roosevelt, Churchill, Stalin and Chiang Kai-Shek at Cairo, Teheran and Yalta, and at a cost in sheer physical strain that killed Roosevelt. But it brought peace to the world. The Soviet Union denounced its neutrality pact with Japan in 1945 and Japan was called

49-2-130

upon to surrender or face complete destruction. She refused and was blockaded. On August 6, the first atomic bomb was dropped and on the 14th Japan surrendered.

Stalin had demanded a strong attack from the West through France and Germany, with war material to keep his armies in the field; in return for this, Russia had offered 15 million lives and the destruction of her best in new industrial regions. After peace, she wanted the cordon sanitaire under her control so that the threat of Western invasion of Russia through the Baltic states, Poland and the Balkans should be stopped forever; and she asked Western tools and machinery to rebuild her stricken economy after she had delivered the world from the threat of Adolf Hitler.

Roosevelt offered continued and increased supplies; pushed the long delayed Western attack; did not oppose the eventual annexation of the Baltic states and in turn asked the entrance of Russia into the War against Japan. This was the story of these four world conferences, which stopped the war and sought to stop all war forever by eventual world organization and understanding. In March, 1945, Roosevelt reported to Congress on Yalta:

"The structure of world peace cannot be the work of one man, or of one party, or one nation, it cannot be just an American peace, or a British peace, or a Russian, or a French or a Chinese peace. It cannot be a peace of a large nation or of small nations. It must be a peace which rests on the cooperative effort of the whole world.

"It cannot be what some people think--a structure of complete perfection at first. But it can be a peace, and it will be a peace, based on the sound and just principles of the Atlantic Charter--on the concept of the dignity of the human being--and on the guarantees

49-2-131

of tolerance and freedom of religious worship."

Tremendous further agreements were necessary and the implementation and refining of those agreed on in principle. Had Roosevelt lived, this had every chance of being accomplished, not without friction, but with faith, understanding and good will. But at Roosevelt's death, Big Business stepped in on both sides of the seas to stop the Soviet Union from restoring her economy; to retain the industry and land monopoly of the Baltic States and the Balkans; to keep the Soviets out of the Germany which her blood had redeemed; to renew on a bitter scale the fight against communism. Here was built the foundations of a Third World War.

Joseph C. Hirsch wrote, in the CHRISTIAN SCIENCE MONITOR, "The Yalta Conference stands out as a conference of decision. The meetings which produced that Atlantic Charter and at Casablanca, Teheran and Quebec were declarations of policy, of intents. The meeting at Yalta was plainly dominated by a desire, willingness and determination to reach solid decisions."

Hopkins later said: "We really believed in our hearts that this was the dawn of the new day we had all been praying for and talking about for so many years. We were absolutely certain that we had won the first great victory of the peace--and , by 'we', I mean ALL of us, the whole civilized human race. The Russians had proved that they could be reasonable and farseeing and there wasn't any doubt in the minds of the President or any of us that we could live with them and get along with them peacefully for as far into the future as any of us could imagine."

44-2-132

So Franklin Delano Roosevelt died in the 63rd year of his life and in the twelfth year of his reign as President of the United States. This was a man! A tall, handsome athlete, he was stricken in his young manhood by a malady which would have sent a lesser person into bitter, hopeless old age; he was rich and never played, but worked tirelessly to keep wealth from suicide, and poverty from despair; he was a gentleman but became the target of gutter-snipes who used a venal press to make lies true and paint Truth as a lie; he was hated by every jackal who dogged his life and desecrated his grave, but loved by every honest man. He saved the British Empire and the French Republic by firmly grasping the hand of Russia and letting her pull them and the United States out of defeat; he was father of a family which from mother to grandchild posed him every problem of life which can try a man's heart; he neither whined nor whimpered, but could curse Hell in Heaven to summon Right. In all and with all, he kept his soul serene, met the mornings with a smile and talked to the hearts of his countrymen as never President talked before. He died in harness--that harness of pounds of hard steel, under which he grimly bent every waking hour. His reach was not wide but his grasp was mighty, and gripping, he

Never faltered but marched breastforward
Never dreamed tho' right were conquered,
Wrong would triumph; held we fall to rise;
Are baffled to fight better
Sleep to wake.

49-2-133

CHAPTER VI

THE WITCH HUNT

We are a frightened people. Fear amounting often to hysteria fills the air. In coming years, we will look back on ~~this day~~ 1950 with astonishment, explaining laboriously to our grandchildren why sane people acted as they did and yet wanted right and justice to prevail. We are becoming a police state, with secret espionage, tapping of private telephone conversations, and filling of dossiers of accusations against thousands of persons unaccused by police or courts, but denounced by gossip, rumors, hearsay and the testimony of professional informers. Our freedom of speech, writing and assembly, is widely curtailed, and courts and juries are under suspicion of reflecting our fears rather than dispensing justice; for many of us, live in fear of losing our means of livelihood, of having our income decreased, or our property impaired or lost. And all this, so mindful of Germany under Hitler, arises from the widespread belief that the Union of Soviet Socialist Republics and the doctrines of Communism and socialism, are threats to our security and our continued existence as a nation.

Our plight is psychological and part of a world-wide reaction to two of the greatest upheavals the world has ever known; with so many millions of people killed, wounded, crippled, driven insane and sent homeless and wandering, as to defy accurate calculations; with so great destruction of homes, wealth, and materials, tools and machinery as to make full restoration a matter of centuries. This in itself calls for patience and charity, but even more for clear understanding. We must seek and know causes, so that this abnormal situation shall endure no longer than it must and never recur if we can prevent it. For civilization and culture, art and faith await its passing.

49-2-134

One cause of our present plight lies in the structure of our government. The Constitution of the United States is not perfect. The wonder is that the eighteenth century political theorists were able to do so fine a job as they did. The weakness of our government is the doctrinaire effort to separate the executive and legislative, which in times of crisis may paralyze effective government. It did so in the term of Buchanan and resulted in Civil War. It would have done so in 1932, had not Franklin D. Roosevelt become president, and united in himself executive power and control of legislation, to an extent seldom accomplished before in our history. Suppose Harry Truman had become President in 1933, or Herbert Hoover?

Thus, there died in April, 1945, just at the end of the Second World War, a man who to an unprecedented degree united in himself the power of making and carrying out of law and helping in its interpretation. His ability to do this rested on the will of the people who could hear his words and arguments with their own ears and who turned deaf ears on an almost united press and widespread and bitter opposition.

On the other hand, in April, 1945, there came suddenly into power an accident of political manipulation. It was not the fault of Mr. Truman that he had forced upon him a position of great and even appalling difficulty. It was the fault of our impossible American assumption, springing again from the eighteenth century, that government being of negligible importance, can be handed to any chance person and done by him as well as by the next, since it is of small import, compared with manufacturing, trade, and engineering. So for five fatal years, a man without training, preparation or background, was called to lead the most powerful nation in the world and through it to seek to set the course of future civilization.

This was a calamity of measureless proportions, even granted that Truman had nothing but the best of motives. For he did not in the least realize that immediately the hand of a strong and sophisticated executive was re-

49-8-135

moved, the suppressed and frustrated desires of scores of interests would move into action; and in such case, the mighty appeal to public opinion which Roosevelt used so effectively had disappeared. For now, five years, the full effect of powerful and organized industry with its monopoly of the press and of the news-gathering associations in the United States has been felt in full force. Where can Americans get the truth these days? Not certainly from the Big Business interests which own the sources of news and the persons who interpret it. Screened by press and magazines, industrial and business interests moved into control of government before the Truman administration realized what was happening.

In 1945, two atomic bombs were dropped on open, unprotected cities, killing 150,000 men, women, and children. This marked an era in human culture. That same year, Lend-Lease was suddenly terminated. The Soviet Union had been bled white; much of her best new industrial installations had been destroyed; she had given at least 15,000,000 lives to save the world from Hitler. She had been granted lend-lease of war materials while fighting; but suddenly, with peace, she was refused a cent for reconstruction. Others got loans; not Russia; although the United Nations Rehabilitation Administration helped a little.

This year, also, James Byrnes of South Carolina was made Secretary of State. He had no knowledge of the history of foreign affairs nor economics. His knowledge of democracy arose from a political career in South Carolina, where from 70 to 90 per cent of the electorate is disfranchised, allowing men to go to Congress and stay there indefinitely, supported by one-tenth of the number of electors required for a Congressman in the state of New York. It was Byrnes who "got tough" with Russia and began the overthrow of the confidence and friendship built by Roosevelt and Hopkins. In 1946, the pace backward hastened.

Further, Truman was induced to support by his presence and applause a demand by Churchill that the United States and Britain join forces against the

49-2-136

Soviets, while Henry Wallace was working for understanding and peace. As a result, Wallace was forced out of the cabinet as Secretary of Commerce, and the United States adopted an atomic bomb policy of secrecy and threat. In 1947, Truman by-passed United Nations leadership and entered on a program which meant the attempt of the United States to control the world. UNNRA was discarded entirely as giving too much aid to the Communist countries; the "Truman Doctrine" of unilateral effort on our part to contain Communism was announced and the Marshall Plan to aid Europe by financing European industry for trade with the United States. George Marshall, a military man with small knowledge of diplomacy or history or economics, was put forward to initiate this economic program for Europe, by being made Secretary of State to succeed the inept Byrnes. All persons showing evidence of revolt against control of government by business were pilloried by the Attorney General and a list of ninety "subversive" organizations was drawn up, without the organizations being given opportunity of hearing or defense. Signs of economic depression, through rising prices, began to appear, and organized business began its fight against Labor through the Taft-Hartley bill. Too late, Truman tried to prevent this sabotage of the Roosevelt New Deal His veto was overwhelmingly defeated.

In 1948, we moved faster toward war and the police state. The Atlantic Pact took the matter of peace and war out of the hands of the United Nations and split the One World of Willkie's vision into two worlds with the United States pledged to arm European soldiers to do the brunt of the fighting in a third World War. Hope of understanding with the Soviet Union was surrendered and she was openly named as the enemy against whom we were arming and securing military bases. Suddenly, on March 17, 1948, President Truman urged, it is said, by misinterpretation of facts sent out by one our spies, almost asked open war. He told a joint session of Congress that the Soviet Union and its agents had "destroyed the independence and democratic character of a whole

49-2-1-34

series of nations in Eastern and Central Europe," and was conspiring to extend their domination over all of Europe. To combat the "threatened" Communist control and police state rule, he urged immediate enactment of the Marshall European Recovery Program, universal military training, and restoration of the draft.

Meantime, the leaders of the Communist Party were arrested. Men were being threatened for supposed sympathy with Communism; for refusing to reveal their co-workers; for treason. The persecution of Hiss began; Duggan and Smith committed suicide; and in Berlin, the "airlift" of materials into Berlin began over the Soviet zone, and in logical sequence of the utterly impossible attempt to divide Germany between enemies. From here we drifted to the suicide of Forrestal, just resigned as Secretary of Defense and representative of finance capital in government. In his delirium he saw the Russian army upon us, just as many a saner American also imagined. This tragedy was capped by Truman's calm, almost jaunty announcement of our development of the hydrogen bomb.

49-2-138

What forces were back of this descent into hell? Not one force, but many, and not at first united; competitive business, small in extent and carried on after the American tradition, wanted war to cease and business allowed to proceed without the encumbrances of war restraints. It cut down the army and tossed away price controls. But organized and monopolized Big Business, on the other hand, knew that the old prewar conditions were obsolete and that the United States, in order to maintain its war-geared industry and mass production at full capacity and avoid depression, must have world markets in Europe, Asia and Africa.

In other words, the World Market which the First World War had destroyed, with its Gold Standard of value, under the hegemony of the British Empire and France, with Germany and Japan edging in, must now be restored by the United States with the dollar as the world standard. After the First World War, this

development seemed axiomatic and doubtless this belief hastened the depression.

When World War II opened, Big Business in the United States did not desire to save the world rule of the British Empire. The ambitions of Germany and Italy seemed reconcilable with our leadership, until the world grasp of Hitler alarmed us, and the rashness of Japan threw us into hostilities. To the dismay of Industry, we found ourselves eventually in alliance with the Soviet Union, the one power to whose whole outlook and plans, Big Business was fundamentally opposed. But there intervened the conviction that the inevitable end of this war would be the annihilation of both Germany and the Soviets, with the United States industry as heirs.

Meantime, the overthrow of Japan must be certain. For Japan, this nation feared, with perfect fear; she was colored, and, therefore, "inferior." Japan was destined to dominate Asia, unless beaten to her knees, and Asia was just the sliver of earth staked off specifically for American control. Japan's sudden and phenomenal sweep of conquest had shown the colored peoples of the world that the white race, with American wealth and the British navy, was not invulnerable; and, finally, we believed that Japan could only be held by the Soviet armies.

Big Business was more than content at Yalta to buy Soviet alliance against Japan at any price, because Japan was still a formidable and unconquered force, and the atom bomb untried, and Russia had armies immeasurably superior to the combined might of the world. Let Russia have the Baltic states; let her dominate Poland and the Balkans, especially since with her development definitely held up by the greatest military effort in history and with her communistic state soon bound to fail, she and her satellites were sure to fall into the industrial orbit of the United States.

It did not work out that way; and when we saw the Soviet Union emerging from war, hurt but not crippled, bloody but not destroyed, Big Business suddenly became military-minded and cultivated the idea that armed conflict with

Russia was necessary to world domination of American industry. This attitude was encouraged by the fact that unless industry continued to profit by huge military outlay, another collapse comparable to that of 1929 might develope. Thereupon, Big Business got back of the vast expansion of military expenditure which has marked recent years. The military leaders whom Truman put into high political position helped this outcome. We had a General for Secretary of State; and Admiral remained as his close military adviser; generals represented us in Russia and Germany as diplomats and the military was powerful in atomic policy.

On the other hand, the public had small chance to decide on the facts of the situation. The Russian Revolution had at first appealed to American traditions. Then the nation was alienated, first by investors like Hoover, but more by the overwhelming and world-wide propaganda of Leon Trotsky. By 1939, we regarded Stalin as a usurper and the Soviet Union as an utopian dream; unscientific, impossible of realization and insincere. Then, paradoxically, led by Roosevelt, we found ourselves allied with the Soviets in a life and death struggle. With the heroic defense and triumph of Stalingrad, Russia rose in popular appreciation.

49-2-1392

But the apprehension of Big Business was quickly borne out. Russia was not about to collapse and although she needed our machinery and consumption of goods, our offers under the Marshall Plan to integrate her into our economy was brusquely refused. Then the government and the press began to build up Russia as the great enemy of democracy, and as an imperialism set to dominate the world and establish the slave state, even in America.

The campaign to prove this was vicious. It became impossible not only to get an audience for the Russian side of the controversy, but it became dangerous for anyone even to believe that Russia had any side to defend, or even to associate with Russian sympathizers, or to believe in any of the communistic aims. The opposition to the Soviets and hate and fear of Russia

reached a crescendo. There were persons of standing who did not believe this anti-Russian propaganda. There were others who were hesitant and unconvinced. There were some who sincerely believed in the Soviets and their future. All these groups together, however, were united in feeling that wherever the Truth lay, War was not the solution. They united in March, 1949, in a great demonstration, not in favor of the Union of Russian Soviets; not in favor of Communism or Socialism; but in declaring their determination:

"To create an environment in which our lives prosper; to discover a process whereby man's fruitful aspirations may find a future in the atomic age; to contribute to the establishment of an environment in which reason may operate as a scourge of fear and hatred; to take from the shoulders of the creators of the earth's wealth, its people, the dead burden of armies and their armaments and to remove from their minds the rending shocks of insecurity; to reaffirm the duty of artists, scientists and workers in the professions to toil for a society of nations founded on justice for all."

They continued in their resolutions:

"The hour is late to unite for peace but there is yet time to save the peace if we truly unite. Humanity does not want another war. Peace is necessary and peace is possible. The maintenance of peace is the responsibility of all peoples. If the American people recognize their solemn duty and affirm their will, they can do their share to maintain peace.

"The peril of the times has united us who are gathered here. The deliberations of this conference have strengthened our unity. The issue of peace, irrespective of difference on other subjects, we propose to take our stand."

And they said this is our stand:

"We wish to open and keep open the channels of communication among the peace-minded peoples of all lands and in particular between our country and the Soviet Union. It was to this purpose that the conference was called. We have succeeded in demonstrating in demonstrating that the channels can be kept

44-2-140

open. Those who have tried to discredit our efforts, because they have already yielded to fear, hate, and hysteria, have failed in their purpose. We invite them to reconsider their position and to join us in a common endeavor to save the future."

This was the first postwar effort to focus public opinion on Peace, and oppose propaganda for war. The call was signed by 550 persons, representing an excellent cross-section of American life. Representatives from the Soviet Union, Poland, France, and England, many of world-wide renown, accepted the invitation to attend and speak.

The result was astounding. The government of the United States, through the Secretary of State, denounced the conference, even before it met, as a "sounding board for communist propaganda." It denied many distinguished foreign visitors visas, alleging they were Communists, which in several cases was untrue; and, then issued visas only to those who represented communistic states officially, so as to prove its contention this was a communist demonstration promoted by Russia, ~~and then~~ yet treated these representatives when they arrived like criminals, by refusing to let them travel or speak outside of New York City.

49-2-141

The Federal Bureau of Investigation and the Un-American Committee of Congress sent observers to the meetings. Pickets were solicited by organizations and churches; and by newspapers, which reported their number as 100,000, although they never exceeded 2,000 and were usually a few hundred. Riot squads of police were ostentatiously put on duty. Two Canadain delegates were arrested and deported at the opening dinner. A press bureau was set up in the hotel which announced that sponsors were withdrawing "by droves;" that Russia was paying the expenses of the meeting, and that secret Russian police were present!

With the aid of the State Department, a small rival Congress was organized and given wide publicity. Only two newspapers made any attempt to report

the speeches, and in the nine leading New York dailies, during the week of the conference, there were 1,090 items on the Congress charged with appeal to emotion rather than to facts; 205 items making unsupported charges; and 139 items which were quite false. Of all the items, 468 were distinctly opposed to the conference; 28 were favorable, and the rest were neutral.

The United States thus gave notice in March, 1948, that war was no longer debatable but was a set policy of the Government. Nevertheless, the thousands of people who braved police and spies to attend the week-long sessions of this conference showed that the official attitude did not reflect the belief of all Americans. Professor F. O. Matthiessen of Harvard, who in 1950 committed suicide, because he could not reconcile Socialism and Christianity with present trends, said to the assembly: "Fifty years ago Leo Tolstoi sent a message to America which we might well heed today. Urging us to rediscover the greatness of our writers of the 1850's he wrote, 'I should like to ask American people why they do not pay more attention to these voices -- hardly to be replaced by those of financial and industrial millionaires, or successful generals and admirals -- and continue the good work in which they made such hopeful progress.' "

That something is radically wrong with the United States today is manifest. Just what is the cause? One cause certainly is the growth of private and corporate wealth and its increasing concentration in a few hands. We sense this more or less vaguely, but we dislike to discuss it. We cling to the idea that wealth is "private" and is nobody's business but the man who "made" it and now has legal title to it. We have not yet fully realized that wealth is a social product, but that its ownership is mainly in the hands of men who by ~~its~~ this ownership can exercise oligarchic power. It does not follow that all possessors of wealth are criminals. They may be as much victims of a system as our paupers. Nevertheless, it is our duty to understand just what the present ownership of wealth is doing to our social order.

That it is plunging us into repeated financial crises is well known. In 1837, 1857, 1873 we wallowed in depression. Omitting minor upsets, we suffered again from low economic periods in 1893, 1907, and 1929. Meantime, we have today eight hundred huge corporations which increased their capital 64 per cent between 1939 and 1945, and which literally own America; and they are absorbing the others at an increasing rate.

Government reports in 1948, declared that 8,000,000 American families lived on less than $1,000 a year; 15,000,000 on less than $2,000 annually, and 24,000,000 had less than $3,000 on which to live. The Bureau of Labor demands $3,000 for a healthful standard of living. The lower fifth of our families received but four per cent of the money income and the top fifth nearly fifty per cent of it.

Corporate profits have so increased that the Federal Trade Commission has said, "if nothing is done to check the growth in concentration, either the giant corporations will ultimately take over the country, or the Government will be compelled to step in and impose some form of direct regulation."

But this government, which should step in, is largely directed by business men who represent these corporations. Bankers, executives of mail-order houses, insurance officials, cartel attorneys all stand high in cabinet and administrative positions.

The development of atomic energy, which when we recover from war hysteria, may be the greatest boon to human comfort and relief from toil, is now being surrendered, so far as possible, to the control of private business. The nation paid the huge bill for its development, but private industry got the contracts, controlled the administering advisory groups; and instead of building up a government industry, private corporations received knowledge of techniques, private patents, and fees for management. Lilienthal himself said, "private industry can alone develop atomic industry and must be given opportunities for profit."

49-2-143

It has been authoritatively said that "concentration of economic power creates great inequality of opportunity, sustains conditions prejudicial to democratic ideals, and makes those who are dependent on or subservient to the powerful, the instruments of the interests of the few, with little consideration for the welfare of the many."

Is it any wonder that many men over a long period have seen in socialism a cure for the ills of America. Scott Nearing says;

"Money reform, trust regulation, the protection of small business concerns, the control of privately owned public utilities, have been tried in the United States since the Civil War. What has been the result? Step by step the economy has passed from individual to corporate ownership. Year by year the stranglehold of Big Business has tightened on the economy and on the country, until a point has been reached at which a rich, powerful minority owns, controls, and dominates the American scene, securing its income and exercising its authority in the name of an economic apparatus which can no longer function except on a basis of large-scale military spending."

Albert Einstein says:

"I am convinced there is only one way to eliminate these grave evils, namely through the establishment of a socialist economy, accompanied by an educational system which would be oriented toward social goals. In such an economy, the means of production are owned by society itself and are utilized in a planned fashion. A planned economy, which adjusts production to the needs of the community, would distribute the work to be done among all those able to work and would guarantee a livelihood to every man, woman, and child. The education of the individual, in addition to promoting his own innate abilities, would attempt to develop in him a sense of responsibility for his fellow men in place of the glorification of power and success in our present society."

The rise of modern business in the United States has been instructive.

First we had the small, separate shops and factories for making goods and others for selling them, both financed by savings as capital. They were in keen competition with each other for trade, and got advantage usually by better methods, harder work, and greater ability. When such shops wanted to expand beyond the limits of capital saved, they borrowed money from the local public through banks. Then shops became factories with savings in method and material and power control, and with a laboring class of poor artisans who sold the future products of their toil for present food and shelter; shops became stores, with similar economies, with white collar wage workers and with increased sharp practices to kill off competition, in addition to better methods.

There grew up but one standard of success in business and industry, and that was the power which it put in the hands of its owners to secure goods, services, and social standing.

This so-called Profit was increased by the beginning of combinations in industrial effort; and concentration in ownership, not only bigger stores and factories, but by vertical union of factory and store , and even of factory, store and mine; and horizontal combination of many stores and factories into larger units. But this required increased planning of industry, large purchase of materials and machinery and big wage funds with longer wait for the end result. Those, therefore, who secured control of goods and money, loaned these to industry in return for a share of the profit and control of object and methods. Industry, both processing and selling, became integrated in great groups, which began not only to cover the nation but the internation. World finance and a world market appeared.

All this, especially as laborers became educated and united in unions and conscious of political power, called for increased control of government by industry, of industry was to rule, in order to guide the power which the masses through political democracy began to exercise over industry; and, also, to secure for industry, certain

49-2-145

powers of government which industry must have, to control the power which profit puts in its hands. Legislative lobbies, bribery, and control of news increased.

Certain kinds of business had long been carried on by government because it was difficult to so organize them as to yield private profit. Such government industry was subject to democratic control, and soon the public, especially labor, was beginning to demand that government go further into industry, especially into those vast monopolies like railroads, telephones, mining, and even manufacturing of certain integrated categories. This theory of democratic control of business and industry, called Socialism, was bitterly opposed by industry, not because it entailed planning, which all industry must use; not because it could not be done, since the same kind of persons run industry, as vote and run the government; but because while industry is autocratic in control, government is at least to a degree democratic.

Democracy in industry would, on the other hand, cut down private profits; that is, it would decrease the present power of industry to control through a few private owners, industrial processes, aims, goods, and ultimate distribution.

This is a tremendous power, the greatest in the modern world; and since the impact of the Industrial Revolution, it has been challenged and efforts made to subject this power to democratic control. It was thought in the nineteenth century that this could be accomplished by voluntary effort in group cooperation. Then gradual evolution of state control of industry was tried.

But industry, through control of the press and education, convinced most men that State socialism was an inevitable failure. Nevertheless, with modern national monopoly and cartels, it became clear that something must be done, if human effort was not to succumb to oligarchial control, at just the era when technique was able to make plenty, and content and freedom of thought

and imaginatiou could be universal. This was the basis of the extreme proposal of Communism, which sought to base industry on natural law and erect a state with industry under the complete control of democratic government.

The trend toward socialism and Communism was precipitated by the breakdown of the capitalist system in the first quarter of the twentieth century, because of inner quarrels among its dictators. The world market was broken up, with the cartels and state monopolies which supported it. World industry because of war sank in unprecedented depression and its revival was sought by a new orientation of economic power in the West and by communist revolution in Russia, all of which led to a second and more devastating war.

Individual wealth in itself is not evil but useless. The amount which a person can consume in food and clothing is quite limited; housing and personal service can be costly and extravagant and we have some palaces and principalities in the United States! Of course, luxury and entertainment can reach large figures. But American wealth has not on the whole been noted for conspicuous expenditure. Our huge profits have been used for power over production, exchange, and consumption, and over government; with the paradoxical object of accumulating more wealth for more power; and also lately to found dynasties of industrial rulers.

Two characteristics mark the power of industry in the United States. One is the effort to make the State furnish the capital and to take the risks while turning over management and profit to private industry. When complaint was voiced that industry opposed the development of the Columbia River power, the president of the National Association of Manufacturers said that it was not opposed to developing areas like the Columbia River, it is just that the job was so vast that the government should do it, providing after it was done, private industry was allowed to take it over!

Secondly, industry is steadily and with determination increasing its control of government, local, state, and national, in administration and

49 - 2 - 144

through the courts. This industrial control of government is now reaching out to world domination. The world market is to be restored under American instead of British and French control. This was to be accomplished by a huge navy, subsidies to shipping and aviation, and by the Marshall Plan.

The Marshall Plan was conceived in charity but carried out for private profit. It was put into the mouth of a well-intentioned military man who knew nothing of business, but did know poverty, destruction, and need. It was announced on the presumably unprejudiced campus of a great university whose graduate school of Business, endowed by rich industrialists, has been of immense influence in popularizing American business methods. It appealed at once to the generous heart of the American people; but it was implemented by a government directed by representatives of finance capital and carried out by Big Business.

Before the Marshall Plan was inaugurated, industrial production in Europe as a whole had reached prewar levels; the recovery in agriculture was not so fast and that in foreign trade was fair. The Marshall Plan came in with political, strategic, and, finally, economic purposes. First, it was to maintain "the American way of life," and oppose postwar planning, especially communism. Russia and Eastern Europe immediately refused to participate. Molotov said that the internal policies of each nation must not be subordinated to foreign support. Even Western Europe, according to the New York Times, feared there would be "a goodly number of plums pulled out of the pie by big American companies in the form of markets and commitments of European governments to keep hands off their operations."

This was immediately proven, by the breaking up of the natural and essential east-west trade, through which Western Europe received agricultural products for machines and manufactures. But this would give Russia "strategic materials" and was forbidden. On the other hand, the exports of the United States to Western Europe were not on the whole what Europe wanted and were

too highly priced for Europe's exports. Moreover, what could be bought from America was decided by Americans. The "gift" was made, but must be matched by a fund set up in the benefiting nation. The spending of this fund was controlled by United States officials. Europe needed capital equipment; but America limited and directed this and compelled the purchase of certain goods she wished to sell,--trucks, soft drinks, and often surplus stocks in the United States. On all of these goods, prices rose in the United States and freight rates skyrocketed, especially as fifty per cent of the carrying vessels must be American.

Moreover, the Marshall aid was used for an American imperialism in colonies. For "strategic" purposes, the United States required colonial products to the amount of $250,000,000 a year; private American business organizations, during the period 1946-1948, were investing a billion dollars a year in foreign projects and had in 1949, $15,000,000,000 throughout the world in quasi-colonies. America complained of slow recovery and Europe complained of American prices. America suggested ways by which through dropping of tariff walls and integrating methods of economy, Europe might purchase more from America. But the United States refused to lower her tariff walls or to reduce prices to any appreciable degree.

Britain solved her plight in part through her colonies; cocoa and palm oil in West Africa and tin and rubber in Asia furnished her goods which she could sell at high enough prices in America to help buy food, provided she kept African and Asiatic wages down. This made trouble on both continents.

In two great areas which America counted on to complete her world economic empire, Eastern Europe and China, the Soviet Union and her followers declined to allow America to infiltrate and dominate. These countries refused the Marshall Plan, thus removing an immense prospective market from the United States. In China, we trusted Chiang Kai-shek to keep that great market and reservoir of labor and materials subservient to the United States, as heir

49-2-149

of the British Empire. This plan backfired and China joined the Russian orbit. In the Middle East, the United States and Britain are still locked in bitter but polite rivalry for control of oil, which is blocking the development of Israel.

This forced American Business to take another step and depend on the threat of war to break the communist group. The Atlantic Pact was adopted ostensibly in defense, but in reality as an offensive against the Soviets backed by the atom bomb. It contradicted the Marshall Plan by compelling Western European nations to spend from one-fifth to one-third of their income for war. This has finally forced us to promise a Plan to finance war in Europe. Thus Big Business based its domination of the world market and restoration of nineteenth century capitalism on exploitation of Europe and war against Russia and socialism; and financed this venture by an unprecedented expenditure on preparation for war. This so far has kept the United States out of the depression which threatened to follow war, murder, and waste. Moreover, it made one further advance: colonies were still buttressing the economics of Britain and France, Holland, and Belgium. American business financed in rubber in Indonesia, copper and uranium in the Belgian Congo, and gold, minerals, and diamonds in the Union of South Africa. It proposed by the celebrated Point Four Program to penetrate other colonial regions.

Meantime, the American people had no clear understanding of the economic tangle which was bewildering the world, while Big Business made all-out effort to lay the blame of distress, frustration and unrest on the Soviet Union, and built up the nation to hysterical suspicion of communism and socialism. They called them Heresy and Conspiracy, Threat to Freedom and Democracy. They prepared them for a Holy Crusade, led by the Christian Church. If the strong common sense of the nation refuses the adventure of war and secures an era of peace and freedom, in which to study and reflect, it will soon discover that this development of Big Business points directly to the Government in Business

49-2-150

and the Welfare State.

Already many business organizations are equal to states in size and wealth; already many of them need the powers of government to function properly; already the government is furnishing capital for much of the activity of private enterprise, and already government enterprises, like the Tennessee Valley Authority, have been enormously successful. Why then should such enterprises become the property of government rather than remain private? Whether private or public, the same sort of folk conduct them, with the same technique, why then change? Because of one tremendous reason: public business organization is controlled in object and method by democracy; private business is at best an autocracy and at worst a world oligarchy. Its objects vary from personal philanthropy to a revival of colonial imperialism and slave labor. Moreover, the fond hope that labor unions in alliance with private business would work out a voluntary democracy has failed to come true, as the Taft-Hartley law indicates.

Meantime, the socialization of America is increasing. A textbook in use in the public schools was recently banned in Texas because of this true passage: "The United States is called a capitalistic country, but it does not have pure capitalism. It has capitalism subject to increasing Government control, as our manner of living becomes more complex. The country is capitalistic with strong socialistic and even communistic trends. The postal system, power projects, and progressive taxes are bits of socialism; and public free education and old age assistance are examples of communism 'to each according to his need.' "

Despite this and other efforts to conceal this truth, socialization grows as industry expands and consolidates. To preserve the forests of the West, for natural beauty and water, the United States owns 53 per cent of all land of the eleven states of the Far West, and its function is unquestioned, save by selfish private interests, because the United States is

49-2-151

consuming twice as much timber as it is growing; despite government efforts, three-fourth of our forest land still remains in private hands, with few efforts at conservation.

The great and outstanding example of socialism in our government is the T.V.A., the government-controlled ~~and~~ development of the great Tennessee River valley, for which Senator George Norris and his colleagues fought for years and which is still periodically under attack. Similar developments of all our great river systems would save us from annual floods, death, and sickness and destruction, while preserving water and furnishing cheap power. But so far Big Business and monopoly have either blocked this development entirely or secured most of the results for private profit.

This illustrates a new and growing demand from private capital. Let the taxpayer furnish the capital and take the risk; let Business be run by oligarchial methods and mainly for private profit and not for public welfare. Then Business will take over and conduct the project without interference from government. It is this demand of business for control of public monies plus assumption of many governmental functions, that is leading many persons, who know nothing of theoretical socialism, to ask why control of the most important functions of life should be surrendered to private hands at public expense?

Contrasting with our great wealth in America is our poverty. An expert recently said at a Congressional hearing: "A third of all our people in the year 1948, a peak of American prosperity, had so little income, such meager culture, and living standards so low, as to be set apart. In effect, they were a drag upon the rest of us, unable to pull their full share of the load, denied many of the good things of life which we have, and a possible threat to our free democratic institutions."

The current taxation falls heavily on the poor. Sales taxes, the most

inequitable of taxes, are increasing in states and cities. Tax relief has gone to the rich; corporations pay twice as high taxes as in 1939; but ~~while~~ a man earning $5,200 a year pays nine times as much. Colleges engaging in business avoid $50,000,000 a year in taxation; and wealthy men by forming philanthropic foundations, not only escape taxes but gain increased control of industry without government ~~control.~~ interference.

This poverty does not bother many business philosophers. Barrons, the national business weekly say, "The cycle of boom and bust is a basic principle of nature. Planets have their orbits and years their seasons. Night follows day. Recessions and depressions are unpleasant, but there are times when recessions are needed. Lay-offs are painful, but they do induce those who are still on the job to work harder, and they tend to reduce the working force of the nation down to where it includes those who really want jobs... It is hoped that depressions are never abolished for they have many desirable features."

Poverty and uncertainty encourage gambling. It has been said that in 1949, the entire nation spent in gambling or sports $15,000,000,000, while for education, only $2,500,000,000; and for research in mental illness not over $300,000. Barkley, Vice President of th United States, has told the thoroughbred racing association of New York that the revenue from horse racing has been enough to operate the government of six states and pay off the debt of fifteen states.

A reporter says, "if there is one persistent American dream embedded in the subconscious of our modern American culture, it is the dream that someday, somehow, like a bolt of lightning, you are going to strike it rich. This is shown by horse players in iron betting machines, in the bingo players, and in the people who buy Irish sweepstake tickets, in audiences led by the radio give-away shows."

49-2-153

There is lawlessness and crime in the United States today, but in individuals this is explicable from the upheaval of wars with disruption of family life, poor schools and uncertainty of occupation. But there is a lawlessness which the nation faces helplessly, and that is the refusal of corporations to obey the law, or their power to prevent the enactment of enforceable law. So far our attempt to stop or control the concentration of capital in growing monopolies has had little success. Almost anything which a great, rich corporation wishes to do, it does, and public opinion seems helpless: "The trust, the pool, the combination, and other techniques of the past, and even the powerful trade association of the present are rendered quite unnecessary in these industries where the number of producers is so limited that a gentleman's world of 'live and let live' can be effectuated without formality, without overt evidence of collusion, and without fear of prosecution."

We are neglecting the national health. There are fewer medical students today than forty-five years ago; yet of 25,000 applicants in 1949, only 6,387 were admitted to medical schools. We need practicioners, hospitals, nurses; our mental cases are wretchedly cared for, with resulting increase of crime. We need socialized medical system for the nation; but the American Medical Association is fighting this, with a huge lobbying fund and trained lobbyists.

Because of war and interruption of normal building and repairs, the nation needs to build at least a million and one-half homes a year for ten years. The real estate and building interests have held this down to less than 150,000 units and also blocked modern ways of mass construction, while we allow rise in rents.

Four million American children are not in school and two million are being taught by teachers with substandard certificates. Hundreds of thousands of teachers are still receiving poverty-level salaries. There

is a nationwide shortage of school buildings. More than twenty per cent of the city children in the United States ~~were~~ are assigned to overcrowded classrooms and hundreds of thousands of pupils are on half-day sessions. There are 10,000,000 functional illiterates. "Comic books," the low form of literature which floods our newsstands, are the addiction and virtually the only reading matter in three out of four American homes.

The future of the United States rests largely on our colleges and universities, which train teachers, scientists, physicians, architects, engineers, lawyers and increasingly legislators, businessmen and journalists. Despite this, we have been spending a small percentage of our national income on higher education each year. In 1932, we spent on colleges and universities, one per cent of the national income, and in 1947, one-half of one per cent. We are spending half as much of our national income to educate almost twice as large a proportion of our population. Tuition has increased over fifty per cent since 1941, and the children of the rich have three or four times the chance to go to college as the children of the middle class and poor. Salaries of professors are too low to secure first-class teaching. Of one hundred who enter the public schools, only three go to college. Yet some fear these college graduates. The Chancellor of the New York Board of Regents recently objected to the belief that the government should provide opportunity for higher education for all who desire it: "We are likely to educate many more men and women than can earn a living in the fields which they have chosen or anywhere else, and they will become embittered with their frustration and will turn upon society and government more effective and better armed in their destructive wrath by the education we have given them."

This is the reason that propaganda is directed toward the public schools by Big Business, the government, and the military establishments. The National Association of Manufacturers has a well-financed program to

49-2-155

influence schools and screen textbooks.

The United States gives one hundred million dollars a year to colleges chiefly through the military establishment for research; and private industry gives another twenty-five million dollars in addition. Of the government subsidity the University of Michigan gets $5,000,000, Harvard $2,225,000, and Columbia University $3,300,000. This means business and the military influence, if not control, much of our higher training.

But most disturbing today is the Press, daily, weekly and, monthly; with newsgathering agencies, the films, and the radio. In 1947, a commission, headed by the Chancellor of the University of Chicago said: "The freedom of the press in the United States is in danger; for three reasons: its increased importance to the people; the decreasing proportion of people allowed to express their opinions; the inadequate service rendered the people by those who can use it; the habit of those who control the press of engaging in practices which society condemsn, and which it will inevitably try to control." The report added:

"Anybody with nothing to say can say it by mass communication, if he has a knowing press agent, or a considerable reputation, or an active pressure group behind him; whereas, even with such advantages, anybody with something to say has a hard time getting it said by mass communication, if it runs counter to the ideas of owners, editors, opposing pressure groups, or popular prejudice."

It is clear that wealth in the United States, represented by the large corporations organized for profit, own and control the press in the nation. The small papers and independent magazines are disappearing. These periodicals, have a difficult time existing. In the big press the owners pay fabulous prices for columnists and writers. They gather news from the ends of the earth, and color and slant it; they omit what they wish and in some cases actually invent and mislead. The periodical press is no longer a forum for

ideas and opinions, but chooses writers who agree with their policy, or are willing for a price to follow their line of propaganda. Once I wrote a balanced criticism of the effect of Roosevelt's New Deal on the Negro. The magazine editor to whom I sent it wrote back, briefly, "Change this to an attack on Roosevelt and we will publish it."

All the newspapers, with their enormous circulation and special services, must cater to their advertisers, who may indeed be their indirect owners. The advertising carried on by the press is one of the nations's biggest businesses and represents immense revenue. Last year probably $5,000,000,000 was spent on advertising. This represents not only a tremendous bribe for opinion, news, and silence, but a decisive psychological influence on the public mind. Newspapers, magazines, radio and television bombard the public with inducements to spend money, to such an extent that the public wants things they do not need and often wants them for the wrong reasons. Emotional immaturity is encouraged and waste arises from aroused demand for useless and harmful things. Almost any product can be sold America by a sufficiently wide, loud, and costly advertising campaign. This is peculiarly true in the immense sale of drugs and patent medicines.

49-2-157

Chemists are adulterating and poisoning food and the newspapers carry their advertising and the radio spreads their wares. Some of the best known nationally advertised products have been charged with fraudulent advertising and thousands of advertised articl s have been proved fakes. The Federal Trade Commission continues to issue these facts 365 days in the year, and the press, for the most part, continued to suppress the news.

Our Christmas holiday season has been turned into an orgy of purposeless spending and waste by manufacturers, retail merchants, and their advertising. Thus American culture has been turned from its higher aims and efforts into a machine for making and selling for profit, so as to make and sell again. So that meat is worth more than life and raiment is more valuable

than the body.

The recent curtailment of civil liberties in the United States is frightening. In 1940, the Smith Bill was passed which made thoughts liable to suppression; then came arrests of persons for refusing to reveal confidential data; a congressional committee publicly accused persons without allowing them legal counsel or names of accusers; the Attorney General of the nation pilloried dozens of organizations as "subversive," without giving them opportunity for explanation or for defense; men and women were arrested and jailed for refusing to tattle on friends accused of no crime; workers were discharged for being accused of believing in Communism. Finally, the eleven official heads of the Communist Party were arrested and tried in a court proceeding which had faint semblance of justice and, although no illegal act was even alleged, they and their lawyers were sentenced to jail.

The Taft-Hartley act was passed restoring court control of labor unions and limiting the right to strike and bargain. Foreign-born citizens have been threatened and hounded until today more than 150 non-citizens in twenty-one states are under arrest for deportation, while 3,000 others are under investigation, and 3,000,000 non-citizens and 11,000,000 naturalized citizens live in danger. Investigations and loyalty orders have been made. Civil servants have been investigated; with secret trials and arbitrary decisions, some eighty-three have been discharged and 900 resigned.

The American Civil Liberties Union adds that "1949 witnessed an unprecedented array of barriers to free association, of forced declarations of loyalty, of blacklists and purges; and, most menacing to the spirit of liberty, of taboos on those progressive programs and principles which are the heart of any expanding democracy." It is reported that 7,600 employees have been accused and are being investigated. Under President Truman's order 9835, a person is liable to investigation if he ever:

Spoke against racial and religious discrimination

Attended a social gathering, no matter how large, at which a "subversive" was present.

Contributed money to help the victims of Franco Spain.

Owned a low-cost life insurance policy issued by the International Workers Order.

Attended a public meeting of the National Negro Congress or any one of dozens of other legal, loyal, but liberal organizations.

Talked, even to neighbors and friends, about controversial issues.

A new State Department code of principles was adopted, even more drastic than the loyalty order. The Hollywood writers were intimidated; mob action prevented meetings of the Progressive Party; censorship of teachers and students came in universities. Columbia University, the College of the City of New York, Brooklyn College, Hunter College, all banned leading American writers; George Washington University denied a charter to the American Veterans Committee and the Young Progressives. Books of leading authors, living and dead, have been barred, like Arthur Miller, Charles Darwin, Thomas Paine, Louis Adamic, Stuart Chase, Charles Beard and others.

49-2-159

The University of Washington discharged three professors, who had been on the faculty from eighteen to twenty years, for unorthodox political views.

Alger Hiss, Judith Coplon and the Russian, Gubitschev, have been tried under pressure of public opinion, so that few persons believe them guilty of any illegal acts. Harry Bridges has been repeatedly tried and finally convicted on the testimony of hired witnesses. His real crime was the successful leadership of the Longshoremen in conflict with the shipping interests. Secret espionage and tapping of telephone wires by government agents have been resorted to, until Bernard De Voto, of Harper's Magazine, said publicly: "Representatives of the Federal Bureau of Investigation and other official investigating bodies have questioned me, in the past, about a number of people and I have answered their questions. That's over. If it is my duty as a citizen to tell what I know about someone, I will perform that duty under

subpoena, in open court, before that person and his attorney. This notice is posted in the courthouse square: I will not discuss anyone in private with any government investigator."

Almost every strike is called Communist inspired; therefore, the threat of communism becomes the threat of higher wages in the face of increased cost of living. The Progressive Party, fighting for the Negro vote in the South, was promptly branded part of the Communist conspiracy. The crowning indignity comes with the declaration of the Assistant Attorney General of the United States, Wheary, who says, that if the Supreme Court upholds the conviction of the Communist leaders, the Department of Justice will arrest and try 21,105 persons who "appear to be acting in concert with Russian interests."

Finally, there is before Congress now a bill which a Senator thus characterizes: "This bill, if enacted, would constitute the greatest threat to American civil liberties since the Alien and Sedition laws of 1798. Like that bill, it is the product of hysteria and frantic, unthinking fear. Like that bill, it would strike at the very foundations of our democratic institutions — the right of the people to speak their minds, to hear every viewpoint on public questions, and to associate together freely to advance their common views. Like that bill, it merits the opposition of all who cherish liberty."

Because the business interests which are dominating the nation, see no way of restoring the world market, under American domination, except through war on Russia and communism, the United States has become today the greatest military power which the world has ever known and is spending more money for war than any other nation ever spent. For military preparedness we are spending directly $13,000,000,000 a year; indirect expenses, like interest on war debts, pensions for veterans, foreign aid, atomic energy and the like, bring the total to at least $31,000,000,000, which is 71 per cent of our total outlay. Only five per cent of our gross national income goes to such general

welfare as health, education, housing, agriculture, communications, power and natural resources, and for regulation of trade and industry.

We have never before been an armed nation in time of peace. We have never spent so much money, or so much of our income for war. We have never given so much power to military men. This concentration of power is a threat to freedom, and the taxes to support it an intolerable burden to the whole nation. Moreover, the kind of war we are preparing for, is the most undiscriminating destruction ever envisioned. We propose to kill men, women and children in unprotected cities in unlimited devastation. Hessler, a former navy officer, warns: "The United States alone is building a strategic air force planned to lay waste to cities such as ours." In other words, it is the American concept of strategic air power which is guiding future war into the pattern of blind devastation. Today, the American people, whipped by a false hysteria by anti-Communist tom-toms, and frightened by horrifying weapons of their own devising, have become the world's only nation relying on the arms designed for systematic massacre. The threat of war by mass annihilation is a basic American foreign policy today.

Einstein, the world's greatest physicist, declares: "Disarm or we die." He says, "The idea of achieving security through national armament is at the present state of military technique a disastrous illusion." War and preparation for war are diving the nation mad. Science is its captive. "There is at present," says The American Association for the Advancement of Science, "a tendency in public thinking to relate scientific activity almost wholly to military activity." Edward Condon, who has been dogged and smeared, says that scientists have probably suffered more than any other group from the postwar loyalty hysteria. The attempt to advocate peace has met every obstacle. Foreigners of highest reputation have been refused visas because they came to advocate peace.

Because of the billions of dollars to be spent on war, there is no plan

49-2-161

of public works to give employment to the unemployed, no unemployment insurance, no decent wage increases, only $4,000,000,000 for housing when $17,000,000,000 are needed. Slums are thus being created quicker than they are being cleared. There is nothing for school buildings, nothing for subsistence for those unable to continue in school, nothing for scholarships, no disability insurance for young people temporarily disabled, no maternity benefits for young mothers, no youth centers to provide opportunities for sports and recreation.

We hire spies, of course. All nations in this crisis try to find out as much as possible about their neighbor's deeds and actions and aims. But when our "intelligence" breaks down or is exposed, we indignantly deny it and charge foreigners with lying. For such reasons; because our charity, real as it is for the taxpayers, is changed by the merchants to profit-making and economic compulsion, it is true as all travellers can testify, that Americans are hated everywhere in Europe. Their real financial assistance is either not known or it is interpreted as malicious and selfish. Ignorance about America is stronger than ever before among both intellectuals and common people. Everything Americans have done and everything they are planning to do is vicious. They are ill-mannered, imperialistic materialists. What is true in Europe is even more true in Asia and South America.

We are relying on the strange belief that our defeat of Japan has turned her into our ally and that the future bastion of American expansion in the Orient will be Japan. This can scarcely be true. Japanese culture is very old and wise. No man like Douglass MacArthur will easily deceive the Japanese. The insults which the United States long heaped on this land will not be forgotten in our day nor allayed by mild but strong control. Sometime Japan will be free again. She will regain her efficiency and power. She will never be servant of the West nor of the white race; but if she has learned her lesson well, she may yet join China and India in leadership

of that Asia which her outbreak in 1941 sparked into freedom and autonomy.

How then shall we lead the world? On one point more than others, our motives and acts are suspect; and that is, the treatment of minorities, especially Negroes and colored groups in our democracy. Everywhere in Europe, Asia, and Africa this crucial test of our profession is known. We can reply that race relations in this land have improved in the last fifty years; but their unsatisfactory condition today simply emphasizes the depth of our guilt in the last quarter of the nineteenth century.

Race relations have been bettered, but this has been in large part due to the unremitting efforts of Negroes themselves, who, for a generation have been the defenders of democracy in the United States, of which they themselves were so widely deprived. With all this and with the help and sympathy of thousands of liberal white Americans, North and South, the situation today is not good. The report of the American Jewish Congress and the National Association for the Advancement of Colored People in civil rights for 1949 says: "The darker side of the picture still remains dominant. Segregation continues virtually unbroken in Southern government. Throughout most of the country, racial discrimination governs the sale and lease of housing, while discrimination in employment and education still affects all minority groups. Finally, the international scandal of segregation in the nation's capital persists."

In the schools of the nation, textbooks still misrepresent the past. Slavery is depicted as a benevolent institution: "It was often a happy life for the slaves, they had no cares except to do their work well." Again: "On the whole, the slaves of the South were considerately treated." Or a new text, published in 1949, says: "Most of the slaves were happy, they did not want to be free."

The President in his campaign promised a program of civil rights for the Negroes in accord with the report of his Civil Rights Committee; he

49-2-163

repeats this promise regularly. Two years after this report not one of its major recommendations have been adopted. States have done something. Eight have laws outlawing race discrimination in employment and seventeen prohibit discrimination in schools; but forty other states have no such employment laws and seventeen make segregation in education compulsory. Eighteen leaders in American life, including John Dewey, Harry Emerson Fosdick, and John Haynes Holmes, declare that states having segregated school systems, expend an average of almost twice as much for the education of a white child as for a Negro child. The existence of segregated schools is in itself a blot on the American public school system. Today a map of discrimination in the United States shows that in most of the states, segregation and discrimination affecting voting, schools, marriage, or other rights, are in force. In some cases, race segregation has been broken down by facts, rather than theory: in the Battle of the Bulge Negro soldiers had to be used along with whites to beat back Von Runstedt.

In most cases Americans think that this condition is the rapidly passing result of former slavery, and affects but a small part of the nation; but this part amounts to nearly a tenth of the inhabitants and at least a quarter of the working class. Their condition affects the nation and particularly the laboring class. As low paid, ignorant and sick competitors they keep down production and wages and their condition increases the income and power of capital, just as slavery a century ago increased the political power of planters, Northern manufacturers and traders, and the British merchants.

These race and economic problems in the United States lead to curious paradoxes. It is, of course, natural that a white American of education and good income should be content with "the American way of life," and look on change or complaint as wrong, or even treasonable. But we buy gold feverishly from the slave labor of South Africa, from the bankrupt economy of

179 - 2 - 179

war-torn Europe. We run home and bury millions of this in the earth. It sounds like madness. It is madness. We live in a naked, hungry world. Our rich soil raises too much. We pay our farmers to raise less or destroy part of what they have raised. We store the rest in the earth. Our storage bins are already bursting at the seams.

This summer our carry-over of cotton will reach 2,000,000,000 bales. The carry-over of wheat will be 300,000,000 bushels; of corn 1,000,000,000 bushels. Already the Commodity Credit Corporation, which buys and stores supported products, is close to the limit of its borrowing power. The support program cost $600,000,000 in 1949. This year its cost will be much higher. Where will this insanity end?

Americans have many fine and outstanding qualities: their resourcefulness; their initiative; their keen common sense; their sympathy and generosity, and their sense of human equality. Much of this has been encouraged by the freedom of action and thought which they have always had, the vast resources of their country and the beckoning frontier which lasted so many years. But their very virtues have brought reactionary evils; their initiative has often been used to the hurt of others. They have not recognized as equals many millions of their fellows; their chance for gain has brought not only vast riches, but deep poverty, and their freedom has often degenerated into license and bad manners. And now, that the frontier has disappeared or been transformed from physical limits to mental problems, the old liberty must be curbed by social compulsion, leaving a realm of freedom only in thought and spirit. Just here (in thought and spirit) we are now frantically limiting freedom and compelling agreement ~~in thought~~ by threatening all with hunger, loss of status, or conformity.

It would seem that either Big Business will continue to take over control of the United States or the United States will nationalize the railroads, mines, forests, the telephone and telegraph facilities, the steel

49-2-165

and aluminum trusts, the Du Pont chemical empire, and Standard oil.

British capital cannot rescue India, and American capital will not, for it can get no guarantee of continued control. Chinese Communism can and will save India, if once it succeeds in saving itself. Then French and British West Africa will pour down the Nile with a new Middle East, rescue dead Egypt and turning back, absorb Kenya, the Rhodesias, the Congo, and South Africa. Mexico, South America and the West Indies, fighting Church and capital, will slowly follow this new world. With industry in state control and the state run for the welfare of all, there will emerge a new freedom in Art and Literature and a flowering of Science not dreamed of since the seventeenth century.

Either this, or Big Business will increase its control of American life and thought and, through America, will move towards control of the world. A third World War will inevitably ensue -- and Chaos.

Each morning now I look around at my country. I see its mountains and cities, its hills and homes, its rivers and cities, its men, women, and children. I sigh and ask: Where is the Land of my dreams, and of the dreams and faith of so many, many men? Where is the courage and high resolve, for a Land of the Free, a land of refuge for the weak and hunted, the friend of dissent and heresy, the hope of Peace on earth, Good Will towards men? The land that chained but freed the slave, gave votes to women and welcomed the poor and needy from the ends of the earth? What has happened to make her today the great warmonger of the world? Her battleships prowling in Saigon, her airplanes riding above Libau and patrolling the Seven Seas; her armies sitting in Germany, Japan, Greece, Korea, and Alaska?

We police the world and scan the stars. We are supermen, masters of everything and rulers of all, and yet, afraid of each other; searching, spying, questioning, burrowing into the minds and hearts of men. We fashion weapons madly and thrust them into the unwilling hands of English, French

49-2-166

and Italians and order them where and how to fight and keep fighting; these folks, with eyes still wet with tears for the dead and crazy and crippled. We shout defiance and murder to starving, naked and homeless people. We invent and manufacture death, and bury food and gold. We are howling wolves of hate, faring through the world on wire and telephone crying and crying again, Fight! Kill! Maim! Exterminate! The anti-Christ comes, the End of All. Our newspapers take up the tale, so that each morning begins poisoned with suspicion and hate. The magazines picture horror, dressed with fashions for Spring. We are afraid, afraid -- but of what -- of just what? No hostile armies are in miles of us; no ships or planes, save in the minds of idiots are near us. What frightens us? Why in God's name is this great, rich, secure nation literally scared to death?

The obvious answer is: Russia. Not the Russia of the czars; we endured that Russia, even with its indecent pageantry of royalty; its poverty and illiteracy; its pogroms against Jews. The Russia of the Revolution we regarded with pity and contempt. But not with fear. The Russia of Hitler we ignored as of no value for alliance and the sure and easy victims of the invincible Germany army, of god-like Nordics. We watched Soviet victory with disbelief and lend-lease, and then with dismay. We hastened to make alliance and gave generous praise to what General MacArthur called "the greatest military effort in history." And then, from 1945 until today all this has turned from distaste to frantic fear. Why?

There was a long day when no respectable man of brains and social standing referred to the French Revolution in any terms except of disdain, repulsion and disgust. Yet the time came when that Revolution was recognized as one of the great landmarks of human progress; naturally, with mistakes and excesses; but with vast preponderance of good. This may yet mark American attitude toward the Russian Revolution. But today as a nation we loath and fear it. The Archbishop of York reported after a visit to

49-2-167

America, that the dread of communism is more common and violent than it is in England, degenerating sometimes into an almost hysterical suspicion of those who hold left views."

A composer who had lived in this country for years was deported because his brother was a Communist. Shastokovich, the great Russian composer, was refused a hall on the campus of Yale University in which to give a concert. Picasso, one of the world's greatest painters, was refused a visa because as a Communist he wanted to plead for peace. The Reverend Hewlett Johnson, Dean of Canterbury, a man of Peace and Love, may not set foot in the United States. When Sidney Webb, the great British socialist died, American reviews made no mention of his monumental study of Russia. Repeated attacks have been made on Einstein, because of his mild socialism. A Read Admiral says, "If Einstein doesn't like Americanism or our nationalism, then he should go back where he came from and try Mr. Hitler again."

An article in Harper's Magazine for September, 1947, by Henry Steele Commager, Professor of History at Columbia University, depicts not only the intelligence of the average American teacher, but his courage and independence as well: "May 6, 1947, a Russian-born girl gave a talk to the students of the Western High School of Washington, D. C. She talked about Russia -- its school system, its public health program, the position of women, of the aged, of the workers, the farmers, and the professional classes -- and compared some American and Russian social institutions. The speech reprinted for us in The Congressional Record does not disclose a single disparagement of anything American, unless it is a quasi-humorous reference to the cost of having a baby and of dental treatment in this country. She said nothing that any normal person could find objectionable.

"Her speech, however, created a sensation. A few students walked out on it. Others improvised placards proclaiming their devotion to Americanism. Indignant mothers telephoned their protests. Newspapers took a strong

stand against the outrage. The District of Columbia Committee went into a huddle; there were demands for housecleaning in the whole school system, which was obviously shot through and through with Communism."

About 98 per cent of the daily reporting of news from Eastern Europe is unfavorable of them ; only in a few papers the truth may appear in a feature article of the Sunday edition, or in a special article on the editorial page. Erroneous facts about Russia are made and reiterated so that they are received as gospel. An air force general said at a Washington hearing, that all that was necessary to subdue Russia was to let Russian soldiers see the West: "There those boys would see a way of life, a freedom, a dignity of the individual that they never imagined before. It would be psychological warfare at its best. Stalin would lose control, and he could not discipline them. Russia doesn't like the system she is living under; and once the Red Army sees a better way of life, Stalin will never get it back under totalitarian control again. The Red Army will disintegrate in Europe."

Continual "factual" statements are made of Russian labor. That Russians work 81 hours to earn what Americans earn in ten. Any story unfavorable to Russia is printed in the United States. The effort to show communism as criminal is repeatedly printed.

But worse than this popular impression of the Soviet Union rife in America, is the acceptance of this picture by the leaders of thought in the United States.

Secretary of State, Dean Acheson, offered peace to the Soviet Union. He said: "Good and Evil can and do exist concurrently in the whole great realm of human life;" therefore, the United States, being Good, and the Soviet Union being Evil, can possibly live together. Thereupon he accuses Russia of keeping Germany, Japan and Austria from being "free countries;" of keeping in various nations by military force and under a regime which their people do not want; of refusing to assent to control of atomic weapons or to disarmament;

49-2-129

of subverting friendly government; of not treating diplomatic officials with respect; of lying to Russians about the United States and the world.

There has not been in modern history a more deliberately insulting "offer" of peace. No person who really wanted peace, would have couched an offer in such terms, even if he himself believed the accusations..

Frank Graham, an outstanding liberal, says: "Totalitarian tyranny must sometime begin to give way to human freedom now enslaved behind the Iron Curtain, but never dead within the human spirit."

In an editorial in The New York Times it is stated that the Russian "system has been able to win its victories by representing itself as a 'new and higher type of democracy,' which is to enrich the underprivileged at the expense of the possessing classes and thereby bring 'true' freedom to all. In actual practice it has only brought misery to those who have come under its sway -- and the reason it has done so is that its use of the word 'democracy' is as fraudulent as its promises.

"Under such a system there can be neither self-government nor freedom, but only the most rigid and stifling regimentation of all phases of a nation's life. To make this regimentation absolute, the Communist dictatorship openly espouses terror as the best means of mass control."

It carries its distaste even to refusing any restraint on Formosa to stop bombing of American vessels: "In actual practice the overwhelming force of wrathful American public opinion would prevent the United States from using its proud Navy to open up a supply line for the Chinese Communists. Common decency would prevent us from stooping so low."

Bertrand Russell tells Americans, that East of the Iron Curtain, "all that has made Europe valuable to mankind is extinct. And the Iron Curtain, alas, is capable of moving Westwards." He puts the issue of war or peace on the Russians and rests his hopes on civilization, military preparedness, and the Atlantic Pact.

Our representative in the United Nations said: "Confidence in Soviet pledges has been undermined by the experience of a past few years. To find cause for concern, it is not necessary to recall the friendship pact with Nazi Germany, or the Soviet non-aggression pact with Finland, Latvia, Estonia, and Lithuania. We need only look at the long, unhappy list of broken Soviet pledges that has grown since we have been engaged in the common effort to create the United Nations.

"The principle of unamimity of the five permanent members of the Security Council is based on the assumption that they will cooperate toward a common goal of peace. But the Soviet Union has twisted that principle into a weapon of obstruction and sabotage of world peace."

Enemies of Russia have every facility of publicity given them in our press and radio: "Any disgruntled journalist or diplomat or engineer, or so-called 'general'; any incompetent employee, any correspondent expelled from the Soviets for having lied about them, any dismissed incompetent technician, any scoundrel, swindler or careerist; any abominable or repugnant character; any international renegade, criminal, derelict or outcast; any adventurer or unsuccessful writer, any semi-socialist, anyone who has failed in everything is sure to reestablish his fortune by defaming the Soviet Union. The American press, the American magazines, the American editors, hold their arms wide open to them, and the American feebleminded public embraces them, receives them warmly and enthusiastically and generously displays its purse to them."

Even Henry A. Wallace, leader of the Progressive Party, declares both the United States and the Soviet Union are "brutes of force, both countries' policies rest on the doctrine of force. The Soviet Union uses one kind of force, the United States another. Both countries interfere in affairs of other nations. Both, certain of the righteousness of their cause, are plunging headlong toward mutual destruction."

49-2-171

Communism is continually described as a conspiracy of ruthless scoundrels; the Republicans say, "Communism is an international conspiracy aiming at world-wide dictatorship and the suppression of religious, political, and economic freedoms throughout the world. It corrupts ideals, corrodes basic religious teachings, destroys the fiber of man and denies the existence of God. It is imperative that the nations of the world develop new methods to offset this frontal attack on civilization."

Another widespread accusation is that Russia is a slave state, with all liberties curtailed and millions in labor concentration camps. The Vice President said on April 15, 1950, "The propagandists for this foe claim to be apostles of freedom, yet, in their so-called labor camps are more slaves than have been kept in bondage by any nation at any time in the history of the world. No citizen is free from searches and seizures of the secret police. Trial by unimagined tortures take the place of trials by jury. There is no freedom of expression, no freedom of the press, no freedom to worship in one's own way, no freedom of enterprise, no freedom to enjoy the profits of one's labors. Especially it is said there is no democracy or freedom of election." Communism is often described as deliberately false doctrine which takes advantage of poverty and distress with impossible promises.

At the end of the Second World War the rearmament of Germany was held to be the greatest threat to the peace of the world by General Marshall, Eisenhower, and others. Today, however, General Montgomery is preparing to create a Nazi army; the British Foreign Office believes this is inevitable. The United States Generals cannot say so publicly but privately they agree that a revived Germany army of some sort must be put into the field against Soviet Russia; and that our armed forces are in Germany to protect the West against the East.

A leading newspaper says in an editorial: "We cannot question the necessity for adequate security measures, if we cannot protect our country

against military aggression, then we may not long have any civil or economic rights to worry about. Disarmament is no solution; in a community of lambs, the wolf will rule."

Bernard M. Baruch called for a military establishment able to strike "immediately"; insure prompt retaliation and deter aggression and, also, to deal with possible civil war abroad. Secondly, a mobilization plan which will act swiftly with all our resources, men, money and material in case we or our allies are attacked. Third, organization of spies to provide information. Fourth, a general staff to formulate global strategy. There is a less definite but very general charge that the Russians are liars, murderers, and conspirators whose every word and act are suspect.

At the center of all Red-baiting today stands the charge that all Communism and all Communists are agents of a foreign power; so in 1928, it was said that Alfred E. Smith could not be President because he would be subservient to a foreign power; and finally, it is said that the Soviet Union is not democratic but totalitarian without real elections or any popular government. Such would seem to be the overwhelming opinion of leaders of American public opinion today.

But there are opposing views. The Women's International League for Peace and Freedom, said at the hearings on the Atlantic Pact: "During the past four years we have appropriated more than $50,000,000,000 for their use to build up a stock pile of atom bombs, maintain an air force to deliver the bombs in large quantity anywhere on the globe, maintain the largest military force of manpower in our peacetime history, finance peacetime military conscription in this country, and build military bases all over the world. No military machine is worth a nickel without an enemy, and the avowed enemy of our military leaders is communism and the spread of the Russian orbit. We contend that despite the almost unlimited resources at their disposal, our military leaders have failed to achieve their avowed

49-2-173

purpose, and for two basic reasons:

1. Communism, like democracy or Christianity, is an ideology against which no military machine or threat of force can be successfully pitted.

2. Economic poverty breeds communism, and by voting UNRRA out of existence, and by diverting our resources to enormous military preparations, including this even more conscienceless step of paying for the machines of mass murder for whole sections of war-gutted Europe, we are indirectly responsible for the very conditions in which communism is flourishing in the war-ravaged nations of the world...

   This is a wicked proposal, born of greed and self interest which will largely accrue to the conscienceless benefit of a handful of both American and European business interests. In the long run such temporary benefits will work to the advantage of such have-not regimes as Russia, China, and other Iron Curtain and similar backward countries of the world and give further strength to the contention of our military leaders -- that we should further tax our own economic and social resources for ever-increasing militarism."

When the President ordered the Atomic Energy Commission to make hydrogen bombs, Congress and the public praised the decision, but twelve leading atomic scientists said that few of the men who publicly urged the President to make this decision can realize its full import. No nation has the right to such a bomb no matter how righteous its cause. The bomb is no longer a weapon of war but a means of extermination of whole populations. Its use would be a betrayal of all standards of morality and of Christian civilization itself.

Russia's record on atomic armaments is morally stronger than America's. Russia has dropped no bomb, she has amassed no huge stockpile of bombs, she has not threatened other nations with the bomb, or used it in a form of pressure. Instead Soviet leaders have insisted that they will not use the bomb as a weapon of attack; and that they will build only enough bombs to protect their own nation.

The result of the fight which the United States is making against socialism and communism in defense of American business methods, is shown by the astonishing fact that this policy has forced us into alliance with nearly

49-2-44

every reactionary nation and movement on earth; even when this policy is against our wish and past traditions. We are upholding decadent and corrupt monarchy in Greece; land monopoly in Italy; we are helping fascist Turkey equip an army; we have welcomed the reactionary Shah of Iran; our trade is the chief support of Rhodesia and the Belgian Congo; we favor and help arm Pakistan over India; we have poured treasure and military aid into Nationalist China; and are now in military alliance with the puppet Bao Dai in French Indo-China; and have raised no finger to aid the peasants of Madagascar. We have defended the landlords of southern Korea and the present inept regime in the Philippines; we gave the Dutch more help in Indonesia than we gave the native government; in the West Indies, we have given more help to the dictator of the Dominican Republic than to Haiti; we have given Mexico little support, and more to the Argentine, and to Chile, and to other reactionary regimes in South America. Wherever in the world there is poverty, hunger, and distress fighting against vested interests and land monopoly, there is the United States, in nearly every case, aiding and abetting the oppressor.

This is not the real intention of America; it is not in accord with the genius of our institutions; it is the fatal paradox into which Big Business and industrial monopoly in this nation has landed us, camouflaged as a fight against World Evil.

So here we stand. The obvious next step for thinking people is Light, More Light. We must know the facts. What is Russia today and what are her plans? This reduces itself to answers to these questions:

1. How much personal freedom is there in the Union of Soviet Socialist Republics?

2. Is the Soviet Union giving its people real education?

3. Even if we grant that Russia has a successful system of popular education, is there any democracy in the Soviet government with popular election to office? Does not the one-party system show that this cannot be true?

49-2-175

4. Has the Soviet Union been able to carry on a planned socialist economy for Russia with State Control?

5. Is the Soviet Union a slave state?

6. Does the Soviet Union suppress religion?

7. Does the Soviet Union today represent an aggressive and expanding imperialism?

8. Is it true that the Soviet Union has driven out race prejudice?

9. How far does the Union of Soviet Socialist Republics restrict Art and Literature?

10. How free is Science in the Soviet Union?

Whether or not Russian Communism is a success is beside the point; the point is, are the ideals of human uplift as conceived by Karl Marx and Nicholai Lenin ideals which ought to be realized? If so, how can they best be realized? Even if Communism as tried in Russia had completely failed, it was a splendid effort, a magnificent vision. Moreover, if it has failed, and in so far as it has not reached complete success, the reason is crystal clear: it is the long and contemptible effort of the civilized world to prevent its success by every possible means of slander, sabotage, and war.

Ruling classes have always used the tactics of smearing against those who threaten their status. They accuse the group of all manner of infamies and crime and treat as criminals all who can be directly or indirectly associated with it. This tactic was widely used against the Christians under the Roman Empire. Nero, it is said, was induced to denounce Christians as the authors of the burning of Rome "to perpetuate the popular feeling, for none others were so detested for their strange and mischievous superstitions or so generally held guilty of the most abominable crimes, of the crime, indeed of hatred toward the whole human race." The same tactics were used against the French and American revolutions.

It will be the aim of the next chapter on Russia to answer these ten crucial questions.

CHAPTER VII

THE UNION OF SOVIET SOCIALIST REPUBLICS, 1950

To me, sitting in my office, in 1949, came the Councillor of the Soviet Embassy and said: "We hold a Peace Congress in Moscow, August 25; we are inviting you and a half dozen other Americans to attend." I did not hesitate. I had just returned from the Paris World Peace Congress in May, but this chance to make a third visit to the Soviets seemed the opportunity of a lifetime. I left New York at noon, August 20, had breakfast in Scotland, slept in Stockholm and next night, Monday the 22nd, landed in Moscow, feeling slightly like something out of the Arabian Nights.

During 1949, I attended three Peace Congresses and strongly desired to attend the fourth in Mexico. The Congress in New York was large and influential. It tried to arouse America against war. Itwas notable for the studied misrepresentation of its aims by the Federal Government and and the press. The Paris World Congress was the greatest of modern times and rallied the world for a peace offensive.

The Moscow Congress was different; not so large as the others and more national than international, it was designed to brign the attention of the Soviet Union and its allies, to the fact that it is not enough not to want war; it must be clear to all that the threat of war must be actively opposed.

For this purpose all Russia sent 1000 delegates to Moscow, August, 25 to 27, 1949, and they were joined by delegations from some 14 foreign lands. Most of these were friendly neighbors, like Poland, Czechoslovakia, Rumania, Bulgaria, Albania; from the borderland; from Austria and East and West Germany; but none from Yugoslavia. From the western lands, came

49-2-174

2

eight from Britain including the Dean of Canterbury and Professor Bernal; from France came four with La Fitte the Secretary of the World Peace Congress and D'Arbussier the African; from Italy came Nenni and seven others; from the United States, only myself, although several others had been especially invited.

The first session of the All Union Conference of the Partisans of Peace took place Thursday, August 25, at 5 p.m. in the Hall of Columns of The Trade Union Headquarters. It had a beautiful setting: a lofty white hall, flanked by 28 white corinthian columns of marble, with crimson curtains and 54 brilliant chandeliers; a huge bank of flowers on the rostrum under pictures of Lenin and Stalin. On the presidium were Fadeev, Shostachovich, the Dean of Canterbury, Arenburg and a host of Soviet officials, like the head of The Trade Unions, the head of the International Women's Organization, the head of the Collective Farms of the Ukraine, and a high official from Rumania.

The audience had representatives from every province of Russia and all classes, from miners and peasants to professors and professional men. It was no gathering of ragtag, but of intelligent, well-dressed men and women. After preliminaries of electing committees, etc, the speaking began. There were seven speakers, the first day, lasting until 10:30 at night. All the speakers were Russian save two, a Rumanian and a Britisher. Most of the speakers were hortatory lauding the Soveits, scorning capitalism and blaming Britain and America for warmongering. They spared no accusations nor epithets.

The center of the theme was Russia and before us the Soviet Republics were ranged in microcosm; every corner was represented from White Russia to the Ukraine; the far-off Uzbeks, the Turkmen, Kirghis, and Tashkent;

north were the Karelians, neighbors of the Finns; and all the cities, Leningrad, Kiev, Gorki, Odessa, and other. There were notables in the audience and on the platform: Gerhardt Eisler from Berlin; Wayland Rodd, an American Negro artist now resident in Russia; leading women from Poland, Britain, Italy and Czechoslovakia.

That crowd was a sight to make one bend forward and stare. There wa nothing bizarre or especially strange about it. These were ordinary human folk, dressed up but not conspicuously; quiet but enthusiastic. One would rate them as middle class, with artisans, miners, peasants, workers, intellectuals and professional men; and a large proportion of well dressed, but not over dressed women. There was no display of wealth--I saw one white fur jacket and many earrings. There was no poverty. It was a literate throng, which had read considerably and now bought many books in the anterooms. All listened with an absorbed intentness which put me to shame.

Three days, in double sessions of five or more hours each, we sat and heard talks. There was no let-up, no entertainment and only one or two, ten minute rest intervals during ~~the~~ each day. Ear phones helped us foreigners, but watching the faces ~~were~~ was more revealing. This was no crowd of cringing slaves nor fearful followers of command. Here were eager and sincere workers and inquirers. They had deep convictions and wanted more information.

It is naturally hard to indicate the lines of talk, so much was said in 22 hours. All was in open session; there were no panels. The seats ~~of~~ for the audience and presidum were never bare and usually full.

There were learned talks from heads of academies, scientists, leaders of Collective farms, labor unions and local leaders. Most of the talks were hortatory and inspirational but not effusive nor loudly oratorical. They emphasized the theme that "Anglo-American Imperialism" was intent on

49-3-179

fomenting war. Britain and the United States came in for most blame; France was less often mentioned; Holland now and then, and Belgium never. Faith in socialism and the Soviets were dominant themes and Stalin's name always was cheeredto the echo. They spared no phrases nor inuendos in attacking the Marshall Plan and the Atlantic Pact.

In addition to this and among these periods, much information and indications of attitude came. A leader of Ukrainian Collective farms said that the Ukraine had lost 45 million rubles of property and nearly all their stock during the last war, but now was recovered in part and was making an annual profit of two million rubles. He said thay wanted neither war nor conquest; only peace to work out their plans. A Rumanian gave a picture of recovery and told of the amancipation of his country by the help and example of Russia. He told of farmers and city folk warking together; of scientists and artists; and pled for peace that this work might go on. A peasant from Uzbek thanked the Soviets for rescuing his land from slavery: in nine years, schools had increased 60 fold and in the country districts 300 fold. He noted the decline of superstition. Science and drama had been encouraged. Georgia (absit omen!) reported the integration of workers, intellectuals and artists. They now had electric trams, schools and an academy of science.

Albania reported schools, factories and railroads, "thanks to the Soviets." An Austrian woman said: "Thousands of Austrians want peace and friendship with the Soviets". The largest cultural organization in Austria is the one for Soviet Friendship. The Karelian reported reaction and propaganda from Finland to promote war. Western Germany demanded unity and independence for Germany and declared that capitalism failed in social aims.

5

In Tadjik peasants used to be beaten for non-payment of taxes. Now collective farms concentrate on cotton and they have just erected a Palace of Culture costing five million rubles. The people are far better off than neighboring India and Afghanistan.

In Latvia, 70 per cent of the investment before the last war was foreign. The terrible condition of Turkomania before the revolution was pictured by a dark broad-faced Oriental, as contrasted with the progress now. Khirgis reported: "We have recovered our pre-war status in Agriculture." D'Arbussier spoke of Africa and the French colonies and was enthusiastically applauded.

The schools in Moldavia were increasing and as one woman said: "We workers strive to make all things which meet the vital needs of men." Others declared: "women have become a great and creative force in the Soviets."

All this report of progress was bound up with reference to the hurt and uselessness of war. This rank and file of Russians asked only peace and time to bind the wounds and push forward to a social progress in which they expressed boundless faith. They did not want, they could not believe in war. As a Polish woman of amazonian proportions declared, leaning over the rostrom with tears in her eyes, "Every drop of blood in my heart shouts Never again War." When later I saw Warsaw, I knew what she meant.

There were bitter references to the last war; a Hungarian reported that his land had lost more men in the last war than the United States and England combined. Russian women told how they had done men's work during the war; how they had fought beside the soldiers and lost husbands, sweethearts, and sons. They appealed to the women of the world to stop war.

Hewlett Johnson, Dean of Canterbury, pointed out that Russia had never started a war but had been the continuous victim. He told of the

49-2-181

growing British Peace Movement and referred to his successful lecture tour in the United States, where audiences ranging from two to five thousand crowded to hear him. He didnot probably realize that news of this was apparently not handled by the Associated Press and reached few of the citizens of this country. His Christmas broadcast done in California by special request was given no wide hook-up. He said Japan was not conquered by the Atom bomb, so much as by fear of Russia.

Continually the delegates said, "We are against war; we want no war;" but added: "We are not afraid!" Both La Fitte and Hewlett Johnson said "Hail to the Conquerors of Stalingrad." One realized what that great victory had meant to Britain and France.

There was little official entertainment. The foreign delegates viewed the Kremlin on Monday. We were told that an American Senator on seeing the extravagance of Czarist wealth and power, remarked: "No wonder they had a revolution!" We were all invited to a Goethe celebration where the influence of the French Revolution on him was stressed and the need for Russian and German friendship despite the last war.

The audience was not there for entertainment but to hear a very long discourse on the poet and one short one from a German woman. She stressed the influence of the French Revolution on Goethe and asked for friendship between Germany and Russia, despite what Russia had suffered from Germany. A concert of Russian, German and French classical music followed for an hour. I sat in a box with a Chinese lady and other foreigners; we were plentifully photographed.

The closing reception was most enjoyable. The restaurant was vast, with three or more great halls. The occasion informal but crowded; the food was abundant and good; most stood and ate but special guests were

49-2-28

seated and waited upon. We had wines and champagne, caviar and watermelon; sprightly conversation and toasts, even with translation; I saw D'Arbussier having a jolly time. My interpreter danced with the leading ballerina. I stayed from 9:30 to 11:30 p.m.

I spent ten days in Moscow and sensed the substance and reality of what we call the Soviet Republics beginning to take definite form. I do not yet know this land in any scientific sense of the word. But in the three visits in 23 years I have a sort of spectroscopic roundness of conception and sense of time which replaces figures. First as to my impression of the city which has today perhaps sevenmillion people living in an area of 2715 square miles.

Today I had a long ride on the Moscow sybway, six or eight stations and one transfer. It is the most beautiful in the world: that stations are very large and decorated in variegated marbles; each station with a different pattern so one can tell his station by the appearance without reading the name. ~~Escalators with polished wood are at each station.~~ Trains are frequent, running smoothly and with seats cushioned and upholstered in real leather. Last New Year, six new stations were opened, adding five miles to the system and forming the first section of the ring which will encircle the city. These "Palaces of the People" began with the Kursk station with red Georgian marble walls, huge columns of gray marble and mural paintings. Most of the stations have neon lights in special glass torchieres, telephone booths and rapid movement escalators. There is some crowding, standing and pushing in loading and unloading, probably bad at rush hour. There are no expresses and no advertisements!

Strangers who have heard about this subway but have not seen it, must be a bit skeptical; because after all it is not merely a means of

49-2-183

transportation. It is a great accomplishment which the people gave themselves; working folk gave voluntary labor ~~upon this~~ and put into it all the skill of which they were capable. They have time to give this labor because their hours of work leavesthem leisure. ~~So that here they put in voluntary work.~~ The result is a thing of sheer beauty, spaciousness with big curved domes and gracious pillars, with difference and individuality in decoration; with the evident idea of making something which will not only serve but please, and which will be a monument to the accomplishment of a free labor state.

I am on Gorki Street, at the corner of the vast Manezhnaya Square. ~~with~~ The Red Square ~~square~~ is not more than a block away, with the Kremlin and the twirled towers of old St. Basil and the dark red bulk of Lenin's tomb where he lies life-like forever. Opposite is a new, tall office building and katercornered the new Hotel Moscow. The street below me is one of the broadest in the world. Gorki street which in 1926 was a conventional narrow busy street is now about 140 feet wide with side walks 20 feet wide at either side. There is an unused space ~~with~~ of 25 feet along the center, with no traffic, where the traffic officers pace. The width of the street and the auto trafffic which is considerable but of course not nearly that of New York or London, makes crossing difficult; One cannot make ~~this~~ it on the greenlight and must usually stop in the middle. Right turns on red are allowed, but no left turns.

This boulevard runs from the vast Square a distance of ten or more miles. Another boulevard crosses it at the Square and there are a half dozen such wide boulevards in various parts of the city. These streets are being planted with young trees and are paved with asphalt. Moscow has today probably the longest milage of broad boulevards of any city in the world. Since the government owns all the land, city planning is easy and is hindered by not vast cost of vested legal rights. The whole edifice of real

4-8-47

9

estate values is non-existent. Henry George must lie quiet and happy in his grave at this development. The rebuilding of Moscow has been rushed and has its raw spots; behind the impressive new facades one sees here and there old and ugly Moscow; falling court-yards and stuffy dwellings; but the result of re-birth is impressive. Sometimes the new building material is not good, and in some cases the planning has run ahead of actual development; as when the first story of some new housing units, left for stores, are not so occupied but have families living behind the wide, curtained windows.

The folk are all clean, but with little jewelry or ornaments. Roughly I should describe a Moscow crowd as varying from the well-to-do to the poor with a preponderance of the comfortable. On the street one sees no idle nor rich, no elements of luxury and display and ostentation. It is a world of busy working people. There is no loitering nor loafing. Crowds go about their business briskly, stores are crowded, especially food stores but the crowd hurries. The integration of classes is noticable. Every effort is evidently being made to make the artisan and handworker the social equal of the white collar worker, the professional man, the teacher, the civil servant. Tipping is rare. Incomes are not graded so as to exalt the scientist and professional man. The Deputy Chief of a Bureau who interpreted for me said his income was less that that of many artisans. But aside from income, the expense is less: my interpreter pays less than five per cent of his wage in taxes; his rent (for a bachelor apartment) is about 30 rubles a month. His education through the university was paid for by the State and he has no fear for old age, unemployment or sickness. He goes to the Caucasus for vacations--the Florida of Russia.

Is there left incentive for good, hard continuous work? There are

49-2-185

rewards and medals for laborers and professional men and they are worn with pride; there is promotion with increased income and public honor.

The people look healthy; they are not handsome but sturdy and well built; the women are not pretty, but well-made and upstanding. All are frank and cordial. They push in crowds, but are inherently courteous--twice in one long ride in the subway, young women gave me a seat, to my ill-concealed astonishment. As I noticed in 1928, the crowds filled the museums and art galleries. The crowd before some of the best pictures made viewing them difficult.

There is much less drinking of alcohol and decreased smoking, compared with 1926. Hoodlums and impudent children are not in evidence. Cinemas and concerts are well-attended. I saw no evidence of dives, gambling and nightclubs, but I could not make enough investigation of this aspect of life to be sure. There was no evidence on the streets of prostitution.

A colored woman from New York visited Moscow last December; she said that the stores were crowded. Luxuries were high priced, but necessities were reasonable; beautiful apartment houses were going up with low rents; the people were sensibly and comfortably dressed; "you don't see Moscow kids loitering on the streets; school and studies, libraries and social games keep them occupied." The theatres are crowded and clean; and finally: "no," she said, "I was impressed by the equal treatment, the respect shown to people of different nationalities. Never for a minute was I made to feel by anyone, by look or action, that I wasn't their equal." And she added, "I wasn't excluded from a single place in Moscow either."

Russia before the revolution was a priest-ridden land. Moscow was dotted with the domes of churches, looking like a sea with islands of gold

49-2-186

as late as 1926; shrines to collect copecks and forgive sin were ~~everywhere~~ common; and superstition covered the land like a blight. The Soviet State seized this sickness with a firm and ruthless hand. Today I have not seen a church in Moscow. Of course, there are some, but a comparative few. The average Moscowite is as unmoved by religion as the average New Yorker or Londoner. Probably the church is still influential among peasants but nothing like before. Lenin's word is still on his museum, formerly the city hall; "Religion is the opium of the people;" but no one notes it. It is dusty and lost. My interpreter, a young man of 28, has never heard of it. Within the Kremlin, like museum pieces, gleam the dome of churches and cathedrals; St. Basil twists without the main gate. Crowds still visit Lenin's tomb.

Americans and Western Europeans are unused to the deference and almost worship rendered Stalin: his picture appears everywhere, his statue in marble and bronze; and his name provokes great applause. It must be remembered that the reasons for this are partly cultural and partly personal. To illustrate the cultural element: I noticed with interest that when the speakers at the Congress were applauded, they themselves also clapped vigorously. This is a Russian way of thanking the audience for its appreciation. It certainly gives the victim of prolonged applause something to do beside looking silly; but it strikes a Westerner as decidedly odd.

In some similar way, the Russians for generations have paid high tribute to their rulers; the "little White Czar" was almost God and provoked not simply applause but obedience and open devotion. Today Russians cannot give less tribute to the leaders raised to power by the people; they even exaggerate their loyalty in this way; it is a tribute different in degree but not in kind to the British "God save the King." Then too,

46-2-184

this present ruler of Russia is a fellow citizen, they like to call him, not Marshal, nor Chief Executive, but "Comrade." Beyond this is the fact that Joseph Stalin is a great man who has done a hard and successful job. He has steered the nation since Lenin's premature death, putting down treason, driving out invaders, formulating economic plans and finally defending his country in the greatest war of the age; he has made the world bow before the might of Russia and yield respect to her as never before in history. He has made peace possible between Socialist Russia and the Western World. As a man and statesman he deserves the high respect of his country and of the world.

On my last nightsin Moscow, I saw Offenbach's "Fair Helen" a comedy based on the Paris and Helen story. It was well-acted in a garden theatre. The next night, I went to the golden Bolshoi theater with its six graat balconies and crimson trimings. I saw "Swan Lake" a ballet by Tchaikowsky beautifully danced, with bewitching music and costuming, and lovely scenery. I noted the beautiful movements of the dances with marked absence of mechanical precision. It was the most delicately wrought ballet I have ever seen, by the best set of performers in the World. The mechanical puppets of Radio City are ghastly compared with the Bolshoi.

The chance to rebuild and improve cities is notable. Henry George, a half century ago, demanded what Russia now practises: confiscation of all unearned increment from land. Take "real estate"; the "Earth is the Lord's" but the real estate owner in New York and London and the speculator has taken charge; he uses a piece of land as if he had made it. When persons needing this land, crowd in upon it and give it increased value, this social value goes to the owner, until in a city like New York most of the counted "Wealth" is this legal ownership of the soil by a few persons. There can

381 - 2 - 44

be but limited city planning -- the costs are too fantastic. London, planned centuries since and still struggling with its cowpaths, may be bombed out of recognition; but no real replanning can ensue, because of the feudal exactions of the "owners" of London soil. The Soviets simply recognize no such titles, and no such wealth. They rebuilt Moscow and pay no tribute to private landowners.

The Collective Farm is a tremendous invention and may revolutionize the modern world. It brings the machine age to agriculture; it raises the farmer to economic equality with the trader and consumer. It enables modern conveniences: schools, electricity, automobiles, and theaters to penetrate the country districts and raises them from neglected, exploited slums to abodes of civilized folk. In America, the collective farm is a rich monopoly with impoverished tenant farmers, who must, often, be supported by the state. The profits go to the owners and they collect, also, federal aid. The representatives of the Soviet collective farms were among the most convincing and realistic delegates to the Peace Congress.

As I look back upon those ten days in Russia, seeing glimpses of the countryside with harvested fields, and the huddled villages; with passing glimpses of great cities like Leningrad and Moscow and lesser ~~villages~~ cities; I seem to have brought away with me a feeling of the confidence and serenity of this land. There is a calmness today that contrasts with the excitement and even apprehension of other years.

Here is a land which has found itself and believes in its destiny. It is no longer performing for a world audience and asking anxiously for approval. It is looking inward upon itself and what it sees seems good. There is no evidence of fear or cringing and, on the other hand, no boasting. There are bookstores, daily papers, parks are every where being built, and ~~being~~ widened. These are a contented folk.

It was fitting that on the way from the Soviet Union, I should catch

49-2-189

a brief glimpse of other lands behind the curtain which has been called "Iron." I saw Prague, which I remember as a student in the late nineteenth century. There was still the great hill and castle and the bronze statues; but there was also a bigger accomplishment in the midst of difficult problems which made the city not perhaps as beautiful, or with the same sort of memories of religious wars, that I caught in other years; but with a sense of hope and accomplishment and ~~of~~ organization ~~for show.~~ But most startling was my sight of Warsaw and of other parts of Poland. I visited Poland once as the guest of Stanislaus Von Estreicher, when his father was librarian of the University of Cracow. I remember him saying to me, "You do not know what the race problem is; you should know what has happened to Poland under the Germans."

I saw Warsaw in 1936; but at midnight, with but shadows and a confused sense of a great city. I see it again on the clear, sunny morning of September 3, 1949; I look down on its ruins. I come to the airport and am met by two officials of the Cultus ministry and the Peace society, whose guest I am. Their English is labored and their French is little better; but we are delighted in finding a common language in German. I am driven to a hotel, the Bristol. It has been but partially damaged, although in need of repairs. My room with bath has a vast window facing the city, but to my distress, there are no curtains for it, making the room a flood of light; frantic phoning in French brings a change to a nice fourth floor room, looking on a large court. Today, Sunday the fourth of September, we rode over the city.

No African barbarian, having heard of civilization in Europe and the perfect religion of Christianity could believe that civilized men could do to a city of 1,000,000 folk what Germany did to Warsaw; the tale seems unbelievable; the fiends poured bombs from the air on everything; they they trained their artillery and machine guns on wall, tower, and street; finally, the soldiers lugged cans of gasoline from house to house and put

49-2-190.

all that stood to flame.

I saw the Ghetto where the desperate Jews broke out into last revolt. It was literally reduced to ashes. Around it now apartment houses begin to rise and in its center stands the gray statue done by an American Jewish sculptor, a monument to a struggling group of those who died.

Much of the city was reduced to rubble; but everywhere stood sightless, empty houses and buildings, destroyed churches and monuments; and over all the memories of the scream of the dying and silence of the dead. Today, amid the remains of this incredible ruthlessness, rises the new city; flowers in beds and windows; trees and grass in parks, cleaned brick in pile after pile; and new buildings rising everywhere; every bridge over the Vistula was destroyed and rebuilt, and every museum was raped of its art treasures and only the smaller part have been found and returned.

This is a city where a man can weep and cry for sheer joy in the possibilities of the human soul. The landlords who raped Poland for centuries are today on the run; some are in America, preaching war! The land has been divided among the peasants, perhaps the most oppressed peasants of all Europe, except those of Russia at the time of the czars. I remember back in 1893, in another part of Poland, seeing them groveling like animals on their knees in a Catholic Church. Their emancipation has begun; already there are cooperative farms.

At dinner I joined a labor leader and Professor Lange, once Polish Ambassador in America and a member of the Security Council of the United Nations. Lange has taught at the Universities of California, Michigan, and Chicago. He has spoken at Howard and taught John Hope II. He told me of Polish land: in 1943, Poland dispossessed all landholders with more than fifty hectares (those with 100 in the Western section) without compensation, but pensions for themselves and wives. The fifty hectares must be selected outside their former holdings. Most of the aristocrats moved to England and

49-2-14

America. The middle class became kulak leaders in their districts -- Michiolaczyck was one and the right reaction gathered about him. Then voluntary cooperative farming began, perhaps one per cent. Next, collective farming ~~like~~ as in Russia will be introduced, as machinery and fertilizer become available, under the Six Year Industrialization program. Now peasants are taken on excursions to view Russian collectives. ~~The church retained and even increased its landholdings.~~

Last night, my young guide, his little wife, and a Czechoslovakian friend, went to a folk theater; it was based on folk ways, with authentic costumes, songs, and dances; there was the courting, the request for the bride, the engagement and the wedding; it was interesting, simple and well done. Today, we went to the bank and went through endless ceremony and signatures to get dollars changed into zloties at the rate of 400 to one. Then to a museum with a good ~~small~~ Egyptian selection. The Germans caroused there and stole all the art; only a part of it has been recovered. We walked through a street which was rebuilding. It had been literally swept out of existence but now is being reconstructed from photographs.

When I said to a young friend of mine, "I have just returned from Russia," she said, "Did they handcuff you?" She was not joking entirely; she was expressing facetiously the idea rife in America that Russia is a "slave state" in contrast to free America. Others bewail the absence of Democracy, the supression of religion, and the general poverty and misery of the people.

Let me, therefore, consider consecutively certain questions which have arisen in American minds concerning the Soviet Union.

1. How much personal freedom is there in the Union of Soviet Socialist Republics? There is not in Russia so much freedom of action, either in theory or practice as in the United States. Our theory of freedom is that a man should have the right to do anything he wishes to do, anytime, anywhere; in practice this is limited by the right of others to act; and always by general

49-2-192

considerations of peace and morality. But it is also distinctly limited today by the necessity of earning a living at the job which is open and under the conditions of work prevailing. The old freedom of throwing up jobs, changing homes, and trying different vocations at will is not gone but distinctly going. American life is limited by income, and income depends on the opportunity to work, which is also limited.

In the Soviets, the theory of freedom is discipline for the public good; and the public good is conceived of as involving work, production of goods, or the rendering of useful service. Morality is looked on as prohibiting profit from a wage contract involving another's labor; prohibiting neglect of children, and prohibiting of idleness. The state guarantees a job with a living wage, but the choice of a job is limited. This leaves considerable difference between Russia and America in the conception of freedom, but not absolute difference.

For instance, loafing without means of support would lead to arrest in Russia; living on unearned private income would lead to heavy taxation and severe public disapproval. Poor work on the job or neglect would lead to reprimand and possible arrest. No one would be permitted to build an elaborate house, exceeding his needs or that of his family; and when the law says not to park a car or not to turn left, the law means what it says. With us, laws are disregarded, work is regarded as a private matter, and loafing the right of anyone who can manage to live that way.

The extreme of these theories are licen e in America and regimentation in the Soviets. Nevertheless, in the United States, we know there is too much license and lawlessness and we are fighting against this; and in the Soviet Union, the average man is not a slave but submits to discipline willingly because he sees its results in regular work, with no fear of old age, with his children in school and a vacation with pay every year. Certain kinds of undisciplined persons recoil at the picture of Russian discipline

49-2-193

for the public good; certain Americans fear the license and anarchy of America.

2. Is the Soviet Union giving its people read education? If the planning for a nation's welfare is a matter of autocratic power from above, we have a totalitarian state, which in the end will be almost inevitably conducted for the benefit of an aristocracy or a plutocracy or a junta of capable but unmoral conspirators like the Nazis; this is the picture of the Soviets which has been painted in the United States. The facts in Russia do not support this thesis.

First of all, no oligarchy educates or tries to educate the people. No educated mass of people can long be kept in slavery, serfdom or poverty. This is the reason that the Southern part of the United States has always opposed the education of Negroes; and why Great Britain today even under a labor government does not give free education to the masses. On the other hand, Russia has today, without doubt, the best system of popular education in the world. Its preeminence in comparison with other lands is in part due to the collapse of education in Germany, the poverty of England and France, and the neglect of the United States. But absolutely, the effort at education in the Soviets is the most outstanding in human history.

The Constitution of the Soviet Union declares: "The right of every citizen of the U.S.S.R. to education." In 1941, there were 1,200,000 teachers; the war reduced these to 775,000, and 84,000 schools and libraries were destroyed. But in 1949, there were 1,225,000 teachers, compared with 900,000 in the United States and 34,000,000 children in primary and secondary schools, compared with 21,000,000 in our schools; there were 5,000,000 pupils in kindergarten and millions in nursery schools.

Before the war, the number of students attending higher schools in the Soviet Union exceeded that in any of twenty-two countries of Europe, including Britain, France, Germany and Italy. At present, there are over 800 higher institutions of learning in the Soviet Union, with an enrollment of 1,000,000

students. Moscow alone has more university and college students than any country in Europe. With each passing year the Soviet State allocates ever-increasing funds for cultural needs. Under the U.S.S.R. state budget for 1949, over 119,000,000 rubles were allocated for social-cultural measures. This is 12.9 per cent higher than the allocations of the previous year and fifteen times as much as the Czarist government ever assigned to the needs of education. In the U.S.S.R. budget and in those of the various republics, expenditures for culture and education constitute basic items. For instance in 1949, they come to 71 per cent of the budget of the Russian Soviet Federated Socialist Republic; 66 per cent of the budget of the Ukrainian Republic, and so on. Pre-revolutionary public libraries in Russia had only 640 books per 10,000 residents, while in 1938, there were 8,160 books for each 10,000 persons.

The Government budget for education rose from 12,000,000 rubles in 1943 to 60,000,000,000 in 1950, or 26 per cent of the total budget. All schools have clubs for sports, arts, handicrafts and hobbies.

Adult education is carried on so as to provide ~~education for all, equivalent to~~ for all, the equivalent of secondary education. The goal is eventually to make higher education universal. Technical education is carried on in twenty different types of institutes with 1,000 to 4,000 students each. There are widely distributed lecture courses and 94,000 workers clubs with "palaces of culture." Primary and secondary education for children are free and compulsory. By a series of examinations the road to higher education is open to all, while tuition is charged, the amount is small and scholarships usual.

In Moscow University, the fee is 400 rubles a year; it is less in other schools. Actually, not many have to pay. Those who get excellent marks are exempt. Veterans and their children and orphans are exempt. For those who need it, a room can be secured in the dormitory with meals free of charge.

49-3-195

In addition, everyone making "good progress" gets a stipend, beginning at 250 rubles a month; and ~~it~~ the is increased for the better students.

Last January, 1949, I attended an "off the record" meeting addressed by the president of a leading American university. He told us, incidentally, that on his one trip to Moscow he was unable to get information about entrance examinations to Soviet universities; on return, he learned the Communist Party had forbidden all examinations!

In reply to his assertion, Jessica Smith said," It is simply impossible that a higher education official could have said that there were not examinations -- unless he was referring simply to the fact that those students who graduate from high schools with excellent marks and receive excellent marks in their final exams are admitted to higher educational institutions without further examinations, which is the case in this country for students receiving high average.".

"The early days of the Soviet Republic were a period of extensive experimentation in education. They widely used what has been known in the United States as "progressive education," the complex, or project system without regular classes, and in those days marks and examinations were abolished, the pupils were given an extraordinary amount of initiative, but the teachers had little authority.

When experience showed that these methods did not work, that while they resulted in a ~~tremendous~~ creative initiative, the basic formal tools of learning that all human beings require were sadly lacking, a change was made. While the best features of the former methods were retained (as for instance combining practical with ~~the~~ theoretical work, linking up ~~up~~ education closely with life itself, independent research, and so on), regular, formal classes were reestablished, and marks and examinations introduced again. This happened by a special Government decree back in 1932, and the system of marks and examinations has been continued to this day.

49-2-196

3. Even if we grant that Russia has a successful system of popular education, is there any democracy in Soviet Government with popular election to office? Does not the one-party system show that this cannot be true? It is a mistake to think democracy has been throttled in the Soviet Republics. The Soviet is the cell of democracy just as the town meeting was the nucleus of New England democracy. The people come together to talk, propose, argue, and to decide; to elect a delegate to a higher Soviet which in turn elects to one still higher and so on to the Supreme Soviet. Here is pure and effective democracy, such as has almost disappeared from the United States.

Then comes a difference. At the top of authority, conformity is imposed, but it has two guides: the overall plan of a socialist state as laid down by Lenin and developed by Stalin and others, and confirmed by the party councils; and in addition to this, the wish and will of the people are known from the free discussion of the Soviets. Only in crisis is this will ignored, as in the case of the peasants and their farms. Like all peasants the Russian mujik was ignorant, superstitiously religious, custom-bound, rooted to his little farm-strip and his home. He wanted no collectivism, no cooperation, no compulsion as to crops and methods. I remember the peasant cabman pointing out a tractor to me in 1926, in the suburbs of Moscow: "They want to introduce contraptions like that," he said, "they'll never do it." Peasant public opinion, especially that of the richer and most influential peasants never would have done it, but power from the top down compelled them and thus introduced the Collective farm, the greatest step forward in agriculture for a thousand years.

What would happen if the Supreme Soviet was wrong and made unwise or fatal decisions? That is a grave question and unanswerable; but after all, what happens if Congress or Parliament go wrong? Democratic public opinion armed with the mass of knowledge of the people change this in time. I see

49-2-197

no reason why this would not happen in Russia as the schools increase and as the socialistic state succeeds. It would, of course, be a longer process than with us or in England, at least in theory; since it would involve change in the fundamentals of Russian socialism as now defined. But that socialism has changed and grown since 1917. Doubtless, it will continue to change, albeit slowly, and, indeed, fundamental changes in "free enterprise" have not occurred overnight.

There is one puzzling phenomenon to those used to the British party system. We think there is something sacred and essentially democratic about two political parties. Russia thinks that in a socialistic state there is but one party; decisions are made before voting for officials; in the vote for officids persons are chosen to carry out decisions, not to make them. Therefore, one party and one ticket is logical. We may disagree with this, but it has logic. And the American elect on of 1948 shows how little effect the election may have on decisions.

The Soviet Union insists that outside the question of division of income between classes there are no problems which naturally divide peoples into parties. There used to be; there still are in backward lands. But in modern nations it is not a question of party difference as to whether man should eat or wear clothes or have homes. The details as to how this shall be accomplished or how quickly or in what quantity, must be thought out and debated; and the character of the engineers and managers must be continuously inquired into. But above and beyond details, there is but one opinion, one party--to get these things done. Consider the party differences between Republicans and Democrats; Laborites and Conservatives; Socialists and MRP? They cannot even be stated, much less put in action, outside the question as to who is to control the national income. The Soviets insist that since this basic question has been settled in Russia there is and need be at present but one party.

261 - 2 - 64

With all of our talk about democracy, there is not today a single nation in the world, which attempts to practice democratic government without modifications and restraints. In the United States, our election of the president, appointment of judges, representation in the Senate and inequality of electoral districts show the legal restraints on democracy; while extralegally but by common consent are the disfranchisement of Negroes and the poor, the use of money in elections, and the well-paid lobbyists of Big Business in our legislatures, not to mention the press and periodical monopoly. It is with the greatest difficulty that the American electorate gets a chance to express its mind or receive the truth upon which to make up its mind; or secure sanctions by which it may make its legislators carry out the popular will. In both Great Britain and France, and in pre-war Germany and Italy, and certainly in the United States, the will of the people has long been thwarted by wealth, privilege, and ignorance.

49-2-199

Elections in themselves are not proof of democracy. Elections in most of South America, Asia, Africa, and the Middle East are farces or pretenses because of the methods and the number legally or illegally disfranchised. In the Union of South Africa and the Rhodesias, the minority composed of whites who have the right to vote, impose its will on all. In India, illiteracy and poverty make popular elections a very imperfect expression of the public will. In Poland and the Balkan states, before the war, the landholders controlled the voters. The voting in Italy today expresses the power of property and of the Church. Even in typical democracies, like the United States, Great Britain, Canada, and Scandinavia, an election expresses the will of those who are in social control of the nation, by privilege, by monopoly, or by economic ownership. No real democratic decisions can be made unless the electorate is intelligent and free to decide questions without fear of loss of income or status. There is no pretense of democracy in Georgia or Mississippi; in Spain or Bolivia. In most states of the United States, wealth and industry have overwhelming influence in the elections; while in Britain, Canada, and Scandinavia, where the popular will comes nearest full expression, it is greatly influenced by fear of poverty or lowering the standard of living. This makes "plebiscites" so unsatisfactory. They are nearly always rigged in favor of the holders of wealth or power cloaked in religion or prejudice.

Russia is not today a democracy, and elections are influenced by the Communist Party. But the Russian people, of both sexes and all economic classes and all races and groups, take wider and more continued and more intelligent part in democratic processes than is the case in any other modern nation. In no country on earth, do over ninety per cent of the qualified voters go annually to the polls to elect directly their highest law-making body. And that act is not the beginning of their democratic functions; it is the end of a long series of arguments, debates, decisions and elections

which culminates in this final act.

What are the difficulties which every attempt at democracy faces? They are:

A. Stupidity of the voters.

B. Lack of time or interest for anything outside of earning a living.

C. Local conditions and inability to change.

D. Ignorance of national affairs.

Most politicians in a democracy take to demagoguery in despair, since the voters are too ignorant to understand issues or too uninformed to listen to discussion; so the candidate entertains them with jokes and platitudes and gets them jobs and graft. Moreover, people working ten hours a day and worrying about low wage and high costs, anxious about their children and their jobs, cannot be interested in politics. They are interested in bread and clothes and shelter. In the United States it takes a most strenuous campaign to bring half the voters to the polls, and even then the candidates on the ballot mean nothing to most voters and interest is centered on the candidates for president and not on representatives in the state legislatures, or on the city councils.

In the Soviet Union, on the contrary, political activity begins where it should--in the village, the farm and the city ward; it begins with matters of vital interest to the people, that is, work and wage and living conditions -- matters not simply of interest, but of personal knowledge and experience. Everybody wants to talk about these matters; everyone attends meetings twice or three times a week; they discuss the local industries; the water supply, the schools and the man or woman best fitted to represent their thought and decision in the county meetings. If the delegate selected does not act and vote as they wish, they promptly recall him and substitute another.

In most democracies, the powers of the localities, states and national

49-2-201

governments are all limited by written constitutions or long custom; so that there are wide areas of "no-man's land" in government where nobody has any right of rule and matters adjust themselves by chance, or just "muddle along." This was in accord with eighteenth century ideas that the least government is the best; and where work, wealth and wage were designedly excluded from government control so as to leave more "freedom" for capital, privilege, and monopoly, none of which were subject to democratic control.

The Russian state seeks to change all of this. There is nothing which a village soviet cannot discuss and express opinion upon and take preliminary action on matters pertaining to local, provincial, or national life. If, however, the village takes any action which the province in which it is located decides is unwise or beyond the power of the locality, it can veto subh action; and in turn the actions of provincial and state legislatures can be vetoed by the all-union legislature. But manifestly, if such power of veto were used often and arbitrarily, the local interest would soon die. On the contrary, the locality is listened to with care in Moscow. On the local matters its decisions have great weight and are interfered with only when they infringe on rights and needs of other or larger units. The local discussions and vote is an invaluable sounding board for public opinion and maladjustment. It is listened to. The veto is used but as rarely as possible. However, more than this is needed. The people must be kept informed. Their mistakes in decision are more often due to lack of understanding than to bad intent. They need knowledge and direction. They must be taught history, they must understand the aims of the State, and its ideals. Here is the function of the Communist Party.

This organization is not a political party, in the sense of the English Conservatives or Republicans. Such political divisions occur in Russia but they are the local splinter groups which the Western democracies regard as indications of political immaturity. On the contrary, the Russians

49-2-202

realize that public opinion on human affairs seldom falls nicely into two or three distince categories. In the European eighteenth century there might have been two clear-cut sides to the question as to whether or not the masses should vote. But in France of the twentieth century there are indeed six or seven, if not a dozen, clear differences of opinion as to public policy in general; and in particular touching dozens of localities and social problems. It is this situation which Russia is trying to meet and guide to solution.

Just after the Revolution there was a time when two distinct national parties in Russia divided finally between Trotsky and Stalin. Stalin won; since then the one political question in Russia is the technique of carrying out socialism in a single state until full communism is possible. This is a matter of infinite trials and decisions; but not of national party division. It is always possible, especially with growing national intelligence and scientific advance, that large party differences will appear in the future. But this the leaders of Communism hope to forestall by social experiment, hypothesis, and research, so that Government will approach a Science and not be merely Opinion and Experiment.

The so-called Communist Party then is not a political party, but an over-all agency of adult education, carefully selected from the best elements of the Union, and regularly reorganized so as to represent the best in character and ideals. It is not a privileged aristocracy, cultured and pampered and confined to the great cities; but a section of all the workers and managers and thinkers distributed to every part of the Union; doing the labor and sharing the fare and receiving the wage of the masses; and yet, organized in a hierarchy to meet regularly and discuss from complete knowledge all aspects of the life of Russia. From such members, every locality of Russia gets information and guidance and usually at the desire of the localities and their insistence, rather than forced down from above. For here

49-2-203

at their own factory or farm, is a fellow-worker who can and will teach and whom they trust.

One may say that this is ingenious propaganda, ~~but~~ if it is, then the test is, does it work? Does the land prosper under this regime? Has a nation been organized and put to work? Has it been willing to give life and fortune to defend this land? The answer is, Yes. Perhaps the greatest tribute and proof of success of the Soviet Republic is the type of public servant that has emerged from the travail of founding a new government; for hard work and sacrifice, for clear vision and courage, the world must acknowledge the work of Lenin, Stalin, Molotov and Vishinsky, and of thousands of others less well known. How has this been accomplished? By a planned economy on a scale never before attempted on earth.

4. Has the Soviet Union been able to carry on a planned socialist economy for Russia with State control? The Soviet Union has taken no census since the war; but it is estimated that there are now 200,000,000 inhabitants of the sixteen constituent republics and thirty-three other territories, occupying an area two and one-half times the size of the United States. There are more than sixty nationalities in the nation and in addition many smaller groups. The economy of the land is Socialist; that is, property belongs to the State, or to cooperative groups, or to individuals. To the State belongs the land and its resources; waters and forests; mines, factories, and railroads; post offices, telephones and telegraphs, banks and state farms, municipal enterprises and most city homes. Cooperative groups own jointly, farms with buildings, livestock and implements. Individuals have private use of farms which employ no outside labor; they own the income from their labor; their savings; their household furnishings and tools and utensils, and articles for personal use. All of these goods may be inherited and bequeathed.

The industry of the nation is directed by a state national plan, which

locates the centers, the kind of enterprises, the amount and sort of goods produced, and the relation of industry to agriculture and cultural activitie. The progress of this planning is checked as it progresses and full statistics are kept. The planning coordinates the smallest units into the overall plan.

The planning since 1928, has been forecast in five-year periods. The first and second Five Year Plans, 1928 to 1937, socialized all industry and over ninety per cent of the agriculture. Production was doubled and private enterprise reduced to less than six per cent of production. Illiteracy was almost eliminated and universal free and compulsory elementary education introduced. A third Five Year Plan, 1938 to 1942, was disrupted by the Second World War. Its object had been to increase the production of consumer goods so as to ease the strenuous lives of the people and thus progress from Socialism, which was based on the dictum "from each according to his ability, to each according to his work;" to Communism, which would declare "To each according to his needs."

This goal had to be changed to defense in war against the greatest military machine of modern times. Consumer goods had to be held up to allow a 76 per cent increase in machines for military effort, and the nation plunged into the very depths of a life and death struggle for survival. Directly and indirectly, the Soviets lost 15,000,000 human beings; 32,000 industries with 4,000,000 workers were destroyed; including the gigantic power installations into which the nation had poured its labor, sacrifice, and pride. Mines, which yielded annually a 100,000,000 tons of coal were closed.

Over 600,000 square miles of territory with a population of 88,000,000 were occupied by the enemy armies at the height of the German invasion. In this area the invaders demolished and burned, completely or partially, 1,710 towns, over 70,000 villages, 98,000 collective farms, over 6,000,000 buildings, 31,580 industrial enterprises, 40,000 hospitals and medical institutions, 84,000 schools, 48,000 public libraries, and 25,000,000 people

49-2-205

were deprived of their homes. The devastated area included some of the richest and most highly developed industrial sections of the country, accounting for about one-third of the prewar industrial putput.

Beginning in 1946, a year after the Peace, the Fourth Plan was inaugurated and is now in operation, hampered by the "Cold War," and the grim necessity of maintaining and defending the nation's integrity and especially guaranteeing her borders against infiltration; but even more, the task of maintaining against resurgent capitalism in America and Western Europe, the right of a socialist state to live and function.

It is a most difficult task, but there are signs of success. By the second quarter of 1949, industrial output had increased 41 per cent over 1941, the first war year; real wages since 1948 have been doubled, and the total expenditure on education and social services has greatly increased. The average annual wage is now 6,000 rubles, and the average worker has a forty-eight-hour week, and an annual vacation with pay.

When one compares the standard of living in the U.S.S.R. with other countries, allowance must be made for social service, such as medical care, birth-expectancy vacations, and regular vacations; free education and payments made to students in higher schools and extra payments to large families. These items increase money wages by about 38 per cent.

To illustrate this, take the case of Praskovja Pavlovna Zaikina, who lives at 64 Trifonouskaya Street, Moscow. Praskovja started work in 1925 as a knitter at the Nogin Stocking F actory. Some years later she received three months leave with pay to learn how to overhaul machinery. Every year she received a vacation during which her wages were paid. She paid two-thirds of the cost of her vacation expenses; for instance, in 1947, she stayed at a Rest Home near Moscow; the cost was 400 rubles but she paid only 120 rubles. In 1948, while her children were at camp, she spent a month in a mountain sanitarium in the Caucasus. The cost was 1,000 rubles of which she paid

49-8-806

300. Meantime, she received her factory wages. One winter her daughter had grippe and measles; and later she herself was ill in bed. Medical care cost her nothing and she received her salary while ill.

After the death of her husband, a pension was arranged for the children. Her own earnings were 1,000 rubles a month and the childrens' pension 200, making 1,200 rubles in all. For her apartment, two rooms and a kitchen, she pays 47 rubles a month. Her children attend school free. The girl is in the Second Grade, while the boy, fifteen years old, has completed seven years of education. He will enter a machine building high school next year and will receive wages while studying.

In summer, the children go to a Pioneer Camp. The expenses for the summer vacation, 800 rubles each, is paid by the factory trade union. The family had given them a lot for gardening also by the trade union. Here they can raise their own vegetables. Libraries are near where they can borrow books without charge and there are clubs and parks. When the widow is too old to work she will receive a pension from the state.

By 1948, Soviet industry was about restored to its prewar level and volume, and a great increase is expected in 1950. Russia is today the second greatest industrial power in the world. She will soon be the first.

5. Is the Soviet Union a slave state? There have been lately, stories of increasing virulence, accusing the Soviet Union of forced labor, and declaring from 1,000,000 to 14,000,000 laborers are in concentration camps or otherwise forced to work as prisoners of the state. The Russian trade unions especially have been accused as state-controlled.

It is easy to see how in time of war and recovery, and in the case of a nation whose whole economy is under suspicion and attack, such accusations should arise. Labor in the Soviets is under stricter discipline than in Western lands and in return has greater protection and social insurance. There were in the Soviet Union labor drafts during the war; there were millions

49-2-207

of war prisoners; there were the criminals. Of these, some were recalcitrants, like the evacuated kulaks, and some had committed conventional crimes. Before the last war, crime decreased markedly in the Soviet Union between 1922 and 1928. With the forced farm collectivization it increased between 1929 and 1933. Between 1933 and 1937 it decreased over fifty per cent.

The problem of the treatment of war prisoners was difficult and aroused bitter feelings. Ehrenburg said, "We will not asphyxiate people with gases or bury them alive, or cut off girls' breasts. We will not yield to the instinct of revenge. But we want to know that Smolensk, Warsaw, Rouen and Belgrade are rebuilt before the Germans are allowed to rebuild Lübeck or Cologne."

Without doubt, war prisoners in Russia had a hard time. But Russia, with her own criminals and recalcitrants, had a method and an aim. I saw it in her dealings with the "wild children" in 1926. Her method is not simply punishment, it is also reeducation by labor. It was hard labor, but not useless "made" work. It is well known that the great Baltic-White Sea Canal was built by convict and kulak labor. It was bitter labor, but the prisoners were not cruelly treated. They had food and clothing; and some won public awards. Drafted labor in wartime is understandable and in the Soviets at the time it was done willingly. All of this would account for a large, but not unreasonable number of forced workers, decreasing as prisoners were sent home and as war emergencies disappeared.

There are other gruesome stories of forced labor in the Soviet Union which lack verification. Some are spread by professional enemies of communism who do not seem themselves to have had any chance to verify their charges. The Soviet Secret Police under Beria are said to be in official charge of a vast forced labor reservoir. There can be no proof of this unless the U.S.S.R. gives us figures or allows inspection, which is not likely under present conditions. It does not seem probable that Soviet economy is to any large

803-8-64

degree dependent today on slaves.

In general and in normal labor relations, the task of Soviet workers does not seem hard. Of 30,000,000 Soviet workers, 28,000,000 are enrolled in trade unions. These unions are concerned with the workers' welfare; administer social insurance, recreation and health activities, and oversee safety and working conditions. They make agreements with managers on conditions of work which are subject to arbitration and frequent review. The dues are one per cent of wages yearly. In social services they fare better than Western workers: medical and dental care are free; there are 700,000 free hospital beds; workers are paid when ill and compensated for injuries; mothers have maternity care with pay; there is life, fire and theft insurance. Education is free and adult education is always available.

It is in the wage contract that the worker in the Soviet differs from other labor. In the Western world the wage contract is usually between worker and private employer, and the union is chiefly an organization to increase wages and better working conditions, by bringing pressure upon the employer through contract or strike. In the Soviet Union the employer is the State and the Trade Union Organization is an integral part of the state. An analogous situation is arising in Western lands where the union is composed of Civil servants, like police or post office employees. Legally they can strike, but they seldom do. If in addition, they had representation in, to influence legislation and management, they would approximate the Soviet trade union. The Soviet labor unions participate in all labor legislation, and the union labor codes are much broader than those in Western areas. The All-Union Central Council of Trades Unions is the staff headquarters, with departments covering wages, organization, labor protection, safety, insurance, rest homes and sanitariums, hospitals, culture and education, physical culture, sports, publications, housing and living conditions; legal matters, international

49-2-209

relations, and statistics. The unions may propose new laws. Strikes are legal but rare; because the object of industry is not private profit, leading to continual strife on the part of management to lower wages and on the part of labor to raise them. The object of both labor and management is to increase production and at the

49-3-210

same time increase the living standards of workers. Workers then voluntarily speed up production and share in the sacrifice of wages which are geared to national welfare. Government and unions collaborate on wage scales. From eight to twelve categories of pay are set according to skill and a basic hourly rate for each grade. For instance, in one industry the base pay is eight rubles a day for unskilled work, rising to 28.5 rubles a day for the highest skilled work. This is the ~~basic rate~~ usual method; but much work is paid for on a piece-work system. Steel workers who earn from 7,200 a year from common labor to 30,000 annually for the most skilled, averaged in 1945,10,800 rubles. The top managers get ten times as much; while in the United States they often get as much as one hundred times as much.

Most Russian workers regard their paid vacations as their best incentive, along with medical care, insurance and education. The Soviet effort to protect motherhood and care for children is without doubt the best in the world, with prenatal care, nursery schools, and kindergartens.

6. Does the Soviet Union suppress religion? The Soviet Union broke the power of the Russian Church, and ~~for a time~~ taught atheism in school and by propaganda organizations. Moscow, which once was studded with the golden domes of churches, had in 1948, some thirty churches, while New York has 2,000. The younger educated people are atheists or agnostics; but there are 1,000,000 Catholics, 2,000,000 Protestants, 3,000,000 Jews, 500,000 Buddhist, besides 30,000,000 whose background is Moslem; and at least 100,000,000 from Russian Orthodox families. But this does not mean that many of these connected with the larger religions, are today orthodox communicants of their churches. There are in Russia today some 15,000 priests as compared with 70,000 before the Revolution. Russia represents today that emancipation from dogmatic religion which Western Europe has professed since the Protestant revolt, but which has been only partially realized; indeed, today Europe and America can praise the Soviet Union for establishing actual freedom of religious belief.

49-2-211

I know nothing today which does more harm to our ability to think logically and act rationally than our conventional lying about religious beliefs. Very few intelligent, educated adults today believe in current religious dogma; they do not believe in God, unless one means by God some impersonal force like Gravitation; they do not believe in Prayer, unless prayer is interpreted as earnest wish; they do not believe that any priest is in such personal communication with the ruling forces of the universe as to receive miraculous knowledge of past or future.

Yet, for the object of guiding children and overawing the ignorant masses, we regularly and unashamedly and publicly declare our belief in a personal and benevolent ruler of the world, who on request may change the course of nature or adapt it for our benefit; and in a human organization which knows more about the past and present and future than science has learned. Yet, in the face of this reiterated declaration of belief, we talk and act with absolutely no reference to such assumed facts, causing amazement, bitter protest and mental confusion among the naive persons who assume we are telling the truth. I can see in my mind's eye that bemused and bewildered young priest in Vienna, who recently refused a bishopric in what seemed to him a world of lying or heresy. The picture of his innocent and bewildered face tells the story of disillusionment.

The Soviet Union is seeking to establish a nation of people who have the right to live and talk in accord with scientific truth so far as discovered. This attitude they teach their children and try to guide the state, their work, and all social activity along this line. They do not forbid, but they discourage citizens of their country from joining churches or adopting dogmatic creeds of "revealed" religion. It has been commonly assumed in civilized lands that this was already among the liberties of modern times, ~~won~~ gained by the bloody Protestant Reformation; that the battle of freedom of religion had been fought and won, save in ignorant and backward countries.

49-2-212

As a lad, I was taught in American schools that the battle for freedom of belief was fought in Europe in ~~the great Reformation of~~ the seventeenth century against the totalitarianism of the universal Catholic Church; that for thirty long years of total war Germany was devastated from end to end to establish the great principle of the right of man to think his own thoughts. It was drilled into me that the United States of America was founded as living example of a land free to worship God as it would, or not to worship if it would not. Yet I have lived to see honest men hailed before Congressional committees without rights of defense granted to criminals; browbeaten by representatives of Mississippi disfranchisement and New Jersey theft and lying, and ordered to reveal their beliefs or go to jail, while the Supreme Court turned its silken backsides. There can be no dobut but that the body of great Americans who drafted the Constitutions deliberately left out of that document all reference to God, Christ, or revealed religion, in deference to the atheists and free thinkers in ~~this~~ *that* body and to confirm the principle that the right to believe or not believe in religion was fundamental to the law of the United States.

Yet today in the United States, the president of Columbia University can justify war on Russia, because "hundreds of millions behind the iron curtain are daily drilled in the slogan, 'There is no God and religion is an opiate'." Has a nation no right to do this?

It is not so much a matter of invective and crusade, as of explaining to honest folk, why it is that in lands which profess the most intimate relations with the Almighty, there is and has been the most cruel denial of basic human rights; as in Protestant countries like the Southern United States and the Union of South Africa; and in Catholic countries like Italy and Franco's Spain?

7. Does the Soviet Union today represent an aggressive and expanding imperialism? The charge of imperialist aggression on the part of Russia is undoubtedly at the basis of the "cold war" and the main expressed threat

49-2-213

of a Third World War. It usually bases itself on:

A. The annexation of the Baltic states

B. The rise of Communist states in Poland and the Balkans

C. The triumph of the Communists in China and the threat of Communism in eastern Asia.

The Baltic states of Esthonia, Latvia and Lithuania were integral parts of prewar Russia since the eighteenth century. They were made separate nations after the Revolution of 1917 for the express purpose of establishing a "cordon sanitaire" from which the West in time could overthrow the Soviets. For a decade these states and Poland were the source of repeated attacks on Russia, and the Soviet slander. It became, therefore, a matter of faith for the Soviet Union after World War II to demand the incorporation of these lands for essential self-defense. This was clearly understood by the West.

The Balkans have for centuries been the center of unrest and oppression, dominated by greedy landlords and privileged nobles, and gradually becoming the center of increased capitalist exploitation by investors from Western Europe and America. As the industrial and investing nations became bitter enemies of Russian socialism, it was a question as to whether the West or the Soviets should dominate these lands. Domination did not come by Russian conquest; but rather by ~~means of~~ Russian refusal to allow Western capital in union with landlords and native exploiters to take over countries, where the vast majority of the workers and peasants were striving for emancipation.

It is, of course, doubtful if the ignorant proletariat alone could have planned freedom and industry, if left to the power and influence of Western Europe. But with the vast Russian armies in readiness to repel interference from the West, these lands started to plan socialist regimes. There can be no doubt but that all of them today show greater economic and social progress than ever before in their history. This was not Russian imperialism; it was the refusal of Russia to allow Western imperialism to take over these

49-2-214

nations
~~hands~~. It was the knowledge that force would be met by Russian armies from the East. Russia gave Revolutionary China education and training in leadership at the request of her great leader, Sun Yat-Sen. Later, under Chiang Kai-shek, Russian influence was driven out, and for many long years the West tried to seize China by every available means of armed force, deception, lying, stealing, and bribes ~~graft~~. America wasted $6,000,000,000 of her taxes on the poor to establish a scoundrel as master of 450,000,000 slaves for the white world. Who is the United States to talk of imperialism?

China, without the help of Soviet soldiers, beat back traitors and invaders and established the present republic, upon socialist principles. This was not an imperial conquest by the Soviet Union; it was the victory of the Chinese people despite arms and bribes from free America.

It is not then, that the Union of Soviets is imperialistic in design which has spread Communism in the world; but the impact of an idea and a way of life. It has met world-wide opposition. Russia has not attacked the world; the world of wealth and social and military power has attacked and plans still to attack Russia and to eliminate Communism, not by argument or example but by brute force. This was what Lenin and the early leaders of the Soviets feared; that is why they insisted at first that without worldwide socialism Communism in one land could never succeed. They may have been right. To this idea Trotsky adhered and made his attempted treason with Hitler. But Lenin was willing to try Russian Communism without the world; and Stalin eventually carried his policy to the present triumph.

This opposition slowed up the development of socialism by forcing its pace toward indu trial organization and collective farms to heartbreaking speed; by involving Russia in two World Wars with endless fighting between, cold and hot. Today, Russia has no plan of conquest. She does not have to. If the present spread of socialism is maintained, the world conquest will be moral and economic, not physical nor murderous.

49-2-215

If the Soviets had succumbed to capitalism and welcomed Western investment; if with dividends and cartels, they had joined Great Britain, France, and the ambitious United States and added opened the rich Heartland and Balkans to the world areas of loot, where profits of 50 to 100 per cent could be expected, the Soviets would today be safe from war and as honored and worshipped as in the days of the czars and grand dukes. But would Mankind have been as happy or as hopeful?

8. Is it true that the Soviet Union has driven out race prejudice? It seems to me true, that in no modern land which I have visited, is there so little consciou ness of racial differences as in Russia today. In the great Moscow Peace Congress which I visited, on the streets of Moscow and Gorki and Odessa, in social intercourse and in current literature, I, who am supersensitive in matters of discrimination, could see none in the Union of Soviets. Patent differences of physical type were manifest. At the Congress were black, yellow, brown, and white faces; especially was the Mongolian type frequently seen. There was no shadow of segregation nor discrimination.

Of course, the law is clear; but for that matter so is the law in London and New York. In neither place am I protected from discrimination based solely on race. The reason for Russia's attitude is not superior ethics, but her early consciousness of the danger of racial and cultural discrimination. The leadership of the Jews in the revolutionary movements emphasized this attitude; but the early experience and convictions of Joseph Stalin were invaluable in implementing this attitude. Born and nurtured in a congeries of races and religions, he sensed from the first the tyrant's rule of "Divide and Conquer" on which the British Empire was built; he experienced pogroms of Czarist times; and from the first, in building Communism, he was the leader most conscious of the dangers of race prejudice; and

F8-2-215

as commissar in charge of Nationalities, he implemented the legislation.

Moreover, the Soviets saw in race antagonism, only a variation of class struggle and it was class differences which they were set to abolish. They knew that race prejudice in Russia, America, Spain, and Britain had been the basis of class exploitation for economic power. Inferiority did not enslave Negroes in the United States, but the slavery of labor in the cotton kingdom made Negroes highly profitable. The British slave trade in Africa was a paying investment which was the foundation of commercial empire and not simply of racial hierarchy. This the Soviet Union planned to avoid and succeeded.

Of course, in Russia, the problem of Jews was from the first uppermost, for religious and economic reasons. The religious disabilities were quickly swept away. When economic exploitation appeared, whether by Jews or Gentiles, it was suppressed. It is possible that certain actions against the threat of exploitation or against the more likely rise of religious autonomy, which appear in the Soviet Union today, can be misinterpreted as resurgent anti-Semitism. There is no proof, however, that this is true, although the fact is being alleged by enemies of the Soviets.

9. How far does the Union of Soviet Socialist Republics restrict Art and Literature? The Soviet Union aims at the Good Life, with freedom and variety; but it recognizes that first, men must eat; that no enduring culture with adequate art expression can be founded on poverty, ignorance and disease. Whenever and wherever that is attempted, there results the civilization and art of a small section of th nation and world, threatened without by the rude and hungry barbarians and within by eventual dry rot.

The Soviets began with an ignorant and poor folk, with perverted standards of servility and selfishness, and with not much of value in cultural heritage; and all of these overawed and frightened by the worst forms of dogmatic religion. The transforming of this mass into an inteligent

44-2-214

nation, with adequate income for all, a high standard of living, ideals based on the best which the world has known and creative energy for the future -- all of this called for thought, effort, experiment, and time.

Time, the Union of Soviets has not had. Subtracting the waste of foreign and civil wars, this new pioneer among nations has had less than a generation for constructive work. Yet education must go on side by side with production of food, shelter and cloth s and defense. The path to the ideal must be guided and straight. Error and decadence; debauchery and luxury must be kept at bay.

So the Soviets have restricted art and literature to what they think is inspiring, uplifting and informing. "The force of Soviet literature lies in the fact that it neither has nor can have any other interests except those of the people and of the State. Its task is to help the State to educate the youth." They have sternly excluded American "comics," ~~and magazines, and~~ French pornography, and British aristocratic ideals. They have reverted to the classics of all tongues as embodying the tested taste of humanity.

In painting and sculpture they have exhibited in popular and daily crowded museums the best examples of the past, with little of the still disputed modern art. They have induced the masses of people to read to an extent never equalled in ancient, mediaeval or modern times by any nation on earth. The Soviet Union is today the leading European country in book publication with almost 40,000 titles annually; an overall circulation of 800,000,000 copies, distributed through 3,000 bookshops.

The leading place in published books belongs to the mulatto, Pushkin. Within the last thirty years, his various works attained a circulation of 35,000,000 copies; on occasion of the 150th anniversary of his birth, no less than 250 titles by or about Pushkin were published, totalling 11,000,000 copies. Leo Tolsoty comes second; almost 1,000,000 of his works are sold

8.8-2-44

yearly. Turgenev, Gogol, Lermontov, Nekrasov, Saltykov-Shchedrin are also among the favorites, and their works, published in many millions of copies, are avidly bought and read by the average Russian.

Statistics of the Soviet Book Chamber for the past thirty years indicate that European classics in translation are also high in publishing totals. Victor Hugos 4,000,000 are followed by Guy de Maupassant 4,000,000, Balzac, 2,000,000; Stendhal and Anatole France 1,800,000 each. Dickens 2,340,000 and Shakespeare 1,611,000. Cervantes, Schiller, Goethe, Byron are also widely read, and their works are published in hundreds of thousands of copies.

Among American writers, Jack London, James Fenimore Cooper, Mark Twain and Bret Harte are the favorites. Contemporary writers like Shostakovich, Shastokovich, Fadeev and Ostrovsky have a circulation of 2 to 6 million copies.

The 7,200 Soviet newspapers have a daily circulation of over 31 million. One-third are printed in 80 non-Russian languages. All republics, regions and cities have their own papers. Pravda, with its daily circulation of over two million, has one of the largest circulations of any single newspaper in the world.

"The Soviet Government has encouraged high standards in the opera, ballet and radio programs. The ballets of Moscow and Leningrad are the best in the world, and the legitimate theatre is excellent. The States sees to it that musicians can compose and play, writers can write and artists can paint in comfortable circumstances; because the government is well aware that the task of raising the cultural level of the Soviet people to that of most of their European neighbors still is far from complete."

49-2-219

It is often explained to the unitiated, that all present Russian culture does not stem from the Revolution; that much in the ballet and drama, literature, art and architecture, comes down from Czarist times. This is no criticism of communism but rather a tribute; for leadership consists not simply in innovation and invention, but even more in selection, preservation and re-building ond old foundations. This communism has done. Moreover the Empire of the czars owned much of its culture to the revolutionary elements preceeding the successful overturn and only partially used under the empire.

There are altogether 926 theaters and opera houses in the USSR, including dramatic theaters, opera and ballet theaters, musical comedy and operetta theaters, collective farm theaters, and childrens theaters. Thousands of special theaters and musical groups are run by trade unions and other organizations, and hundreds of concert halls. The all-Union Art Exhibition, which is to be opened in Moscow this Autumn, will display the works of 2,000 painters, sculptors and engravers from all of the sixteen republics of the Soviet Union. Art is encouraged by teaching music, painting in schools and academies.

On the other hand, they have restriced originality in lines which they feared might be misleading or arouse dangerous tendencies. They have not hesitated to criticize composers, reject experiments in literature and drams. Here lies the danger of censorship by the State and the cramping or stifling of originality of genius. Education itself is at present unduly slanted toward machine production and progress measured too much by material ~~progress~~ advance.

The Soviet leaders recognize this danger. They have eased censorship materially so that new authors and playwrights and composers

49-3-220

continually appear and the present output of Soviet art and literature is by no means negligible. But, say these leaders, the nation must eat and eat well; it must produce and produce much more widely, largely because world commerce is denied us save on fatal terms. We must see that our folk know and recognize what part civilization has left us before they start to create with out standards.

The Soviet Union appreciates the Good Life, with Freedom and Variety. It knows that this cannot be created and enjoyed in a moment. It sees in the United States a free land, debauching its freedom from failure to know the past. It refuses to duplicate this mistake even at the cost of some repression. It says: "Once we have set for this nation, standards of taste founded on the best things of the past; once it has food and clothes and shelter so as to be free of fear and want. Once we have peace, then we will set no barriers to genius and innovation trusting the judgment of a great intelligent nation to choose the best and preserve the worthy. Until then, even with some chance of loss we will guide the mass and suffer what we now regard as evil.

10. How free is Science in the Soviet Union? Science has never been free; the danger of knowledge has always been felt and it has been chained by dogma since the beginning; but equally it has repeatedly freed itself, for man must know in order to live. Usually science, systematic and integrated knowledge, has been the secret and perquisite of the few and has been used to guarantee their power; it was kept from the masses lest they misuse it and thus either hurt science or with it displace the Priest or Landlord. So Life has been the continuous unbinding and binding of knowledge, as well as its slow broadening and integrating.

49-2-221

In the modern Western world the freedom of science has been opposed by the Church and by society, organized in social and economic groups. The church long imprisoned astronomy and biology; and social organizations kept learning away from the poor and thus hermetically sealed anti-social activities.

In science the Soviets are facing a problem which the West has refused to face: how far is Science a servant of the common weal and how far independent, self-sufficient and individual? Science as aimless, unconditioned search for knowledge, has wrought havoc in labor and technique; it helped to form the factory system with its wretched poverty; it joined slavery and factory to which fastened colonial imperialism on the world; it developed mass production and opened the way to two world wars; it unharnessed atomic energy and made the destruction of the earth possible. What is the remedy? We surely want to leave speculation and curiosity free; ingenuity uncurbed; but unless we are willing to arm evil with all devises to destroy, the nation must in some way and by some method control the scientist and make him a social agent for good, and not a man so free that he cannot be held responsible in any way for anything he does. This is the problem facing American science today.

But Science in the 20th century has not been as free as we love to picture itself. It was directed by colleges dependent on the rich and on government in the hands of business men. No American history which attacked slavery or social science which taught the essential equality of men, got the endowment needed for buildings, books and laboratories, nor did scientists who denied the inferiority of Negroes get the better appointments. Thus the wide acceptance of Mendelism was not entirely a matter of free scientific inquiry; it was in part the pressure of income based on the subjection of the darker races to the greed of the whites.

49-223

Recalling the Lysenko controversy in the Soviet Union, the Western world has welcomed the scientific hypothesis of the unlikelihood of acquired characteristics being inherited; because it justified the popular doctrine of race and group inferiority and made American Negro slavery justifiable. This defense was a matter of private organizations and not of the state; and yet private churches and cotton manufacturers and captains of trade easily made the policy of the state which passed the slave codes.

Lysenko said: "You must not thinkthat science or thoughts are planned in this country. The tasks are planned. The thoughts are free. You have certain jobs to do. You can think out how these jobs should be done."

Russia needed winter wheat to be grown in the cold of Siberia; it needed to increase its crop of millet five-fold; it needed better all-purpose cattle. Lysenkco accomplished these results, not by solving the mystery of chromosomes but by taking the whole set-up, seed and plant, land and weather, man and machine; and leaving a side the theory and the conditioned experiment, he worked until he got the wheat, millet and cattle. The Soviet Union decided to give its official support to his methods, because Russia must have food; they did not, as has been alleged, kill or starve those scientists who wanted to work in other ways and for objects more nearly approaching "pure" science; they gave them work and wage, but removed them from control of the main work of the state for increasing the crops and bettering the animals of the Soviet Union. Thus in a way they narrowed the freedom of science, but certainly no more than science has been curtailed in all Europe for many centuries.

Any interference with the freedom of science is dangerous; but the reasons for such interference are various: they may be to buttress the

49-2-224

power of religion; or to save the ignorant from inflicting harm; or and more often, for making money for the few. None of these motives led the Soviets. Soviet philosophy of the state at present disavows the Ivory Tower aspect of sci ence in the West. The Soviet Union regards science as an instrument for the uplift of the masses. It refuses to regard science as a plaything for an elect few; or as an ideal pursuit without definite gaal. Not Truth as such, but Truth for the welfare of the people is the goal, and in the current titanic struggle of the world, all and everything must yield to the public welfare as the Soviets see it.

Doubtless just here the Soviets justify their action in the Lysenkco controversy: if their decision results in better crops and stock, they will pursue it; it not they will repudiate it. If no decisive judgment is indicated, they will pursue their way as now, but with intense effort to get indisputable results. Following this aim, Soviet Science has flourished. Already with her intellectual career hardly begun, this nation has encouraged scientific work ~~and~~ begun before the revolution and forged forward notably in nearly every area of scientific research. It may be that in eugenics, it has allowed economic expediency, and the desperate necessity of pushing production at top pace for war reconstruction and defense against increasing western threats, to forestall full free scientific inquiry. Of this I am not sure, but it may be so. But even if it is, the vast effort at education in this nation is sure in the end to rectify the mistake. The Soviet Union is never dogmatic in its theory or decisions. It has always been ready to rectify mistakes. With increasing intelligence among the mass, the area of scientific freedom in the Union must increase and be increasingly regarded as inviolable.

49-2-223

The Communists rest their ultimate appeal to mankind on exact science. They seek to build a state on foundations of natural law and guide it by careful measurements, made continuously and tested frequently. The only variation from this fundamental thesis would be threat to the very existence of the state from ~~froce from~~ within or without. Even this should be resorted to most infrequently and its threat to basic science and ultimate knowledge ever recognized. This was true in Lenin's surrender to NEP and in the purges of recalcitrants and traitors in 1928 and 1938.

Today, the union of the most powerful part of the world in military alliance against the growth and existance of communism, means that socialist nations must strain every nerve to be sure of food and clothing and defense with their own borders. If making science the slave of production can be used to accomplish this end, it surely is justified. But only on the assurance that this step is necessary, is temporary, and its danger fully appreciated. On the other hand, if contrary to the conviction of scientists like Julian Huxley, Mendelism should ultimately be disproven, then Soviet science can only be blamed for premature faith in a hypothesis at the time unproven.

On the other hand, for nations like Italy, Britain and the United States to wax lyric in attack on this binding of the hands of free sceintific inquiry, in view of the doctrines of religious inquision, race inferiority and survival of the "fittest" on which these nations have based wealth and power by chaining free thought, seems hardly convincing.

The Academy of Sciences of the USSR, the leading scientific institution in the Soviet Union has increased its membership twenty-fold. In 1947, it numbered 436 Academicians and Corresponding members; and 4350 scientific

46-3-24

workers and 1050 post-graduate students were engaged in its various institutions. The same year the Academy of Sciences had nearly sixty scientific research institutes in Moscow and Leningrad, thirty other branch institutes and bases, sixteen independent laboratories functioning on the basis of institutes, more than thirty commissions and committees, five councils, fifteen museums, thirty-five stations, seven scientific societies and seventy-three libraries.

At the beginning of 1947, there were 921 agricultural research institutions; 1,664 sectors for the production of highquality seed; 4,924 seed control laboratories, and 88 agricultural colleges. Great, too, is the concern of the Soviet state for the development of medicine. At the beginning of the Second World War, the Soviet health protection system included 213 research institutes; 70 research laboratories and 72 medical institutes. Extensive research work is likewise being carried on in all branches of the national economy and culture.

In 1947, there were about 100,000 scientific workers in the country, among them over 10,000 Doctors of Sciences and Professors and about 25,000 Masters of Sciences and Instructors. During the decade following Stalin's speech at the reception of higher education workers, held at the Kremlin in 1938, a large amoung of work was accomplished in training scientific forces. In the higher schools alone, the number of scientific workers increased from 53,000 in 1938; to 80,000 in 1948. During this period more than 6,000 persons received Doctor's degrees and nearly 25,000 Master's degrees on the sciences; 6,000 became professors and 21,500 docents and senior scientific associates. At the universities and research institutes extensive work is in progress for the training of scientific personnel. In 1948, there were 13,000 post-graduate students in the USSR.

SECRET

Soviet History tells of the past, so as to increase appreciation of the present. It is too bad to omit Trotsky from history in order to erase the error of his treason; it is too bad not to record the accomplishments as well as the failures of America; but it must not be forgotten that the exploitation and aggression of the West is in part responsible for this. A nation which must protect itself against the atom bomb and the largest navy in history, cannot be too nice in its pedagogy. But the people of the Soviet Union read. They will progressively read more widely and with more variety. In time they will read not only what they believe but what they do not believe and know that this is the beginning of wisdom.

The years of abundance and the classless state have not yet been realized in Russia; but who can say waht may happen in a century, there and in Asia? The disappearance even of the State itself may in some far day prove the prophecy of Karl Marx.

49-2-226

11. Is the Soviet Union a civilized state worthy of recognition &c
Recently there have been reiterated accusations that the Soviet Government encourages lying and obstruction, does not keep its treaty obligations and maintains fifth columns in foreign lands. These statements, often repeated by responsible persons, are so clearly the outcome of hysteria that no reasonable answer can be made. I find no proof that the Soviets have broken treaty obligations or failed in keeping committments. They have declined to follow majority decisions or to accept the interpretations put on agreements ~~which~~ by other countries ~~make~~. Their so-called obstruction in the United Nations was perfectly legal, even if it was not in accord with our judgment.

We helped insert the Veto in the United Nations Charter and we would not sit in the Security Council if Ireland represented Great Britain. We have no right to insist that only our unchangeable formula for disarmament be adopted. In Greece, Korea, and China our role has been clearly outside interference, against the will of large minorities or even vast majorities of the peoples involved. The Soviets may have been equally to blame in the Balkans; but certainly they could not be more to blame.

But it is not true that the Soviet Union is unworthy of faith and recognition. Her saving of Western Civilization from Hitler amply proves that; and all nations bore testimony to this fact at the time. That this mutual faith and copperation has been broken is the calamity of our day and calls for redoubled effort to repair the breach.

I can interpret the Soviet Union today through my experience with ten million American Negroes in the last half of the nineteenth century. Despite all we knew and saw, we shrivelled before the judgments of men -- casual men, twisted men, men who saw what they wished to see. They saw our laziness from car windows; our incompetence from their servants; our crime from a thousand alleged thefts and rapes. We shuddered when we faced investigation; and went to Hell when we saw the activities of our traitors and "white folks' niggers." In defense, we boasted sometimes beyond the fact and retorted often with bitterness and hate. The tangled complex of our feeling of inferiority before arrogance and power tore the finer fabric from our inner soul and left us too often naked to ridicule and rebuttal. Yet we were right, as all men realize today; we were not supermen but men, with brain and heart and guts; and that we were and are going somewhere up yonder where our ideals gleam, most men now admit; but I remember the day when, to America, nothing black was beautiful, nor is it indeed to many today.

It is not an easy task to judge a nation, whether it be of ten or two

49-2-226a

hundred millions. It calls for Faith and Prophecy as well as Fact to build Truth. And neither one-eyed men, distorted souls nor ingrown self-worshippers can interpret a miracle, even when it is clear. In a recent book six men tell how they turned for salvation to communism and failed to find it. Three of them were, from the first, distorted souls born in Black America, the torn Balkans, and Fascist South Italy. Richard Wright came out of childhood in the American South with faith in nobody, and faith in human beings he will never achieve. He was a cynical, suspicious soul, despising Negroes little less than he hated whites. He wanted to be a writer and a group of Chicago Communists helped him generously. But soon he found himself at odds with the blacks because he was an "intellectual", and with the whites because discipline irked him. Of Communism itself and of the USSR, he knew nothing and cared less. He left the party. No system nor philosophy of any kind will ever convince Wright. He will remain always expatriate and alone.

Arthur Koestler was dragged from the middle class comfort of a childhood in Hungary into a Germany about to surrender to Hitler, with Communism as a distraught, ineffective underground conspiracy. He escaped to the Soviet Union, just when it was in the throes of the Trotsky conspiracy; and finally fell into the prisons of Franco. He denounced Communism when the USSR chose alliance with Hitler, rather than face Hitler's world alone; and in order to have time to prepare for Hitler's attack.

Silone was an Italian peasant and victim of poverty and Mussolini. He helped form the Communist party of Italy, and visited the Soviet Union for a number of congresses. He, too, was caught in the conspiring and evasions of the Trotsky treason, and saw his concept of liberty unrealized. He broke with his comrade Togliatti, and became a wandering exile until he returned to Italy in 1944, still in search of liberty and still unable to find it.

Fischer was an American reporter, descended from poor Russian peasants. He visited the Soviet Union first in 1922 and sympathized with Communism. He

44-3-22-4

saw the Soviets as an imperfect state struggling like Laocoon with the snakes of Europe. He hoped they might be scotched, but lost faith during the treason trials; had it revived in the Spanish interlude, and then, at dis-appeared with the Hitler alliance. He believes that liberty is dead in the Soviets; and that without liberty as Americans conceive of it, life has no meaning.

These four are joined by Gide and Spender, two intellectual exquisites, products of the wealthy and aristocratic cultures of France and Britain. They never had to earn a living and regarded work philosophically from afar. They could never quite grasp a culture founded on work of the hands, out and up from which it struggled to build all. Such an effort to Gide and Spender failed before it began, despite the thrill of a first glimpse.

One was a religious mystic in temperament who recoiled from Sin in any guise, even that of revolutionary struggle. The other was a born non-conformist who worshipped liberty as a God and not as an end. The mess of the Spanish uprising drove Spender out of Communism, after knowledge of a few weeks and with no visit to the Soviet Union.

Gide saw the dream of Communism as seers see Truth; but the grim reality of its birth-pains, with bad manners and sweat, revolted him and he turned his back on the struggle. But Time is not yet ended and there are a host of witnesses who still hope and believe.

Between the two World Wars, Sydney and Beatrice Webb, after long study pronounced the USSR a "new civilization" of the very highest promise. "Will this new civilization, with its abandonment of the incentive of profit-making, its extinction of unemployment, its planned production for community consumption, and the consequent liquidation of the landlord and the capitalist, spread to other countries? Our own reply is: Yes, it will."

49-3-23

Lord Keynes added: "Whatever the content of Russian Communism may be, it represents a gigantic human enterprise. In it men have resolutely embraced a purpose of reform and live tensely under the dispicline that faith instills in them. It is simply a misunderstanding of the European, to expect that he can hear unmoved that call to new action when he has no standard of a cause as great to unfurl in opposition."

What has happened to change these judgments, since the Second World War, where, in the eyes of the most reactionary soldier of our day, the Soviets made the greatest military effort in history and insured the victory of Great Britain and the United States over Germany and liberated France?

What has happened, is crystal clear: two world wars fought to restore, rearrange and establish more firmly the colonial imperialism of Europe over the world, with the United States as senior partner. The result of the unexpected advent of the Soviet Union, in a major role with Communism as a dominant and growing economic philosophy, was to make this aim of the West impossible so long as the Union of Soviet Republics persisted and grew strong. It was this fact which has convinced men like Herbert Hoover, Henry Luce, and Dean Acheson that a Third World War to overthrow Communism is inevitable.

49-2-2282

CHAPTER VIII

WORLD PEACE

There are two great objects which ought to bind the United States and the Union of Soviet Socialist Republics together in indissoluble alliance; and they are the abolition of war and the abolition of poverty. Both nations realize that another world war will fasten poverty on earth for a thousand years. Both nations know that in modern days they have led the world in realistic attack upon the degradation of the worker. It was revolution in the United States against exploitation of colonial labor that led to echoing revolution in France and Haiti, and resulted in uplift of labor throughout Europe and particularly in the great republic this side of the seas, where the wage and standard of living among the working masses today leads the whole world.

It was revolution in Russia that founded a nation built on the determination to abolish poverty in the modern world by equitable redistribution of wealth made through the democratic power of an intelligent people; and to start toward this great end by making the mass of people intelligent.

Thus peace and prosperity for all citizens of the state are the objects of both of these nations. They may differ, and have a right to differ, as to the immediate ways and means of accomplishing these ends; but there is and can be no question as to the desire of both nations to abolish war and poverty.

In such case, any agitation or careless and wicked mouthing of the possibility of war between these two peoples is worse than insanity; it is an attack upon mankind and civilization. It is a direct challenge to all men of good will to take firm and open stand not simply against war, but especially against all causes of war. It calls upon intelligent men to admit

49-2-229

that the greatest cause of war in the last five hundred years has been the degradation of the worker, especially through the colonial system and the human slavery upon which the colonial imperialism was originally built.

We know well that the main hindrance to security and democracy has been the fact that the attempt to raise the status of labor in civilized lands has for centuries been accompanied by the deliberate degradation of the laboring masses in colonial regions. The greatest insurance against future wars, which will continue to masquerade as national expansion and self-defense, will be the clear recognition of the right of colonial peoples to a living wage, education, and self-government. This desperately necessary advance step of mankind was foreshadowed in the Charter of the United Nations. But steps toward that preliminary trusteeship which will lead to the rise of the colonial peoples have as yet been slow and halting. This fact and crisis should bind the United States and the Soviet Republics in common striving against the determination of any country to perpetuate the colonial system.

This country cannot forget; and especially 15,000,000 American Negroes, victims of human slavery and the colonial system, must not forget that the slave system which stifled democracy in the United States for a century after the first brave effort to declare all men equal, is today denying under various guises the equal humanity of the majority of mankind; and here Americans should be the first to praise any attempt on the part of any nation to abolish race and class discrimination within the nation and in colonies which the nations control.

In considering any war between the United States and the Soviet Union, certain facts stand out clearly:

1. In war as fought today no amount of previous preparation can insure victory. If the Hitler war machine failed, it proved that the most careful preparedness for war faces today too many uncertainties to insure the outcome.

2. In any war between these two countries and their allies, no decisive victory seems possible; the stretches of territory are too large, the number of persons involved too great, and the costs in wealth, manpower, and materials too staggering to make conclusive victory probable.

3. The moral risks involved in such a war are too great for present civilization to survive: involving as the struggle must wholesale poisoning, mass murder of men, women and children, old and young, and total devastation, of land, forest, buildings, and vegetation, No dogma of brotherly love, self-sacrifice or diving guidance could survive such a shock.

4. The partial stalemate which would follow such a war could summon no conceivable allies in morality, science, art, or human health to rebuild in reasonable time the loss, frustration, and hopelessness which must follow such a cultural collapse. The ensuing dark age would transfer civilization from Europe and America to Asia and Africa, ~~with all the cultural losses of such change.~~

5. The European world, which knows, as we do not, what war means, would not join us in a Third World War, if by any possible maneuver it could keep clear. Since the Civil War, eighty-six years ago, the United States has had no wide experience of the real meaning of war. In the proposed world struggle, Americans would face as never before, blood and dirt, pain and want right on ~~its~~ their own hearth. It is by no means certain how far or how long this nation and all parts of it would respond to a call to fight for unreal and ill-defined issues.

6. There are today no issues or differences between the United States and Russia which could not more easily be resolved now in peace and patience than during war; or after either victory or defeat; or as is much more likely, in the ensuing stalemate.

We Americans have been called incurable romantics; and in no respect is this clearer than in our attitude toward war. Nowhere else in the modern world is careless, irresponsible reaction toward war so clear as in the United States. Nowhere in Europe is the state and its social institutions surrendered so lightly to military men or are army officers prodigally rewarded. This is because we are still under the spell of the old glorification of war which used to fill our school books and novels and is now current in our press. We are to be sure beginning to feel the pinch of taxation for the last world war, as we felt it for the first in the

49-2-231

thirties. But the impact of our childhood lore, with centuries of propaganda has not been yet outlived. We still thrill to martial music and glittering uniforms, "with trumpet and with drum." We still see plumed knights plunging ahead on neighing chargers, waving gleaming swords, and rescuing Virtue from Vice with glittering arms and thundering cannon. Our national anthems, with few exceptions, are hymns of hate and ~~are~~ hopelessly intertwined with patriotism, self-righteousness and glory. And even if some have outgrown this fantasy, there lingers in nearly all, the assumption that most of what civilization has gained has been through war. This is what conventional and current history still in the main teaches; war won way for art ~~of~~ in Athens and ~~the~~ law ~~of~~ in Rome; war won the Renaissance and Reformation; war built England and rebuilt France; war freed the American colonies and freed the slave; war united Italy and Germany; in fine, war is the world's great weapon of progress.

It is true that this way psychosis is not universal, nor ~~that~~ its contradiction is unknown or untaught. But this contradiction is far from penetrating the mass of Americans as any reading of present school texts will show.

Yet all men should know how dirty, cruel, and horribly inconclusive a mess war is at best and how utterly indefensible at its worst. It is and must be primarily planned murder and maiming; dirt, theft, and rape; sweat, drunkenness and destruction; and utter losing of nearly all restraints of religion, morals, and decency. Wars are continually fought for objects vague or quite unknown to the fighters; or for aims changed while fighting or improvised to inspire lagging morale. The results of wars are ~~repeatedly~~ usually far from what they first aimed at or last dreamed.

Yet we have learned to think of war as indisolubly bound up with progress, absolutely inevitable, forever impossible of abolition, even when we know also how often war has proved the first resort of liars, aggressors,

5

thieves, and fools; and the last remedy for human ill.

Whatever excuse and justification for this attitude the past may have offered, has disappeared completely in the tragedy which faces us today. We must not only reassess in the light of critical and scientific history, the real place of war in civilization and begin to teach this interpretation in school and college; but first of all, we must seize the present threat of war as the day of all days and perhaps the last opportunity of civilized man, to save the world by outlawing war as an instrument of human progress.

The maddening fact, which frustrates the world today, is that the overwhelming majority of men, not only in the world and in Europe, but precisely in the bristling nations of the Soviet Union and the United States do not want war, do not believe that war will settle any essential aspect of matters in dispute, and yet are moving or being moved just as rapidly toward war as is humanly possible.

49-2-233

Here, if anywhere, or if ever, comes clarion call for common sense to override army, air force, and navy; blind members of the legislative branches of the government, and stubborn executives; and urge for reasonable people to take charge of the two nations. Out with double-talk and with such mystics as the young American ~~liberal~~ clergyman who staged a mumbo-jumbo tryst of prayer for peace and then refused to join a peace congress because forsooth he suspected communists might attend! Out with Russians who will not believe that most America praises what the Soviets have done to raise the working people of Russia; sternly putting the intransigeants aside ~~aside~~ and refusing to look for guidance in a propagandist press, let us face facts and acts accordingly.

What are the issues in dispute between the Soviet Union and the United States?

1. The USSR believes that the United States wishes by armed force to suppress communism, not only in the Soviet Union but elsewhere in the world.

2. That the United States is working to spread her control of labor and materials through the world by force.

3. That for these reasons the United States deliberately misrepresents conditions in the USSR and seeks on the basis of these alleged facts to stir up attack on the USSR from without and within.

The United States believes:

1. That communism is a failure and has erected in the USSR a police state with slave labor and restricted liberties.

2. That the USSR has forced communism on her bordering states and the Balkans and indirectly on China; that only fear of the United States army has saved Greece and Turkey and that the USSR is now threatening Asia and Africa.

3. That the Soviets through local communist parties, maintain fifth columns in all countries possible in order to subvert their economics and culture; and that these parties are directed and financed by the USSR.

In this dispute it should be easy for both parties to agree:

1. That military force or threat of force to dictate the way of life in another nation with regard to its economic or social institutions is inadmissable.

2. That criticism of conditions anywhere in the world, which anybody thinks is detrimental to human progress is rightly the concern of all men. Investigation, comment, and criticism should be encouraged, if carried out with reasonable courtesy, sympathy, and honesty of purpose and without irritating condescension of some folk toward foreigners. Deliberate liars and scandalmongers cannot expect international welcome, but the time has come for wide encouragement of criticism and visiting among nations.

3. It is everywhere conceded that the economic status of human beings today is unsatisfactory over large areas and among the majority of folk in all nations. All lands agree in the necessity of radical reform but disagree widely on method and ideal. Recognizing this world-wide situation, charity and unbiased judgment of efforts at reform are called for, with strict refusal of all effort to use force or threat of force in directing the business of any people save our own.

4. That the right of people anywhere to follow their own line of thought and action, in accord with the thought of any nation is sacred so far as there is no attempt to transgress the law; in that case the men should be punished for illegal action and not for unpopular opinion.

It is difficult to see why some such basis of agreement might not be reached by leaders of thought in the United States and the Soviet Union without invading in any degree the right of either nation to pursue its own way at home and abroad. The American Friends Service Committee after careful inquiry has expressed its conviction that peace is possible for the following reasons:

1. The fact that there is widespread and sincere desire for peace.

2. The conviction that both the Soviet social organization and the type of social organization prevailing in the western world are likely to persist for some time and that attention should be directed to their coexistence, rather than to the victory of either over the other.

3. The conclusion, that while there are drastic differences in the methods of the two systems and some differences in their aims, both systems attempt to promote the general welfare, while defining it differently.

4. The belief that there is the possibility of sufficient accommodation between the two systems, as evidenced by changes that have occurred in both, to permit them to coexist and to compete peacefully in the same world.

5. The probability that much of the present tension between the United States and the Soviet Union reflects the mutual fear felt by each of attack by the other.

6. The improbability of overcoming this fear and attaining either the impression or the fact of security by arms competition.

7. The desirability of reducing armaments and the reliance on the military weapons before the burdens of an arms competition weakened democratic institutions.

8. The likelihood that neither the United States nor the Soviet Union intends at the present time to promote its foreign policy by means of direct military aggression.

Upon such agreement might come disarmament, including the atom bomb; the progressive freeing of trade between nations, whether the traders be individuals or states; and the final ridding of the world of all vestiges

49-2-235

of colonialism, whether through political control or investment; and a new and generous rivalry among nations to find the best ways of human progress and freely invite criticism and exchange knowledge.

Already the world movement for peace is much further advanced than most Americans realize. I have spoken of the peace meetings in New York in March, 1949, and in August, 1949, in Moscow, and I was due at the Congress in Mexico the same month; but the greatest came in Paris, in May, 1949.

This seemed to me the greatest meeting of men ever assembled in modern times to advance the progress of all men. The Races Congress of 1911 in London was comparable, but was quickly forgotten in the onset of the First World War. The first meeting of the Assembly of the League of Nations in that little Geneva church, raised hopes of universal significance, despite the fatal absence of the United States. The United Nations Organization at San Francisco, after the Second World War, lifted the hearts of men, until the long, drawnout horse-trading on trusteeships revealed the determination to hold in serfdom the majority of men.

The Paris outpouring was extraordinary; not simply because of the heart-breaking preliminary preparation which brought together 2,192 delegates from seventy-two countries, representing 600,000,000 people; and with 213 delegates from thirteen other lands, meeting in Prague; but because of the single-hearted earnestness, the deep determination, the unflagging interest which kept 3,000 persons fastened to their seats for eleven sessions covering five full days and a sixth day devoted to the most impressive mass demonstration I ever saw.

Add to this, the so impressive fact to me, that the colored world was present; not simply on sufferance; not with the well-known Anglo-Saxon condescension; but as members of a world movement in full right and with full participation. I sat on the Presidential Tribune, representing the United States. I looked out across the sea of faces hour after hour and saw seven

Haitians; 27 from India; two from Indonesia; 12 from Madagascar; four from Morocco; three from Mongolia; five from Puerto Rico; 18 from Tunis; 60 from Viet-Nam, and 18 from black French Africa. There were other colored folk from France itself, from Cuba, Central and South America, and two from the United States.

And these colored folk took part. At two sessions, black men presided. One of the very best speeches was delivered on Thursday by Gabriel d'Arboussier, Vice President of the African Democratic Rally, for whom the audience rose to applaud. Paul Robeson appeared unannounced on Wednesday, and was given a tumultous ovation when he dared to say that no Negro should ever fight against Russia. Madam Thai Thi Lien spoke for Viet Nam, with long applause following her discourse. On the World Committee, elected by the Congress, was a black African vice chairman, and among the 140 members, 13 were colored.

To all this, should be added the colored contingent of the Prague Congress, those delegates refused visas to enter France. Foremost, of course, among these were the forty delegates from China and eight from Korea.

The Manifesto of the World Congress faced definitely the colonial question and the color question: "We are against colonialism, which continually breeds armed conflicts and threatens to play a decisive part in unleashing a new World War."

"We condemn...the fostering of race hatred and enmity among peoples." But it was no mere matter of race and color. It was the suffering of a crucified world made visible. I saw that tall, white-haired Russian woman with a face like the mother of Jesus, stand and tell how her eighteen-year old daughter went to war to defend ~~American~~ "democracy;" how she was stripped by the Nazis and driven naked into the winter cold, beaten with straps and hanged, yet never betrayed her comrades. Madame Kosmodemianskaia did not sob. She paused and swallowed, as she went on to tell of her sixteen-year old son, who

49-2-232

followed his sister to death. A few nights later, in the home of a woman deputy of the French Parliament, I sat beside a beautiful young woman, almost youthful save for tired lines that dimly crossed her face. I looked down and on her wrist saw the concentration camp numbers burned into her flesh. She said simply, "I lost my mother and father; my brother and -- my husband."

In the Congress and out, I saw the crippled and maimed -- one soldier with no legs talked to us. I visioned the poverty, the hurt, the misery of a world crying, for God's sake let us at least have Peace, to heal our wounds. I sensed the bitter hatred toward an America determined to make money out of the world's misery. Tractors of French make wheeled before us May Day, labelled, "We cannot make these; we must buy them from America." I saw the leather workers unemployed, because their leather was sent to Germany.

Above all, this, looms in my memory that spectacle of Sunday, ~~April, 1934~~, when from all of France and half the world, 500,000 persons filed through the Buffalo stadium; a hundred thousand at a time filed out to let another hundred thousand in. I never saw before a hundred thousand human beings in one group. And they were not strutting and showing off. They were walking and hobbling and falling in faintness and crying, Peace! Peace! It was unforgettable. No lying, distortion and twisting of the American press can conceal or erase the heartbreaking significance of this spectacle. None who saw it will ever forget.

On the tribune sat Joliet-Curie, Aragon, Picasso, Nickolas, the Metropliitan of the Russian Church, the fearless Jesuit Abbe Boulier, whose desperate desire to come to America and tell us that all Catholics were not reactionary, was vetoed by Cardinal Spellman; the Bishop of the Calvinist Church of Hungary; the Red Dean of Canterbury; Zilliacus of England, Howard Fast of America, Fadeev of Russia, and Hamzah of Indonesia spoke. Children sang, men and women shouted and wept, and the Marseillaise roared.

32-2-47

When I was invited to this meeting, I did not ask nor care who organized or called. I was all the happier when I realized that communism was back of this undertaking. To this day I cannot understand why persons who want peace with Russia, recoil when Russia wants peace. This almost seems as though we feared that the Soviet did not want war. The explanation that we fear they are not sincere and want war, not peace, is so easily capable of proof: Will they, beside us, take steps toward peace? Certainly every word said at Paris indicated this:

> We are for the Charter of the United Nations and against military alliances that make the Charter a dead letter and lead to war.
>
> We are against the crushing burden of military expenditures that reduce the peoples to poverty.
>
> We are for the prohibition of atomic and other means of mass destruction, the limitation of the armed forces of the great powers, and the establishment of an effective system of international control to make certain that atomic energy is utilized exclusively for peaceful purposes and the good of mankind.
>
> We are protagonists of national independence and peaceful cooperation of all peoples, and of the right of national self-determination, as essential conditions of freedom and peace.
>
> We take a firm stand against policies which feverishly seek to curtail and suppress democratic freedoms in order to pave the way to war.
>
> We are the world front for the defense of truth and reason, for the defeat of propaganda which prepares public opinion for war.
>
> We condemn war hysteria and the fostering of race hatred and enmity among peoples. We advocate the denunciation and boycott of those periodicals, books, films, individuals, and organizations which are engaged in war propaganda.

In the face of these words, the one obstacle to understanding is the reiterated charge that the Soviet Union will not outlaw the atom bomb and has obstructed the work of the United Nations and repeatedly broken her plighted word. I cannot see that a single one of these charges is true. We invented the atom bomb. We are the only nation in the world which has

49-2-239

ever used this bomb in war; we began the stockpiling of the bomb for future warfare; and our national reputation for telling the truth is certainly no better than Russia's.

And finally, our proposal for international control was not an offer to consult, but a blunt "take it or leave it," arrogantly given and since followed by refusal even to consider other terms. The Baruch plan of June, 1946, proposed to hand over the ownership and control of all atomic plants to an international commission, on which at present and probably for a long time to come, the United States and its friends would have a clear majority of votes. The United States would have the right to retain its stockpile of bombs as long as it thought best, after the commission started work; and the veto which any of the Five Great Powers have over Security Council action would not apply to the work of this commission. This was a proposal which the Soviet Union could not and was not expected to accept. The Russians in return proposed to outlaw the bomb, destruction of all existing bombs, and the prevention of the manufacture of new bombs; and then, to make provision for control of atomic energy with limited international inspection and with maintenance of the veto power.

So long as the United States had the monopoly of the atom bomb, we had a pistol aimed at the head of every nation in the world and could set our own terms of international control. It was not a position calculated to reassure peoples, doubtful of the purity of our motives; but it was a bleak fact. When, however, in 1949 it was revealed that the Soviet Union had the secret of the atom bomb, the situation changed. Evidently the world must disarm or go bankrupt or infinitely worse than either, go to war. For this the recent session of the World Peace Committee at Stockholm, 1949, proposes:

> Nous exigeons l'interdiction absolue de l'arme atomique, arme d'epouvante et d'extermination massive des populations.
>
> Nous exigeons l'establissement d'un rigoreux controle international pour assurer l'application de cette measure d'interdiction.

We call for the absolute banning of atomic weapons and of all terror weapons of mass destruction.

We call for the establishment of strict international control to insure that this ban is rigorously observed.

We declare that any government which first uses atomic weapons against no matter which other country, shall be branded as guilty of a crime against humanity and shall be treated as a war criminal.

042-2-64

Nous considerons que le gouvernement qui, le premier, utiliserait, contre n'importe quel pays, l'arme atomique, commettrait un crime contre l'humanite, et serait a traiter comme criminel de guerre.

Nous appelons tous les hommes de bonna volonte, dans le monde a signer cet appel.

Vishinsky emphasized at Lake Success in November, 1949, the efforts made for peace in the Soviet Union: "The Soviet Union policy is a policy of peace. The Soviet Union stands for peace and consistently and determinedly defends the cause of peace. It struggles against those who want to violate peace and foist a new war on the nations of the world."

He recounted the entrance of the Soviets into the League of Nations in 1934, and their efforts for peace in 1935; the peace treaties with France, Czechoslovakia, and China during the period 1935-1937; and her signing of the treaties at Yalta, Teheran, and Potsdam:

"The Soviet Union proposals for the general regulation and reduction of armaments...for the prohibition of atomic weapons...for the condemnation of propaganda in any form for a new war...for the reduction by the Five Powers by one-third of their armies and armed forces, all these proposals submitted by the Soviet Union in 1946, 1947, 1948, and finally, 1949, serve one purpose, to strengthen the peace and to insure the security of nations."

One of the most persistent arguments against Soviet Peace efforts is the existence of Communist parties in various countries of the world under the control of Moscow. Outside the 10,000,000 Communists in the Soviet Union and China, there are in the communist nations of Poland, Hungary, Bulgaria, Rumania, and Czechoslovakia, perhaps 6,000,000 party members. In Western Europe, there are in Italy, 2500,000; France has 800,000 members, and elsewhere there is possibly 2,000,000 or more in Europe, Asia, Africa, and America. It is charged that these parties, outside communist countries, are fifth columns for Moscow and centers of conspiracy and violence. Against this charge is the obvious fact that these parties

49-242

are composed of native citizens and not of Russians; that these citizens of France, Italy, the United States are presumably persons capable of thinking for themselves and not simply puppets of a foreign country; and, finally, it has become lately customary to accuse Communists and the Soviets for all opposition, all strikes, all violence which may happen among the underpaid workers of France, the starving peasants of Italy, the strikers of the United States, and anyone anywhere who is dissatisfied with local conditions.

That communist parties follow the main lines of argument and action dominant in the Soviet Union is as probable as that the rightest parties of most lands follow the line of investment, colonial control, and protection of private property prevalent in Great Britain and the United States. That Communist parties outside of Russia follow the Soviet "line" is natural; since the Soviet Union is the greatest experiment in socialism ever attempted; that a change in that line should be followed by corresponding change in foreign nations is conceivable. Who in the world did not change ideas and judgments when Russia and Germany made alliance, and then two years later made war? Was it proof of treason that the Communist Party in the United States reversed many of its policies in these years, or proof of common sense?

40-2-243

International exchange of ideas and policies; international action through parliamentary unions, health and sanitary programs and even socialist internationals have long been countenanced. If at any time anywhere these organizations transgress the laws of a country, they are justly liable to punishment of suppression. And any individual is always amenable to law. But hitherto in the civilized world, thought has ~~been~~ sought free; speech within reasonable limits has been free. It is monstrous for any civilized land to silence or jail people for what they believe, regardless of what they do. This is not democracy. It is tyranny.

After all, this is true, as the great Harold Laski said a few months

before his untimely death: "Without patience and understanding the stage is set for a third world war; and at its close there would be tyranny everywhere. If some critics say they do not desire accommodation with Communist Russia but would prefer to fight it out, my reply is simply that they are enemies of the human race. If they complain that accommodation means 'appeasement' and that we gained nothing from the appeasement of Hitler, there is, I think, a decisive reply. On the evidence, the supreme objective of Hitler was the domination of the world by the Nazi state, and to this end the German people were his first and hapless victims; above all, those Germans who were of Jewish birth or descent. Hitler sought, of set purpose, to drive a cultivated people into an ignorance which should be the parent of their permanent blind obedience. On the evidence, I believe no such charge can be made against Soviet Russia."

In illustration of what I have said and believe, may I end this book with a creed for the United States of America in the meridian of the Twentieth Century:

The American people want Peace. They want neither to conquer the world nor police it. They have no desire to meddle in other people's affairs, or censor their thought or control their industry. They want to spend the billions now wasting in war on human education and uplift for all men.

We ask the United Nations to remember that their main object and reason for being is Peace and to this end, we need wider cooperation, greater faith in each other, mutual disarmament and effort to achieve World Government with freedom, autonomy and abundance for all peoples.

We are threatened by no nation. There is no disagreement between us and the Soviet Union, which Force can settle, or which conference cannot resolve.

We are blood-guilty in first and unnecessarily using the frightful atom bomb to kill women and children; in refusing now to outlaw the weapon, save

44-3-244

on our own narrow terms; in curtailing its peacetime use, surrendering this use largely to monopoly; and in planning even more frightful weapons.

We believe in the self-determination of all peoples regardless of color, race, belief, or political philosophy. We congratulate China on achieving rule of the people and demand her recognition with refusal of further aid or recognition to Chiang Kai-shek and his kind.

Especially do we demand the abolition of the colonial system and freedom from its tentacles of all present peoples who suffer from control by foreign masters. We see in this system endless cause of war, poverty, ignorance and disease. We must not build high profit and high wage in Europe and the United States on poverty and starvation in Asia, Africa, Central and South America, and the beautiful, raped islands of the Seven Seas.

We demand that the Marshall Plan be confined to restoring the economy of the victims of war and not used for land monopoly, industrial investment, and thought control. We must buy as much as we sell and stop hoarding food in a starving world to maintain profits. We repudiate the Truman Doctrine wherever it supports oligarchy and reaction as in Greece, Indo-China, and Korea.

Not by might nor by power of far-flung armies, navies, and aircraft can we help the world, but by sacrifice and example; we gain little by boasting of a democracy which we do not practice, or of riches and comfort which at least a third of our population do not share. We are ruled today by corporate wealth; and blessed as we are in natural resources, never before have so few owned so much at the expense of so many. Public welfare must replace private profit, and planned economy must bring order and justice out of the anarchy of Free Enterprise and Private Initiative. No pauper is free, no public service can be private, and the sick and ignorant cannot initiate enterprise.

We demand control of industry, public ownership of banking, transport

49-3-345

and communications, of mines and oil wells, of all government subsidized industry, and of all business which needs for proper functioning, police power and use of public property.

We demand limitation and such control of income, rents, profits, and prices as is necessary to insure a decent standard of living and to curb excessive personal wealth; and we ask a tax structure calculated to achieve these ends by stopping tax exemption for the greedy and decreasing the tax burden of the needy.

We demand immediate suppression of attempts at thought control by congressional committees, secret police methods as used by the Federal Bureau of Investigation, and witch-hunting by officials and the press. Communists, Catholics, and Pacifists have the same right to think, to vote, and to act within the law as other Americans; and injustice in the courts must not be used to punish freedom of belief and legal defense of accused persons.

We demand for every American citizen, no matter what his color, race, or belief, the right to vote and hold office; the right to live where other people live and on the same conditions; the right to work according to ability and income according to accomplishment; the right to move without segregation and to receive education and other public benefits without discrimination. This means fair employment legislation and laws against lynching and the poll tax.

The foundations of our democracy rest on free and equal elections. We should stop rewarding disfranchisement in sections like the South by giving 7,000 votes in South Carolina as much power as 70,000 in Michigan, and consequent committee chairmanships and rights to filibuster. Representation should be based on votes cast. Only in this way can the democratic weapon of the Third Party be able to oust corruption, connivance, and reaction.

We demand federal aid to education without segregation or discrimination by race, color, or belief, and we believe that education is the function

of the State and not of the Church.

We defend the right of working people to organize and bargain, whether in public or private employ, and resent the use of court injunctions to limit this right. We demand of labor unions freedom of admission to their ranks for competitive workers, of every race and color and of any shade of political opinion.

We call for increased government control of land ownership and use; for socialized medicine to protect the public health; for abolition of slums, and for publicly subsidized housing on a nation-wide scale; for unemployment relief, sickness and old age security on levels sufficient for decent life; for the protection and subsidization of workers in any essential industry like farming which has suffered from present organization of industry; we believe in the encouragement of all forms of self-help, like consumers cooperation.

We have come out of war a frightened, suspicious, money-made people, without Love, Faith, or Hope and with our charity married to profit. We must cease to make science the prisoner of Big Business, government the slave of the army, religion the leader of war, and education the plaything of propaganda.

And finally and above all, let us restore the freedom of our press and rescue it from monopoly and greed and make it again the purveyor of Truth and the Forum of Ideas.

Americans, Russians: In a third World War, whoever wins, will lose; what any nation gains, the world will pay for; world conquest through force, means the death of civilization for a thousand years.

49-2-294

LET liars fear, let cowards shrink,

Let traitors turn away,

Whatever we have dared to think

That dafe we also say

RUSSIA AND AMERICA: AN INTERPRETATION

Incomplete draft manuscript

(2 Carbons)

THE APOLOGY

Three times during the last quarter century I have had glimpses of the Union of Soviet Socialist Republics. For more than four-fifths of the last ~~century~~ hundred years I have lived in the United States of America. In 1926, for a month or more, I saw Moscow and the other chief cities of the Soviets from Leningrad to Kiev, and from Nijni Novgorod to Odessa. Ten years later in circling the earth I saw the Soviet Union from Moscow to Manchuria, over Omsk, Novosibirsk and Lake Baikal and thence to China and Japan. A third time in 1949, amid the twenty-eight marble pillars of the former Hall of Nobles in Moscow, I looked into the faces of a thousand Russians from every part of the vast nation, and joined them in a plea for peace. Then I said, I must write a book. I read the books of others. ~~I~~ wrote So this at last is the book I have written. And may men have mercy on my ~~soul~~ word.

W. E. B. Du Bois

New York

On a day in June, 1950

35-4241

CHAPTER III

Sitting in Moscow on my arrival August 28, 1926, I was reading the New York Times; it said "Revoluti n has broken out in Cronstadt. Streets are flowing with blood!" I stared in astonishment, for the issue was dated the very day I had landed in Cronstadt. One can know who Cronstad looked when I landed by reading page . The dispatch was dated from Riga. That explained much. Riga had long been a nest of liars who poured fairy tales about Russia into the West. But how could the Times be misled into printing this story without confirmation? I went back in my own mind to what I had known abo t Russia since the Revolution and remembered that I was astonished to learn how long the war had lasted in Russia after the Armistice. Leaving Russia in October 1926, I tried after my return to America to collect and organize my knowledge. I read neglected books and reports. The result was amazing. I presume in all our knowledge something like this takes place: save in some narrow file we know events and situations vaguely, from newspapers, magazines or a book or so. But soon we are making judgments and coming to conclusions not on a basis of carefully garnered knowledge, but on flimsy generalizations influenced tremendously by current public opinion. Thus we tend to learn our history backwards.

42-18-61

I had known that Czarist Russia naturally resisted the revolution. But of the extent of that counter-revolution and of the active help in manpower, supplied and arms; supplied by the civilized world; of the spying and intrigue from all Europe which had accompanied and inspired this war of reaction, I had but the vaguest information. Indeed I did not learn the whole story until Sayers and Kahn published their "Great Conspiracy" in 1946.

What happened in Russia during the 20th century? This vast land, one-sicth of the golobe stood at the threshhold of the new century a miserable

travesty of government and culture. Long revolutionary revolt had shaken the land from Pugachov's rebillion in the 18th century to the Decembrists of 1825, the Nihilism of 1860 and the Narodinks of 1870. Now it was jolted to new life by the industrialasition of Russia in the late 19th century with French, Belgian and British capital. On the right stood the nobility and high clergy; in the middle were the bourgeoisie and at the left were the Social Democrats. Left of the Left came the Marxists, led by Lenin.

42-18-62

Three men led the Russian Revolution: Vladimir Ilich Ulyanov, known as Nikolay Lenin, 1870 -1924, a social scientist, planned it. He was son of a school inspector and of the daughter of a small landowner, and was born in Simbirsk now Ulyanovsk east Central Russia. Joseph Vissarionovich Djugashvili, Known as Joseph Stalin, 1879---carried Lenin's palns into execution. He was the son of a shoemaker and grandson of a Georgian slave and knew the workers of the Russian Caucasus had their problems, because he was one of them.

Lev Davidovich Bronstein, known as Leon Trotsky, 1879-1940, was the brilliant idealist and egotist of revolution who inspired and betrayed Russia. He was born of well-to-do Jews, about a hundred miles from Odessa.

There were many other gifted leaders, like Kamenev, Bukharin and Zinoviev, but these were the outstanding leaders. Lenin was the man of wide reading and sound learning, who took the Marxian theory of socialism and by long scientific experimentation of trial and error adapted it to living and working human be ngs. Stalin was the slow, cautious but keen executive, not highly trained in theory but a man who knew the common laboring masses of many races, religions and classes; who took the theory of his leader, Lenin and translated it into reality, with grim steadfastness, self-effacing sacrifice and unswerving determination.

Trotsky was the brilliant propagandist, the dreamer of dreams; both patriot and demagogue, who in the stress of battle and the trial of endurance could not distinguish between his own ambition and the sacrifice demanded by principle. He organized the Red army and then nearly sold his fatherland to Germany and betrayed his fellowsworkers to world capitalism.

42-18-63

Lenin the leader, and one of the greatest men of this century was, as I have said, a social scientist; that is a man who believed that the actions of human beings were subject to natural law and that this law could be discovered and stated and its action measured. Others like Comte had forecaste a Cociology to develope along with Physics and Biology, but practical reformers and religion balked. A real science of human action would impinge on Freedom of the Will; it would contradict moral responsibility and acts of God; it was "materialistic."

But Lenin was not the sort of modern Sociologist, who boasted of his science, but did nothing to discover its laws. What laws govern human action, Lenin did not know nor pretend to know. But following Karl Marx he saw the rhythm of history and determined to plan human life in accord with known knowledge and on such scientific hypotheses as he found would work. He stood ready and eager to revise and restate in the light of experience any hypothesis or theory he might hold. He therefore studied not only the written world of history and economics, but the actual deeds of living men. He knew the lives of the mass of human beings; he admitted that much men did seemed entirely spontaneous, unconditioned and a matter of chance. But he was determined at least to measure the limits of this Chance and, beyond those limits, if limits there were, to plan the actual life of Man. It was this pragmatic approach to human action, either in government or revolution, that set Lenin apart from and above his followers and contemporaries and explained his life.

42-18-64

While a student he became suspect and between his 23rd and 30th year spent 5 years in exile in Siberia. Afterward he went to Western Europe to study and help organize a Russian Socialist Party. Real revolution was planned by Lenin in the All-Russian Congress of Social Democrats in Brussels and London in the Summer of 1903. Here Lenin tried to form a close knit organization to direct revolution. The attampt resulted in division into Mensheviki and Bolsheviki the right and left of the revolution--the idea of liberal labor, led by the intelligentsia; and that of close-knit core of organized leaders. Lenin was overborne and spent two years in Switzerland, returning to Russian late in 1905.

Meantime far in the East the man afterward called Stalin, grandson of a slave serf, was working among the laborers of Baku. Afterward the British trade unionists described how those workers lived.

"During the investigation of the oil fields of Baku we were amazed and disgusted with the conditions of housing the workers whoih had formerly existed under private control. The living places were not huts; to attempt to dignify them with the name of houses would be wrong, and the nearest description we can give is the out-houses one finds in the worst slum areas at home. Long rows of dimly lighted buildings, one story high, with small windeos and ~~ewn~~-built doorways, and in some cases no flooring but the earth. In these hovels hordes of people of various nationalities had been housed under such conditions that would subject the owner of cattle in our own country to prosecution for cruelty if he kept his animals in a similar state. We have no hesitation in saying that these conditions of housing the people were the vilest and worst we have seen in Russia or in any p rts of the world known to any of the Delegation. When we remembe ed that the output of oil from this district can be counted in hundreds of millions of poods and that

mil ionaires have been created in abundance from these oil fields, our indignation and disgust at the treatment of the workers was unlimited."

42-18-65

Stalin was inconspicuous, cautious and taciturn. He was expelled from the theological seminar which he had entered, and found work as a clerk. He became a socialist leader among the oil laborers of the Caucasus, inspired demonstrations and strikes, wrote leaflets and contributed to socialist papers. He was not quick nor brilliant; he was more than that--slow and tireless. He saw the oppression of Poles, Finns, Jes, Georgians, and religious sects. He followed the plans of Lenin as technical executive not mere propagandist, working down on the gathering of hard facts. He sought methods of action to implement revolution. By 1901, at the age of 22 he was organising the workers in the oil works owned by the Rothchild interests, and was arrested and spent three years in prison.

Stalin escaped from Siberia in the turmoil marking the opening of the Russo-Japanese war and went back to the Caucasus, where he helped in the oil workers strike of December 1904, which anticipated the Petersburg Revolt of 1905 and resulted in the first collective agreement between workers and employers ever signed in Russia. The Czarists let the Black Hundred loose on Socialists and Jews and soon had the Caucasus writhing in interracial feuds. Here Stalin learned his great and never to be forgotten lesson of the dangers of race hate, which stood him in good stead during the years when he was Commissar of Nationalities. Stalin wrote vigorously against the Czar and took the side of the Bolsheviks until his work came to the attention of Lenin. The two met in Finland in 1905. As the revolution began to fail, funds were lacking. These were furnished by the planning of Stalin who organized raids on public funds in the Caucasus which netted large sums. Over a thousand acts of terrorism were committed in 1905-6.

When Stalin met Lenin for the first time he was surprised to see this great man so small of stature and so modest.

The third member of the revolutionary triumverate, Leon Trotsky arose with the abortive Revolution of 1905. The crasy government of the Czar was riding to its doom. In 1904 it went to war with Japan and was on the way to defeat before the end of the year. Distress spread among the workers of Russia and in 1905, the workers of St. Petersburg, unarmed, led by a priest and carrying ikons marched to the Winter Palace of the Czar with an humble petition. The guards shot them down in cold blood. Angry revolt flamed; it was not planned revolut on, but sudden angry reaction: strikes spread; from Petersburg and Moscow to the whole country; a Grand Duke was assassinated; a battle ship mutinied and workers organizations, called Soviets began to spread. Railways stopped running.

42-18-66

The Petersburg Soviet became the spectacular center of the revolution and elected Leon Trotsky as its president. Trotsky had tried writing books and plays, and at 18 was sent to Siberia for leftist activity. He escaped in 1902 and went abroad, attending the London Conference in 1903 where he sided with the opponents of Lenin. When the Japansse defeated Russia he hurried back to Petersburg and led the Petersburg revolt. He was in his element; brilliant, fiery and daring he roused the workers to wild enthusiasm. They voted to pay no taxes to the government and the revolt reached its climax in an armed uprising in Moscow in June 1907.

Meantime the Czar wavered, granted civil liberties and a duma in 1905, arrested Trotsky in the same year; called and dissolved a second dx duma in 1907 and then put down the Moscow in a flood of blood. Lenin hurried back to this "general rehearsal."

But the attempted revolution failed and Lenin met Stalin for the first

time. He returned to Geneva in December, 1907, prepared to wait 20 years, "unless Czardom is shaken by a major war." Meantime reaction in Russia triumphed ---all four of the Dumas were dismissed by the Czar and most of the Socialist deputies sent to Siberia.

The following years Lenin described as the years of education for the wroking group. They learned not only to attack but to retreat. By 1912 the revolutionary forces began to revive, although Stalin was again sent to Siberia in 1913 (he spent 7 years there, 1907-17) and there heard of the outbreak of the First World War. But Trutsky fled to Vienna, Western Europe and finally to New York. He preached against Lenin and his ideas, but in 1917 returned to Russia and dramatically joined Lenin and the Bolsheviks.

42-18-67

Czarist Russia entered the First World War as a method of stopping revolution, but it succeeded in revealing the utter incompetency of the government. By 1916 the nation was prostrate and the Czar abdicated in 1917. After a vain attempt of the provisional government to rule, the Revolution of October, 1917, put the power in the hands of Lenin.

What happened? The Bolsheviks, now become the Communist Party seized power and established order and made peace with Germany at the cost of much territory, but at the insistence of Lenin who knew there was no alternative. Then in 1918, Banks, insurance, mines and railways were nationalised; foreign debts repudiated, foreign investments confiscated and foreign trade made a state monoploy. Immediately the World attacked Russia, cooperiating with all the elements of reaction in the nation and the emigrants residing aborad.

Western Europe had transfe red to Russia as investment before 1905, certainly 10 billions, perhaps 20 billons of dollars worth of machinery, goods and technical services. It had in turn received back in processed

goods, food and materials and labor of all sorts, probably more than the orignial investment. It is undortunately impoßßible to know these facts accurately and with confidence, because the matter of investment and ownership of property is legally and by custom so largely concealed and secret. The figures above seem not far from true.

42-1B-68

When the czarist regime was overthrown, they feared to lose all of their rights of property and joined the Russian reactions to put down the Revo ution. But the Bolsheviks in various ways offered compromise. They were willing to re pay invested capital and loans at least in part, but unwilling to continue the system intact and guarantee future ownership and rate of profit.

Thereupon the West from 1917 to 1922 spent $1000 billions in war to suppress the Revolution. They financed armies, munitions, spies and brigands, besides actually invading Rus ia with 25,000 of their own troops and 70,000 Japanese; they and their Russian allies killed seven million Russian people and inflicted on them damage amounting to sixty billions of dollars. Whatever plans the Russians had to build a new sort of economic world was held back for ten years. This story does not make sense. Indeed it is guage of our modern inability or unwillingness to reason.

Consider what happened in those fatal years, from 1917 to 1926. The Petrograd garrison revolted, the Kornilov putsch backed by Britain failed and Kerensky fled. France and Britain made treaty to dismember Russia. During the nest two years 14 nations invaded Russia led by Yudenitsch in the North, Denikin in the South, Kolschak in the East and Pilsudsky from Poland. As price for peace the Germand demanced Finland, the Ukraine, Poland and the Caucasus together with idemnity. Lenin frantically appealed to Britain and the United States, but got no answer. Finally he accepted the treaty while we called the Russians "Butchers, assassins, madmen, scum,

42-18-69

beasts!" The Russian-born British spy Reilly, began his career in 1918 which lasts u til his death in 1925. Rebellious Czech soldiers are enlisted by the Allies against Russia and raid along the Trans-Siberian railroad. In 1918, Kolchak proclaims himself "Supreme ruler of Russia", supported by the United States, France and Britain. He rages with murder and cruelty even as the Armistice is signed ending war in the West. But the Russian Bear at bay roped and bloody, turns and sinks in its claws. In a year Kolchak, loaded with a billion rubles in loot is in full flight; but Denikin and Wrangel attack from the East and capture Stalingrad and rush to a point only 120 miles of Moscow. The world press sees the Bolsheviks wiped out. So UYudenich simultaneously attacks Petrograd.. Three months later Denikin driven back desserts his army to flee on a French warship, protected by the shells of the British fleet. In the extreme North, 18,000 British troops, 5000 Americans, 1800 French, 1200 Italians, 1000 Serbs and 20,000 white Russians quarrel, parade and mutiny. When the Americans hesitated to mutiny, the British jeered "The Yanks are running, the Yanks are running everywhere."

The Torgprom, Russian nobles and European millionaires, including the founder of the Nobel prises and rich exploiters from all the world met in 1920, to stem the tide and systematically finance and guide the re-conquest of Russia, but the Russians conquer Wrangel, shoot Kolchak and drive Yudenich to Paris. The Poles with $50 million loaned by the United States and war supplies from the French and British join the attack, are driven back to Warsaw, but with new help of the Allies rally and take Western White Russia and the Ukraine from the Russians by the Peace of Riga. The Allies are encouraged, and the Japanese come to the rescue with an army in the Far East. Ungern-Sternberg, a medieaval despot leads a war of rape, murder and robbery; but by September his army has fled to China and he has been shot.

The Japanese withdrew.

"The Russian Revolution, after revolving to the left with great rapidity, reached its noon-tide in the War Communism of 1920, and since then has been returning by the right through a series of very complicated compromises. Of these compromises, one of the most interesting, and possibly the most instructive for other States of federal structure, is the combination of nationalism, and internationalism, of central authority and local autonomy, achieved in the Union constitution." (British Trade Union Report, 1925)

All this was made possible by the new Red Army, which the fiery Trotsky inspired and led, if he was not the actual creator of the invincible force which saved Russia. It is possible at the time Trotsky's personality and showmanship was even more valuable than military genius. By 1920, Russia was saved and her power consolidated. Within she was federalized into a Union of Soviet Republics; without the white armies were throughly beaten.

42-18-70

But the World Revolution did not materialize. Even Lenin had doubted if a single agricultural state could stand alone in an industrial world: and Trotsky had insisted that the Russian Revolution was only prelude to European uprising. Only Stalin, slowly but with ear to ground came to believe that Russia not only could but must prepare long to stand alone in a capitalist world.

The revolutionary Russain state, writhing like a wounded animal, with apparently no friend in a world which had long asked for economic reform and social freedom, tried compromise and concession. But by 1920, there were settled in the west over two million Russians, representing largely its former wealth and culture, with entree to the best and most powerful social, political and financial circles of Poland, Germany, France and England.

Thye led a world-wide opposition to the Revolution; an opposition all the more powerful and pursuasive because it was based on real suffering and the sincere conviction that this blasphemous revolt against divine right was something so inherently hideous as to merit any kind of suppression. But now came a new enemy, famine, due to disorganization, drought and peasant revolt. It was a dark period, but Lenin's resourcefulness, came forward with the New Economic Policy in order to furnish necessary consumers goods. Trotsky called it surrender. But Lenin said it was onetatep backward in order to take two forward.

Lenin senses the international plot against this new experiment in the kind of socialistic state which the wiser world had dreamed and talked about for centuries but never attempted to realise on a really national scale. He tried to compromise with the economic imperialism of Western Europe and America. He never offered surrender of his fundamental aims as many of his collegues were willing to; but his New Economic Po icy of 1920, permitted restricted capitalism and foreign investment and some recognition of pre-war financial obligations.

12-18-71

The New Economic Policy did denationalise the conduct but not the control of industry. The nationalisation of industry had been, in f ct, much less complete than is generally assumed. "Workers' control," established November 14, 1917, was followed by confiscation of certain enterprises; but it was not until Ju e, 1918, that the large industries were nationalised. Small industries were still only dealt with specifically and sporadically. Communities where in 1920 enterprises employing more than five workers with machinery, or ten withour, were nationalised, and private property in small industry was legally abolished. This latest development was never generally realised, and was reversed by the New Economic Policy.

The New Economic Policy restored not only the fu damental right of private enterprise, but also re-erected on it's superstructure such as Trusts, Syndicates, and Banks. These were reproduced in Russia as State organizations operation on a self-gov rning and self-supporting basis. In orther words, Big Business and High Finance in Russia were both under direct Government Control, Composition with dominant capitalism and gradual socialization of wealth and industry the world over, with peace and reason was here possible. But the West was set on crushing the Revolution and not compromising with its aims. It began a campaign of secret conspiracy, with spying, bribery and incitement to inner revolt which seethed for 20 years and was finally curbed but not even then stopped, by the Great Depression and the Second World War.

42-113-72

The real and powerful anti-Russian opposition center was the Paris Torg-prom with unlimited funds, military advice from the chief staffs of Europe and advice of statesmen and conspirators of the first order. Centers for the training of former czarists officers and soldiers were established and financed in five European centers. In June, 1921, an international Anti-Soviet Conference was called in Germany, with Alfred Rosenberg of later Nazi fame in attendance. By 1923, the general staffs of Europe had laid down and approved plans for general European attack on Russia.

Meantime carefully organized spying on the Russian conditions with covert encouragement and organizing of internal revolt had begun. A brilliant British subject of Russian birth began work in 1918 and continued until 1935. He had helped organise the Torgprom and had not only become rich but counted men like Winston Churchill among his friends. He hated Russian Revolution with perfect hatred and worshiped the menory of Napoleon. He had tried unsecuccessfully to organise revolt in Russia in 1918, and then returned to London and Paris. He thought he saw his opportunity in 1923, and with his friend, Winston Churchill, tried to interest Lloyd George,

British premier. but Ll yd-George thought Russia already on its last lgs

Russia now begins to try diplomacy: she signs the Treaty of Rapallo with Germany for twenty years of peace; but by 1920 meantime 2 million of white Russians have migrated to Western Europe--to Germany, France and Poland, and were becoming nuclei around which the international plot against the Russian revolution was organizing.

Leon Trotsky was a brillaint Marxist, believeing in world revolution, following the Menscheviks and then joining the Bolsheviks and organizing the Red Army. But he was more than this and less. He was an egotistical poseur determined to rule or ruin. He led left opposition against Lenin and when in the fateful year of 1920, Lenin retreated from complete socialism to the "New Economic Policy" of allowing restricted capitalism, Trotsky jeered at him. But Lenin stood firm and Stalin was elected Secretary of the Communist Party and Trotsky's popularity began to wane. The Trotsky opposition with Radek, Bukharin, Kamenev, Zinoviev and Tukhachevsky now went underground and by 1923 was a secret conspiracy with codes, ciphers and printing presses. They made contact in Germany and beginning this year and lasting until 1930, Trotsky received 250,000 gold marks annually from the commander of the German Reichswehr to finance treason. Then to cap the climax, Lenin died January 2[illegible], 1924.

42-18-73

Before the Communist Party Congress of May, 1924, Trotsky demanded to be elected Lenin's successor. But the 748 dleegates of the Congress voted unaminously for Josef Stalin. Trotsky then organized all the malcontents and planned a secret army. Meantime the Torgprom in Paris was at work. Centers for training Czarist officers and soldiers were established in five or more European countires. An International Anti-Soviet Conference met in Bavaria in June 1921, with delegates from all over Europe, among them Alfred Rosenberg, of later Nazi fame. By 1923, the General Hoffman plan for

European military attack on Russia was matured and approved in principle by the General Staffs of Europe.

Then a British Intelligence agent, Sidney Reilly, who had been spying in Russia for Britain since 1918, becomes active again. He and Winston Churchill try to interest Lloyd-George in using the services of a Russian assassin revolutionary and Menshevik, Savinkov. Bu Lloyd-George thought Russia already on its last legs; "the worst is over." But Reilly encouraged by the death of Lenin sought to interest Europe in making Savinkov, "Dictator of Russia". He enlisted the cooperation of Sir Henry Deterding the oil king who had been buying up claims to Russian oil deposits. Reilly's plan changed Hoffman's to counter-revolution within Russia, helped by armed invasion. France and Britain were interested and Mussolini summoned Savinkov for an interview. Meantime in Russia, Trotsky and Kamenev in June 1924, had invited Savinkov to return to Russia. Soon with an Italian pas port Savinkov entered Russia to head an prising in the Caucasus, August 28, 1924 instigated by British oil interests. But August 29, the Soviets captured Savinkov and the uprising collapsed. Savinkov confessed and implicated Winston Chruchill. He was sent to prison and committed suicide in 1925.

42-18-74

Reilly was welcomed to the United States in the Fall of 1924 where he helped stop the proposed Soviet loan and met Henry Ford. Ford had already met Brasol, a White Russian who supplied him with the spurious "Protocols of the Wise Men of Zion" and started his Anti-Semitic crusade. Reilly cooperated with the Anti-Semites and Anti-Bolsheviks. He left the United States hurriedly in August 1925 to join in the conspiracy led by Trotsky in Russia. A meeting was planned in Finalnd and on September 28, Reilly and his confederates crossed into Russia. The Soviet authorities caught them and shot Reilly.

Britain had agreed to receive a Soviet ambassador on learning that he was conspiring with Trotsky. Trotsky went to Germany in 1925, after Reillys' death, ostensibly because of illness but in reality to confer with German leaders and plan for more systematic exchange of information. Returning to Russia he intensified his struggle with the government, but a referendum by the party, resulted in a vote of 740,000 to 4000 against Trotsky.

42-18-25

CHAPTER IV

BLIND STAGGERS

What amazed and uplifted me was to see a nation stoutly facing a problem which most other modern nations did not dare even to admit was problematic. Taking inspiration directly out of the mouths and dreams of the world's savants and prophets, who had inveighed against modern industrial methods; against the co-existence of progress and pvoerty; against slums and disease; this new Russia led by Lenin and inspired by Marx proposed to build a socialist state with production for use and not for privateprofit; with ownership of capital goods by the state and state control of public services including education and health. It was enough for me to see this might attempt even made. It might fail I knew, but its attempt seemed to me social progress and neither folishmess nor crime.

Russia became handicapped by 95% of illiteracy among her peasants and nearly as much among her working classes; by a religion led by a venial and largely immoral priesthood, dealing in superstition and deception, and rich with the land and loot of grovellingfollowers. Most of her industrial capital was owned by foreigners whose only interest was the 50 or 75% which they reaped from merciless exploitation. Her government had long been shot through with dishonesty and graft under dissolute nobles and fawning lackeys. Her punishment of crime and independent thought had long affronted the civilized world. Yet the best people of Europe and America seldom raised a finger of protest but fawned on Russian royalty and aristocracy, receiving them with open arms and loud sympathy when they were repudiated.

Now after this first glimpse of Russia I traveled home. I had made a great pilgrimage; the sort of journey of which one dreams. I had seen the Scheldt at Antwerp and the paintings of Rubens; I had seen the towers of Cologne, the Rhine and the Lorelei; I walked by the Rathhaus of Frankfort

and through the ThuringiaWald to the Wartburg of Luther; through Berlin and the Thiergarten. I had gone to the Baltic Sea, the Nevsky Prospeck and the Winter Palace; for the Red Flag had waved above the Kremlin, the slow boats had moved down the Volga and the Great Fair had opened at Nijni Vovgorod; down the Dnieper I had found the Black Sea. Thence slowly I saw in retrospect the Glory that was Greece and the Grandeur that was Rome--Constantinople, the Hellespont, Asia and the Parthenon; Corinth, Brindisi and Tarentum and the Bay of Naples with Vesuvius and Capri; then the Meditteraneum, Gibraltar, the Azores and the Statue of Liberty. Now I turned backward toward home Going I saw glimpses of the Glory that was Greece and the Grandeur that was Rome: the foundations of that European culture into which I was born--Foundations now in semi-ruin , to Talong the Bosphorus, villas of tarnished splendor and semi-tropical trees appear; they cluster and climb the hills to white and brown walled terraces. There comes a narrow passwith mighty towers and crenelated. The strait opens its beautiful arms and in the evening sun burst the domes and minerats of the city, Constantinople.

42-18-40

The city [redacted] and shines with six immense vast domes and sixteen minerets house on houses pile like fortress walls rise on the right and on the left Asia. I have never seen a city like Constantinople. It is magnificent and terrible. It is a microcosm of human life writing all its startling beauty and repulsive cruelty. The great sweep of its domes bulging toward Heaven, its hills, its rivers and seas, its crowded harbor and more crowded streets all give to its 2500 years of history a vividness and measuring which gatherings of men in millions possess.

I qualed before the city. I could get no idea of it. Its infinite winding streets were baffling. It was a great and unknown giant. Then I

went down to the Golden Horne and the teeming streets of Stambul and putting my shoes from my feet stood beneath the dome of Holy Wisdom. One hundred feet wide great curve sweeps above the immensity of the church and looms 170 feet above the soft carpeted floor. It is a singular and mighty thing--40 windows light it and the dome itself rests on four tremeddous archs. There are four vast pillows and arcades forming perhaps the most wonderful single building in the world. For 15 centuries this thing has risen, trembled, swayed and groaned and the golden light of its old and holy beauty. It is right for men in bared feet with out-streatched hands and moving mouths to touch their foreheads in its dust.

42-18-41

Other things I saw--a palace and guards of the Sultans', and the great bazaar, the square that was the Coloseum of Extrimus Sevens--and one wide look over all the burning beauty of Stamboul and Persia and Galatea to Scutari and the wild rocks of the Prinpipa of Wilson and Trotsky; the Golden Horn and the Bosphorus, the Propontis and away in the distance the shadow of the Hellespont. But all day the great golden aisle of Saint Wisdom screamed in my soul. I saw the Scarcophagous of Alexander the Great, and beyond Scutari where skilled slaves of European capital toil cheaply in quiet. Beyond them a city of the sleeping dead, high above the Golden Horn, beneath ancient cypresses. Yonder the 10,000 Greeks came to barter.

We passed through the Hellespont in starlight, the water dark silver, the sky a deepened blue, the land black and heavy; high Europe and wide Asia and across the cortege flew Hero and Leander, Xerxes and Mohammed, Lord Byron, the Turkish host and armies of Russia, England and France. Above us hung the ruins of Abydus.

42-18-42

Then came the night. The Bear, the Pleiades and the Milky Way shone joyously and lingeringly the day arose again on the Isle of Greece. Achilles and Patroclus lie in long last sleep. How well I remember stumbling through the mighty lines of Homer:

Menin aeide thea
Peleiado Achillaos!

Yonder hidden to the left sleeps Troy. Beyond is Olympus, garlanded with snow Lemnos comes on the right hiding Samothran and on the right too we leave Gallifole where 10,000 British boys were murdered in 1915; for nothing; murdered and died and stank by the blunder of Winston Churchill. Lesbos and Chios lie far on the left.

All this by faith I see beyond the old Aegean; but real in soft morning light looms golden Euboea and Andros. We are amid the Cyclades--but empty, empty, barren and dead to all the sweet song, the myriad tongues, the plying boats, the teeming trade of the past ---dead and why?

No land that lived and breathed like Greece and Lesser Asia need to die; but any nation that sins against the Holy Ghost must die if truth lives. We tread the Cyclades, pass Chios and before us lies Greece. Bare but beautiful rise the blighted hills and mountains of Attica in the morning sun. We swept toward Salamus and the Peireus to see the pale and deathless Parthenon peering through; to see the rose colored columns of the Temple of Jupiter and the Acropolis. It was all pitiful and forlorn in its torn and raped beauty; baked and burned and yet eternal in the perfection of the dream that built it. The theme was simple, and quiet in its restraint, yet bold in the grandeur which conceived it, on a hill amid mountains, with backdrop of seas and all about memories of Thebes and Thermopylea, Eleusis and Hymettus. The marble palace where Demosthenes talked stands rough like Paul; the Dyonysian theatre crouched low to listen to Aischylus, Euripedes and Sophocles.

Athens was a dead wraith of white dust, hot and sweltering; and through it poured refugees from war and Turkey. Tall black mountains grimly escorted us through the canal and into the Gulf of Corinth; by the heaped mass of the Peloponessus, with Platea and Mycene and other mighty names all about us. The night bell tolled for Ithaca and with morning, came Italy.

It had been 33 years since I had seen this land; again I glimpsed beautiful faces and white towns as we sped by Brindisi, saw sea and Appenines and came to the Bay of Naples. Vesuvius wore the wreath of smoke but gone was the gayety and lazy laughter of Santa Lucia. I was whisked to a fashionable suburb and tucked into a "Grnad" hotel at fabulous rates. The trains were "running on time" and the beefsteak was English; but in the little day I stayed I searched in vain for the old, care-fre, dirty, jolly Naples; in its place the world was marching in uniform: officers strutting, soldiers quick-stepping, even boys parading. The Farnese Hercules was still there and the room of Titians; Vesuvius burned with its eternal fires. I saw Capri hiding beneath a broken-backed rock; in the rock is a hole; in the hole the sea blazes blue; writhes and seethes and blazes blue.

42-IB-43

And now it is done. The blue sun set is dropping towa d a sea of molten lead. Capri rises black and cloudy sharply limned against the Sorento green and gold shines with the soft sheen of evening. A sullen rock with a cross which was not meant. Castles old and high, perch on its edge of heaven; ships with silver sails go reverently home.

"O I have sighed to rest me." sings the orchestra. The breath of Vesuvisus spreads rose colored above the purple bulk of the long low mountain and then it slips up into grey, pink and golden clouds and wraps the skies in veils and scarfs and mists. And the sun changing is orange burnt and sudden in the sky. Vesuvisus is solemn and its waving veil sinister

until it strikes high Heaven and the sun. Now Capri fades and Sorento is hard and sharp against the sky. The Bay of Naples fades and dies then lives in a long string of tapaz lights which run in a great circle from Pazzule to where Pompei was.

What was wrong with Greece and Rome that they died and fell? Here modern science on which we stand today was born; here beauty found rare expression which still sets ideals today; Yet Greece is bare, eroded, ruined and poverty-stricken and diseased; Italy is crime cursed, sick and wretchedly poor. War piled on war explains much but not all. I wonder if when Aristotle built his republic on slavery, if he did not start the contradiction which Europe has never escaped; so that the Victory of Samothrace and the Moses of Michelangelo gave birth logically to black slavery in American and the Industrial Revolution in Northern Europe? And perhaps today Russia had at least to try to replace beneath a new conception of culture, a foundation of mass participation in civilization, which Greece never conceived, Rome thought impossible and Europe and America dreamed of but seldom tried to realize?

42-1B-44

As I range forward in space and backward in history, through the mad ruin of this grandeur and bleak desolation of breath-taking beauty; as I foresee in France and England, New England and California this same awful metamorphesis, my mind struggles to unrav l the reason beneath and the cure above. Here among these islands and seas, from Asia, Africa and Europe, was laid foundations for the world culture into which I was born. Why then is Greece today a squalid waste? Why is the Roman Empire a center of poverty, disease, ignorance and crime?

We got Science and Art from these beginnings; some unsurpassable heights of culture were reached, which built upon and not wasted, might still guide and enrich us. Here Faith in man and his destiny hurled great monuments to heaven and bore honest, keen, self-sacrificing servants of the common good? What happened? I see Faith which is pragmatic hypothesis going blindly and bravely and all unselfishly ahead and Science which is knowledge reaching the rough and guiding hand, until impatient Faith breaks away and lurches forward to doom, war and hate. I wonder if Aristotle in his logical building of his city on a substratum of slaves and barbarians did not make the initial mistake which formed the morass into which the world floundered, and which made Romae a slave empire, and forced the Renaissance to give birth to slavery in the New World? Out of this conception of a slave-supported society, we must emerge. The United States had opportunity but refused it in the Reconsturction after bloody civil war. Perhaps Russia is groping for the way out; for a civilization that will not die of its own contradictions.

42-IB-45

How could I best pause to see this, and now to write it, hurrying as I was through a world staggering blindly between two wars that in ferocity and sheer human depravity spelled one of the Ends of Time? But precisely for all these reasons I must see the world, as I turn home between the daring experiment of Russia and the Western World where modern freedom was born. Through the fading fires of Greece and Rome I came back to reinterpret to myself my native land.

At Naples I boarded the magnificent liner of the Italian Line, built for the luxury trade of rich America. Although I had ordered a second cabin passage, the polite management had reserved a single first class

cabin on the theory that no American was too poor to afford that, even though black. It left me practically bankrupt with the baffling problem of sufficient dress shirts. But one martyrdom I was spared. Indeed I supposed that in half the cases where all my life I have expected discrimination, I have been disappointed, it has not happened. This made it however not sweeter in the other half, where it dropped relentlessly with silent and bitter insult and cruelty. In this case a Harvard man (of all folk!) and his family made my trip most enjoyable; and the boat was a dream of luxury and taste, here on the eve of world disaster.

42-18-46

I returned to America late in 1926. Normalcy and Harding, the president in whose Negro descent I firmly believed, was dead. In his place reigned the colorless Cooledge, man of my own thrifty New England, who knew as much about the world as any narrow, untravelled and unread provincial. He and his powerful industrial backers had beaten La Follette, honest but hesitant hope of the Liberals, in 1924; and now Cooledge was set to collect foreign debts and raise the tarif to unheard heights so as to make payment of the debts impossible; to beat down the prices of farm produce, steal government oil at Tea-Pot dome and chase the murderous liquor gangs to jail for failure to pay income taxes. War was merrily "outlawed" by the Pact of Paris in 1927.

The country was literally seething with prosperity. Wall Street gambling was reaching new heights of audacity and all the old stick-in-the-mud rules of investment were being broken. Stocks yielding six per cent were selling on a ten per cent basis because of the golden age was a-coming with America in the saddle. But my little business, the Crisis Magazine, which was paid for by low-wage black workers was losing ground.

Its subscribers were out of work. Perversely I was concluding that the fault lay in me; I was not satisfying my readers.

What was happening in the world? The United States was blissfully unaware that anything was wrong that could not be cured by quick return to 19th century methods of government and industry. What could happen to a great, rich unconquerable land like ours? Coolidge did not "choose" to run and no one chose to have him. We proceeded to elect a new President on the incidential question of whether a Catholic could sit in the White House and also as to whether Negroes had any political rights. The Negro vote was completely ignored that the leaders of the race complained bitterely to deaf ears.

42-18-47

Herbert Hoover was elected president and Hoover looked like just the type of business man to restore and re-build industry after what all Americans believed to be the last war which modern civilization would permit to intertupt trade. Herbert Hoover had made money as an engineer out of the cheap labor of China, Mexico, Australia, India, And South Africa. Early in the new century he had invested heavily in eleven Russian oil concessions and in companies to exploit timber and minerals in the Urals. He shrewdly sold out heaver before 1917, when these various concessions were confiscated by the Bolsheviks. Naturally he became a bitter enemy of Bolshevism which he said was "worse than war." When he became United States Food Administrator in 1917 to 1919 he distributed nearly all of the hundred millions which he handled among the armies and peoples who were fighting the Russian revolution. Later as Secretary of Commerce 1921 -28, he was a well-known enemy of Russia.

With Hoover as President there was no hope of the recognition of the Soviet Union by the United States. But no sooner was he seated in the

White House, than suddenly in 1929, the industrial organization of the United States crashed in unprecedented ruin.

I had by this time decided that my work as editor of the Crisis was no longer demanded. Quite unconsciously I had absorbed from my day the fashion of guaging usefullness and need by profit. If an enterprise was profitable, or an undertaking was paid for by the consuming public, that proved its worth automatically. If and when it did not pay, it was not needed. Such reasoning was idiotic as I soon came to realize; but also I realized that when my own effort could no longer make this periodical pay, then those who there-after helped support it, had the right to determine its policies. This latter fact hastened my change of work. I was sure that the propaganda era of my life was at an end and that now at the end of my life--I was then 61--I was justified in retiring from public agitation and devoting myself again to social investigation and pure literature. The urge to do this was all the stronger because opportunity offered to work with a friend; to wark at the center of the Negro Problems in the state of Georgia; and to be paid a modest salary of $4500 which was sufficient for my needs. I prepared to leave New York and the NAACP, and the deepening gravity of the Crisis hastened my going; so that in 1934, I was at Atlanta University.

42-13-48

Naturally my interest in Russia kept up however and I was increasingly disturbed by the news in the press. I did not, however, place reliance on the American Press, as I had formerly. For instance the reports of famine and trouble with the peasants did not alarm me. I expected no miracles in Russia. I knew that she had but embarked upon a momentous and revolutionary social program and that from its inherent difficulties and those deliberately placed in its path by the Western world, she was bound to

have a difficult path. Moreover from our custom of glorifying war; stoping with "victory" and then utterly ignoring the frightful recovery from murder and destruction and maiming in limb and morals--I knew that few persons criticising Russia had an idea of her utter prostration from ten awful years of foreign and civil strife.

"Then there were the terrible famine years of 1921-1922, which produced a positive migration of the peoples amongst the utterly destitute population; whole families, all the inhabitants of a settlement, were forced to leave their homes and go elsewhere in search of a crust of bread... What followed--the period of the NEP, the New Economic Policy---confused people's ideas still more. For whereas the preceding years had let loose the brutish instincts of the starving people, now the instincts of those were roused who scraped together the money which but yesterday had been utterly worthless and so enjoyed a degree of prosperity hitherto unknown in Soviet Russia. The demand for women who had fallen on evil days increased from day to day. Restaurants, cafes, and taverns flaunted themselves again, and wine was sold once more. There was nothing to bridle the human instincts which had at least been repressed in the days of war , communism by a stern military regime. The number of divorces and abuses of the law increased vastly even in the country. And so that 'free love' which has so often been misunderstood, as well as the misunderstanding or misinterpretation of revolutionary forms, began to degenerate into excesses."

"Men who spent seven years at the front and then at home, the ruthless storm troops of the regime who quailed at nothing, will today cover their eyes when the scenes of the civil war are conjured up before them by questions. They must have been appalling beyond all measure, incomparably worse then the scenes of the external war. The infernal cruelty of man's hate

of man, compatriot of compatriot, neighbour of neighb ur, the beastiality on both sides induced by familiarity with murder, which must eventually have become for many an indifferent habit, a mechanical exercise of eyes and hands; and this piled upon the misery intensified to the utmost degree. Villages and industrial works converted into fortresses, defended by men and even women, pausing in the intervals of fighting to manufacture the articles of peace; and these manufactures always being claimed first of all, and often simply commandeered, for the fighting troops of the side which, in the changing fortunes of civil war, was uppermost for the time being---this is what the economic system must have looked like over a great portion of the country."

42-18-50

All this I realized and allowed for, but when Trotsky was exiled into Siberia in 1927, I was genuinely alarmed. I did not expect any superhuman unanimity among leaders in the Soviet Union. In so vast an undertaking there was bound to be strong and bitter differences of opinion.

"There ensued what must seem surprising to those who believe that the U.S.S.R. lies groaning under a peremptory dictatorship, namely, three years of incessant public controversy. This took various forms. There were repeated debates in the principal legislative organs, such as the Central Executive Committee (TSIK) of the All Union Congress of Soviets and the Central Committee of the Communist Party. There were hot arguments in many of the local Soviets, as well as in the local Party organs. There was a vast (Oppositionist) literature of books and pamphlets, not stopped by the censorship, and published, indeed, by the state publishing houses, extending, as it stated by one who has gone through it, to literally thousands of printed pages." But with most folk I had been caught with Trotsky's brilliant qualities and thought of him as embodying the revolution next to Lenin himself. But it was extremely difficult to get at the fact from Russia, since

from the time Trotsky was expelled in 1929, his version of the controversy filled the press of the world. In book and periodical Trotsky was a free as Tito today to express his ideas of the Russian Revolution and of its preversion and imminent failure under Stalin.

On the heels of this came the trials and executions in the Soviet Union: the 14 Mensheviks in 1931 and their imprisonment; the British and Russian engineers in 1933 and their conviction and expulsion; the death of Gorki in 1936, followed by the Moscow trials of 1936 and 1937 with their mass executions. Many of my friends and acquaintances withdrew from the Russian cause or were silent. Max Eastman, Editor of the Masses, which I had so admired, became a thick and thin follower of Trotsky. John Haynes Holmes became silent and liberal, public opinion in America became increasingly anti-Russian. But I kept still and withheld judgment. I still believed in the country I had visited in 1926 and so greatly inspired me. I therefore waited for the facts.

42-18-51

This was the story of the years from 1927 to 1937 as the Union of Soviet Republics tell it. I make no excuse for accepting Russia's own version of these days, not simply because she has a right to be heard; but because to my mind in every essential particular, I am convinced that this is the truth.

From 1920, when Lenin introduced the New Economic Policy, Trotsky, Bukharin and Zinoviev led an opposition group designed to remove Lenin from leadership. The Party in 1921, repudiated this movement and warned Trotsky. In 1922, Stalin was elected as General Secretary. Immediately the Trotsky group went underground and adopted a secret organizing method devised earlier by the British spy, Reilly. It soon had coeds and pas words and began to penetrate various governmental departments including the army.

A friend of Trotsky became Soviet ambassador to Germany and approached

the powerful Reichswehr for support. As a result, between 1923 and 1930, 250,000 gold marks annually was furnished by the Germans to replace Lenin by Trotsky as head of the Soviet State. The bribe amounted in the end to a half million dollars. Thus supported by funds, Trotsky at the death of Lenin in 1924 made his bid for power. At the Party Congress in May, he forced the question to a vote, and was unanimously defeated by the vote of the 748 delegates.

42-18-52

Trotsky immediately prepared for armed revolt. Through Winston Churchill and the spy Reilly, he invited Savinkov, a professional assassin and friend of Mussolini to come to Russia, and settled a close friend as ambassador to Great Britain. The Torgprom was set to lead an attack on the Soviets, and Trotsky set September 27, the 10th anniversary of the Russian Revolution, for a revolt. It failed; Trotsky was exiled to Alma Ata a city of over 200,000 persons in Southern Kazak in a climate not extreme and where he was furnished a house for his family and personal freedom for writing and correspondence. He himself said that in seven months of 1928 he received 1000 pieces of political mail and 700 telegrams and sent 800 letters and 500 telegrams. He was visited by a government official and warned. He refused to heed and in January 1929, was ordered out of the Soviet Union, to the Turkish Island of Prinkipo in the Sea of Marmora, where once Woodrow Wilson planned a Peace Congress. He immediately began in Turkey, France, Norway and Mexico during the next eleven years, a world war against the Soviets which nearly deprived Russia of all liberal sympathy and convinced the reaction that communism was doomed.

He arrived in Turkey in state with an armed bodyguard and was greeted by the press of the world. Meantime the Torgprom in Paris prepared to stop Stalin's proposed Five Year Plan of Russian industrialization. Poincare and Briand were sympathetic and an attack on Russia was planed for 1929 or 30.

A French staff was ready with soldires from Poland, Rumania and Finalnd; Wrangel's White Russian Army of 100,000 and Krasnov's Cossacks were to be prepared ; British munitions makers were conferred with and money was raised for sabotage in Russian industries.

But all this movement was slowed up by the financial crash in Europe although in China in 1931, Japan began her foreward movement by invading Manchuria. No real study of the extraordinary personality of Leon Trotsky has yet been undertaken. He was convinced of his mission to lead the world to communism. To his ego-centric mind, he was not betraying Russia but leading it to head world revolution; he was not selling himself to the Germans but deceiving the dull Teutons into delivering themselves into his powe; he was not surrendering to capitalism but inducing capitalism to help him establish communism. It all worked back to his fanaticalimlieffin his own wisdom and cunning and it all made him one of the great traitors of history.

42-18-53

He began with "My Life", a fictionalized account of his career as the real leader of the Russian Revolution. This was followed by four other books and a stream of articles, which found world circulation, as grist in the mill of reaction and threw confusion into the ranks of the friends of Russia. The campaign raged through the Great Depression, confusing the thinking of liberals and running consecutively with Fascism in Italy and Nazism in Germany. Trotsky's son, settled in Germany got into connection with the German techinicians and engineers working in Russia and with the German spy service. Sabotage on the new Russian industrial was organized. Secret terrorist cells, composed of all the varieties of enemies of the revolution spread.

In 1933, when Hitler came to power in Germany, Trotsky moved to France with the blessing of Deladier, and got in touch with the Nazis through Hess and Rosenberg and with soldiers like Tukhachevsky in Russia back of Trotsky

began to gat er an extraordinary aggregation of czarists, reactionaries, Fascists, liberals and dissident radicals.

In Russia dangerous evidences os this world plot began to appear, strengthened by the success of the Russian Five-Year Plan and the increasing prosperity of the Soviets in the midst of the industrial crisis elsewhere. The next year Japan was drawn in, and things began to happen in Russia. In the coal mines of Siberia, accidents became common and an engineer who reported this was found dead. Molotov, then chairman of Commissars was nearly killed. Trotsky gave orders for the assassination of Stalin, Voroshilov, the Commissor for War and Kirov; several attempts miscarried, but Kirov one of Stalin's closest co-workers was murdered in December, 1934. Several arrests were made and Zinoviev and Kamenev imprisoned, but the real conspiracy was not unearthed. Then came a series of fiendishly clever murders by physicians collaboration, culminating in the death of Gorki in June, 1936. A German-Japanese attack on Russia followed in 1935. In October of that year, Mussolini invaded Ethiopia; sabotage efforts, directed by Germans and Japanese in co-operation with Trotskyites spreading in many parts of Russia, in mines, railroads, power plants and construction jobs. In June, 1935, Leon Blum's Popular Front government forced Trotsky to flee to Norway where he settled near Oslo, and near Major Vidun Quisling, who also was attacking Russia. Trotsky was now impatient. He ordered Radek to cooperate with the Japanese and Germans, proposed territorial concessions to Germany and the entrance of capital from Germany and Japan for exploitation. In return Trotsky had "an absolutely definite agreement with Hitler to establish the Trotskyites in power in Russia. He said war would come in 1937.

The Soviet Government was aware of the conspiracy but it had long and carefully gathered its case. In 1930, eight members of the industrial

42-18-54

party were arrested for conspiracy and sent to prison. Next year, 14 former Menscheviks were accused of sabotage and received 500,000 rubles from the Torgprom and other sources. They were all found guilty and imprisoned. Then in 1933, six British and ten Russian engineers were arrested and charged with sabotage for the British Intelligence Service. The Russians with one exception were all found guilty and sentenced to prison terms. One British subject was acquitted and the other five found guilty.

In the Summer of 1936 the Soviets began to strike back and strike hard. In August by re-trying Zinoviev and Kamenev with new evidence, they started the first of the celebrated Moscow trials and sentenced 16 to be shot. They then arrested Radek and three others and removed Yagoda. In January, 1937, they sentenced Radek and three others to be imprisoned and thirteen to be shot. Later they tried Tukhachevsky, sentenced him and seven generals to be shot. And finally in the last of the Moscow trials, they shot Yagoda and eighteen others and imprisoned three. The trials were fair and the testimony overwhelming. The American Ambassador wrote to the Secretary of State: "I talked to many, if not all, of the members of the Diplomatic Corps here and, with possibly one exception, they are all of the opinion that the proceedings established clearly the existence of a political plot and conspiracy to overthrow the government. But America and the Western world were given the idea that all this was simply Communistic brutality.

This judgment was bolstered by the final efforts of Trotsky. Forced to leave Norway in 1936, he flet to Mexico, and from there spread world-wide propaganda. He enlisted wide American sympathy and cooperation, and was welcomed to the best magazines and periodicals. A Committee of Defense, with prominent names was formed but the hearings produced nothing but Trotsky's own testimony. He tried to enter the United States and testify

before the Dies Un-American Committee, but did not succeed. He was killed by a colleague in 1939 in a dispute over a woman. The Soviet Union was naturally held responsible for this crime.

Meantime in the very year, 1929, when industry crashed headlong in the United States, the Soviet Union began its Second Revolution under the leadership of Stalin. The first revolution of 1917, was the well-known pattern of revolt against tyranny, feudalism and exploiting capital which first called to power the liberal republican regime of Kerensky after the attempted yielding and reaction of the Czar. Automatically revolt of workers and peasants followed, and then Lenin took hold. War Communism followed not by plan but in the absence of plan. Lenin epplained that dire necessity, war and destruction imposed this preliminary socialism on the Bolsheviks in 1920, with nationalization of industry, socialization of farming and lifting of taxes. This three years' episode of War Communism has been looked at in tow ways. It has been described as if it had all been part of a deliberate plan to establish a Communistic state. Lenin, on the other hand, as plainly appears from his numerous publications during 1917, had contemplated a lengthy period of transition, the various stages of which he could not foresee, and which he imagined would have to take the form of a whole series of economic experiments. In 1921, he explained--to use the words of an able German investigator--that "it was only dire necessity, war and wholesale destruction that had imposed this war-time communism upon the Bolsheviks. It had consisted in the fact that all the surplus, and sometimes a portion of the necessary, foodstuffs were taken from the peasants in order to supply the army and the workers--.... This military communism was a provisional measure, because in their then desperate plight the Bolsheviks could shrink from no measures, however estreme; half starved and worse than half starved, they had to hold

42-18-52

their ground at all costs and keep alive the workers and peasants."

Fortunately for the Bolsheviks, just when the people, as it now seems, were at their last gasp, the foriegn intervention came to an end. The year 1920 was the year in which War Communism reached its culmination. "That year," it has been said, "will live long in the memory of all Russians who lived through it as the coldest, hungriest and most dreadful year of the revolution." Then in the spring of 1921, came the worst famine in Russian history involving 43 millions of folk in half Russia. The death rate was enormous, peasant revolt was followed by military mutiny. Immediately, Lenin took his one step back in order to make two steps forward. His plans were almost fatally hindered by foreign invasion, civil war and the Trotsky betrayal. Lenin died, but his plans lived on to be implemented by Stalin.

Stalin realized even better than Lenin that the objects and ideals of the city worker and the rural peasant did not agree. He climbed no new heights of theory and dug no subtle cellars of logic. He himself was a son of a Russian slave of the soil and he saw that distribution of land among the peasants even the State held title would not socialize farming. On the contrary there began forming a new agrarian capitalism with its claws on hoarded food and without a steady and growing food supply, Russia was doomed and her industrialization and socialization would be impossible.

42-18.57

The Russian farmers were composed of poor tenants on tiny holdings; small farmers and well-to-do Kulaks. The first could be attracted by state conducted cooperative farms; and also some of the farmers; but the Kulaks had the mentality of capitalists, enforced by ignorance and custom. The opportunity to cheat and coerce the poor peasant was broad and continuous. Stalin knew the Kulak his fathers had been their slaves for generations. He did not hesitate. He broke their power by savage attack. This revolution was

more radical than in 1917, and Stalin knew it. "He walked the Giant's Causeway almost without halt or rest. Behind him were tramping the myriads of weary, and bleeding Russian feet."

In 1928, the war began to break the power of the Kulak whose characteristic was described in 1895, as "the hard unflinching cruelty of a thoroughly uneducated man who has made his way from poverty to wealth and has come to consider money-making by whatever means as the only pursuit to which a rational being should devote himself. " There were a million such Kulak families in Russia in 1928, out of 25 million peasant families, and the State proceded to break their power. The proceeding involved force and cruelty. The Kulaks reduced agricultural output, stirred up revolt and slaughtered animals, so as to bring a grace crisis in 1928 to 1932. But the state persisted. Large numbers were banished to Siberia and the struggle was won by 1934.

42-18-58

"Strong must have been the faith and resolute the will of the men who, in the interests of what seemed to them the public good, could take so momentous a decision." We may well ask and seriously ponder whether or not the Russian Revolution might not have been carried through with less blood and cruelty, with less appeal to brute force. We may earnestly believe that with all the possible gain form the efforts of Lenin and Stalin, most of it might not have been accomplished at lower cost to the decent instincts of mankind. But Russia answers and has right to answer that this revolution cost less in life and decency than the French Revolution, than the Protestant Reformation and than the English Civil War; that the chief guild for the high cost of communism was not the fault of Russia but of Europe and America which silently condoned the slavery of Russians for centuries and then at fabulous cost tried for twenty-five years to re-inslave them to the degenerate Czars and filthy priesthood. If the cost of revolution was excessive

and revolting the fault is certainly not to rest on Russia alone. For a people who have murdered, raped and crippled so many billions over the whole world for so many centuries to suddenly get sympathetic and mealy-mouthed over thieves, liars and criminals, does much more credit to their hearts than heads.

We must remember that this problem of the farmer in modern life has been neglected to our cost. Here are folk who in every land have been physically by-passed by science, education and technique; they have in all lands been natural victims of exploitation and propaganda and in the automatic world market have been deprived of a decent income. In defence their leaders climbing ruthlessly to the top have enslaved their workers and made common cause with the urban industry. This has stopped democracy in France, Germany, Britain and America.

42-18-59

In the Soviet Union, fol owing the liquidation of the Kulaks began a Five Year Plan (1928-1932) of industrialization which included collective farms and the development of heavy industry in coal, oil, electricity, blast furnaces, automobiles and machines. Coincident with this came a gigantic effort to send the millions of Russian illiterates to school. On a scale never before seen in this world, Russia in a generation turned millions of illiterates into a nation with 90 per cent of literacy. It was a gesture which proved to the world that whatever mistakes Russia might make in the future they would not be due to ignorance. The success of this effort hurried the Torgprom, into planned attack on Russia in 1929 or 30. But the financial crisis spreading over the world, stopped these preparations while the Russians proceeded into a second Five Years Plan from 1933 to 1938 devoted to the making of consumers goods and calculated to meet the sacrifice and unrest of carrying out the development of heavy industry.

Thus between 1917 and 1935, Russia carried through the three revolutions which took the attention of Western Europe from 1500 to 1900, the Reformation

of religion; the control of industry and agriculture; and the authority of the mass of the people in the government of the State. No one can compute the sum of human suffering caused by this triple revolution over so vast an area, in so brief a time, amid the most embittered civil war, supported by half a dozen foreign armies actually invading soviet territory.

42-18-60

The total cost was less than Western Europe paid. Whether the result was better or not Time must tell. Meantime Western Europe and America went down into industrial collapse. The Japanese army occupied Manchuria to "save China from Bolshevism in 1931. That sameyear, Montagu Norman, Governor of the Bank of England, wrote to M.Moret, Governor of the Bank of France: "Unless drastic measures are taken to save it, the Capitalistic system through the civilized world will be wrecked within a year."

CHAPTER V

1936 (1) XIX

I Gird the Globe

What happened to the European world in the third decade of the Twenti eth Century? A system of human culture, especially its pattern of industri al organization collapsed. Some argue that this collpase was ~~complete~~ definitive and due to inherent contradictions and weaknesses; others contend that t the breakdown was a temporary war casualty and already on the way to recovery. However that may be, the question still is, just what happened?

Nineteenth century civilization in Europe rested on four inst itutions: 1. Peaceful understanding between the Great Powers; 2. the intern ational gold standard 3. The self-adjusting world market 4 ~~Free economic~~ Free individual initiative in industry. Under this syatem mankind was red duced to regular labor, natural resources were linked to land and ~~Society~~ ~~or~~ the mass of men ~~enslaved~~ controlled by the automatic world market, while the hostility of the Great Powers was unexcelled In the second decade of this century the Great Powers went to war; in the third decade society, that masses of human beings all over the world, broke up the world market, the Gold Standard became unworkableand free individual initiative in industry began to give place to planned economy.

37-11-2

The Hundred Years Peace, 1815 to 1915, was an era of almost contin uous war; but war, chiefly between European countries and other parts of the world which ~~it~~ Europe gradually reduced to subjection, either through political control by military force, or industrial control by investment and confidence agreement to as to the distribution of goods and services. The peace between the Great Powers rested on ~~agree-~~ co-operation ~~ment as to~~ in establishment of political domination over the productive parts of the earth and the price levels in accord with which the wealth of the world was distributed. The real ~~court of appeal and compromise~~ bank between politics & industry in this delicat and world wide individual arrangement was High Finance, ~~that super-legal set of banks and financial organizations which~~ regulated the fixed prices and ~~and~~ exchan change of wealth the world over. It rested on legal foundations through ~~in~~ nat ional banking institutions and ministries of finance; but it transcended

ded these in the shape of private individuals and banks and organizations which formed a sort of super state.

After avoiding by conference and concession, and by balancing the political powers against each other through constant armies and navies and preparedness for war, suddnely in August, 1914, all agreement snapped and the First World War ensued. The underlying cause was the dissatisfaction of Germany, Italy and Japan with the current distribution of wealth and control of land. The result however was far more revolutionary than anyone had dreamed: Japan emerged as a world power demanding to be consulted hereafter in all world agreements, particularly in economic matters affecting Asia: socialist revolution in Russia and civil war in China; unrest in Indiaand the beginnings of disturbance in Africa; in other parts of the world, dissatisfaction with the prices of materials and wages of labor. The result was that the self-adjusting world market ceased to function widely and individual initiative in trade and industry had to rely increasingly on social controls of the state. The gold standard was dropped since no available hoard of gold sufficed tomeet the prices demanded in the absence of regulated barter.

Desperate effort was made after the Peace of Versailles to restore the old economy. The Balance of Power was replaced by the League of Nations; trade was pushed by costly effort to restore Russia to the world market and keep China and India from leaving; but in vain: the United States muddled efforts by refusing to join the United Nations, demanding payment for war debts and raising her tarif to prevent such payment and hoarding fatally scarce gold. By herculean effort, Great Britain restored the gold standard in 1925 and France, Belgium and Italy followed in 1926; but six years later the gold standard was dropped by Britain, and in a few years by the world. The magnificent edifice raised by the Industrial Revolution and based on American slavery in America, fell in ruins.

After my return from Russia in 1926, my interest in all this w

But the world became increasingly dissatisfied with the distribution of wealth and power. This was not simply the natural didsattisfaction of the submerged proples, but increasingly of a land like Japan who wanted to sit in the world's councils: but of Gremany and Italy which wanted colonies to exploit . Compromises with apparent sucess wer made from I900 on, but ~~suddenly in August, I9I4, understandings and promises broke and~~

centered in the plight of the colonies. I had hoped that the new League of Nations would begin the solution of the colonial question. The Mandates commission which I tried to influence promised a beginning, but a small one as it was under control of colonial ministries and subservient to world industry and commerce. The Great Depression found me teaching at Atlanta and casting about for new ways in which I could help by thought and pen the emancipation of black folk. The Reign of Roosevelt and his ~~socialist effort called the~~ New Deal was bringing the social power of government to the rescue of private initiative which had landed banks and other industries in bankrupcy. To me this seemed a step toward the socialism in which I believed, and I was especially pleased at the WPA and other efforts to help artists, writers and actors to get ~~chances~~ openings which profit ~~mad~~ mad private enterprise denied them.

37-11-4

But the question of colonies, especially in Africa still irked me. In 1934 therefor, as Hitler rose to power, I approached the Karl Schurtz Foundation with a proposition, which I thought might interest the new ~~masters~~ democracy of Germany: I asked for a fellowship to enable me to

[redacted]

~~July 15, 1933~~ 9 months this

My primary object in this plan is to influence public opinion in the United States and public opinion in Germany so that together in harmony and in mutual appreciation, they can bring their best thought and action to bear on the problem of Africa and the Africans. I would hope by stimulating this alliance of thought, to broaden the provincial outlook of Americans on foreign affairs, and at the same time, make them realize that the Negro problem is a problem of international politics; and that the

Wider and more systematic exploitation of colonial peoples to restore the economy of Europe and appease white working classs became a wprld obsession. My Pan-African movement was quietly stymied; I sought a meeting in French Africa in 1930, but was polightly rebuffed bythe colonial ministry.

[redacted]

CHAPTER V

I GIRD THE GLOBE

It is not until after the event--often long after--that wise men can evaluate the contemporary scene. I realized this in the Desperate Decade from 1926 to 1936. We were passing through one of the periods of Boom and Bust, which Marxian philosophy claimed was the inescapable destiny of the Capitalist system. I had lived through some seven depressions; that of 1873, I remembered, because of the huge silver dollar which my uncle gave me as a child and which was my first sight of real money. During the depression of 1893, I was abroad and ~~those~~ that of ~~1903 and~~ 1907 found me teaching and served to keep my salary at $1200 a year or less. ~~After that I noticed nothing until the after-war boom in the twenties.~~ I now realize how differently business expansion and depression affect social classes; the rich and well-to-do already comfortable get unneeded income, resulting in luxuries and power; but the lowest class of laborers living below decent standards begin to get necessities when suddenly at the first sign of depression they are plunged into utter poverty.

I saw some such result in 1925 when the income of my magazine began to decline; around me was apparent prosperity, but Negroes were beginning to lose jobs. I foresaw a time when the Crisis would not pay its way and this came with the crash of 1929. Two alternatives faced me: to continue to edit a subsidized periodical, in which case the givers of the subsidy would dictate the policy; or to take this opportunity to change my life work from propaganda back to learning and teaching which had long seemed my real vocation.

Especially at this time, 1926 to 1936, I was eager to know much better than I did, just what "drastic measures" were being taken in high places, to save the system of culture into which I had been born. Especially I wanted to learn, not only what was being done, but how these plans would

affect the Negro peoples, not simply in the United States but in Africa; and I wanted to know what part Russia and Communism would play in the coming change.

At the same time then I was planning to give up publishing and editing the Crisis and returning to teaching in Atlanta; while I was writing my interpretation of Reconstruction, I was seeking also a chance to spend some time in Europe to see at first hand was happening. I had no funds of my own to spend for such an investigation; my salary for the decade was $5000; but I had a wife and child and must save a little for the future. No institution was prepared to finance me, especially as I could not guarantee to what conclusions I might come. I did however center on Germany as the key area for study, because I knew its language, people and culture best; and because, I was convinced that Germany, was a critical point where the fate of modern culture would be settled. From Germany my observations could extend to Russia and then I had a dream that by some legerdemain I might even view Asia.

41-9-5

I started by getting in touch with the Karl Schurz Foundation which was furthering German American Friendship. I asked in 1931 opportunity to go to Germany and make contact with those organizations who in the past and ~~at present are~~ were interested in German colonies, particularly in Africa, and who represent in 1932 the liberal and progressive spirit. The Board declined saying: "We realize that you are in a position to use such a study as you propose m making,... However, our most effective contribution to the welfare of the American people seems to lie in other directions." But they had under their administration, the Oberlaender Trust which offered fellowships for study in Germany and the Secretary wrote me in 1934 suggesting that I might make

Copy only heads requested

9

a study of Black troops in Germany; I eagerly assented, but nothing more was said, until I called on the Secretary in Philadelphia. ~~As a result~~ On his advice, in 1935, I asked to "investigate in Germany and Austria the relation of education to industry."

As a result of this request, I was granted a ~~sum of~~ $1600 for six months study in Germany during the year 1936. By teaching in summer school at Atlanta, I arranged a semester's leave of absence with pay in the Fall and I planned to stay four or five month's in Germany and the balance of the leave in Russia and if possible ~~in~~ To return by Japan and China.

11-9-36

~~I knew as I left America in June, 1936~~ Little did he dream of a voyage of, what had happened to the world. European culture in the Nineteenth Century had rested on four institutions:

1. Peace between the Great Powers
2. A world market regulated by the international demands of trade
3. A gold standard ~~of~~ for prices regulated by international High Finance
4. ~~Wide freedom of~~ Free individual initiative in industry for the white world.

For about a hundred years, 1815, to 1915, peace among the leading European powers was fairly well kept; or if broken, patched up before trade and industry suffered. ~~Wars in the rest of the world~~, continued incessantly for colonial empire, thus linking imperial Europe and eventually North America in world domination of the darker peoples of the earth.

However as this European consortium became increasingly tightened and perfected, three nations, frozen out of its greater profits, began more and more peremptorily to demand share of colonial areas and voice in High Finance.. These were Germany, Italy and Japan, ~~two of which~~ nations ~~I proposed to visit.~~

The result was the First World War, with Germany and Italy fighting for colonies against the great colonial powers and the United States; and these allies securing ~~with~~

the cooperation of Japan whose price was recognition as the equal of dominant white European powers. This war disrupted the industrial organization on which the Ninteenth Century rested; the world market and the gold standard ceased to function and Russia came forwardto challenge free industry by planned economy and the raising of workers incomes. After the war, desperate effort was made from 1918 to 1929 to restore the world market and the gold standard; and to resist Communism in Russia. It was the irony of fate that just as Western Europe was practically united to overthrow Russia by force of arms, the system of culture which had lifted the nations to world dominance during the 19th century, built on conquest of India and Negro slavery in America, the Sugar empire and cotton kingdom and the Industrial Revolution, crashed in unprecedented ruin.

None in Europe, however, doubted but what the collapse was temporary, caused by war and destruction and capable of restoration within a reasonable time. From 1929 to 1939, every effort was made to accomplish such restoration. But in Italy and Germany the methods adduced were disconcerting to Britain, the United States and France; since they were frankly socialistic in method and propaganda, although the object of both Fascists and Nazis was to keep the forces of capitalism in power. Western Europe and America naturally did not object to the objects of this socialism; both Mussolini and Hitler received wide praise for the way in which they held labor in check and protected capital; but their methods of accomplishing this involved not only abolition of democratic controls of almost every sort coupled with such immense expenditure for social ends like roads, education, housing and recreation, and such ~~immmmxxexpenditurxsxfxxxxx~~ military and police preparedness as would in the end make severe inroads on profits. Efforts to accumodate these diverse points of view filled the decade and divided the opposition. Those who believed democracy consistent with capitalism, were aghast at the dictatorship

41-9-37

of the Fascists but attracted by their growing concentration of Fascists on the conquest of Russia. While the Nazis were torn by greed for the resources of Russia and hatred of the colonial monopoly of France and England.

In the midst of this embittered calm which was prelude to another and even more horrible world war, I returned to Germany after a lapse of forty tragic years since I first saw the Rhine and walked the Unter den Linden. I had strong affection for Germany, because in the days of my Sturm und Drang, this was the land where I first met white folk who treated me as a human being. At the time It bolstered my faith in the world and gave me strength to face and fight its wrongs. I went again to Eisenach and the Wartburg; I went to Berlin and remembered Schmoller, Wagner and Max Weber; I did not forget the hugs and stuttering Von Treitschke in the halls of the University. But all was changed.

41-9-38

The plan for restoration of European economy was ~~thus~~ based largely on the restoration and development of colonial imperialism. But this could not apply to Germany. Even if Germany recovered her lost colonies-- and this she proposed to do-- she would still not have space and resources to support her home economy. Only larger colonies torn from England and France could do this and such a plan was costly even if anyway possible. But there was another possibility and that was occupation and exploitation of the Russian Heartland. This was doubly attractive, because by such a venture the demands of German labor could be met and the menace of Communism destroyed forever. The lure of this program was all the greater because of the economic history of Germany since the First World war. Wealth and power in western Europe had been shaken but not overthrown. In Germany it had been shattered.

41-9-6

It was in Germany during the visit that I saw in the German Museum of Science and Technology, perhaps the best orderly and systematic outline of modern technique, which a person may view. It was located at Munich, with 70,000 exhibits, extending through nine miles of rooms. For a mere glimpse of it, I spent four days just walking through. There are 73 rooms devoted to geology, mining and mettalurgy, with a complete coal mine five stories deep; there are 30 rooms devoted to transportation; 21 rooms to clocks, mechanics and electricity; 10 rooms to sound and music; in the chemistry rooms one can traverse four centuries in an hour; all the wood products of the world are here. From the three floors devoted to these materials we ascend to the three planetariums illustrating the heavens and the whole top floor of textiles and agriculture. This technique is the foundation of the power on which Europe has directed her world dominion. And on this rests the problem of income as I saw it in 1936.

What one notes in the great culture-lands today is the number of people with large incomes who do not work. According to European custom, they are called gentlemen and their condition is a mark of distinction. Perhaps more than in any other country England has an extraordinary number of people who live on large incomes---incomes derived by investments made by their forebears in the United Kingdom, on the continent of Europe, or in the United States and South America, in Africa and in India. These incomes give them leisure, a chance to enjoy what the English call comfort. There is, on the whole, not such comfort as English comfort; no such catering to the fulfillment of most human wants. You can see it in the stores of Regent Street and Bond Street. You can see it in the price of ~~certain~~ theater tickets. You can see it in those silent walled houses right in the midst of London, with servants, and gardens, trees, grass and flowers.

Something of the same thing you can see in France. There is great wealth

~~in France~~ and a scale of expenditures which the crisis ~~has~~ altered to be sure, but ~~has~~ did not in general reduced, although it has made vast ~~reductions~~ changes in individual cases. There is luxury in eating and in living, in enjoyment, particularly in art and art expression of all sorts.

Now all this does not mean, in the ordinary sense, theft and cheating, and innate deviltry, so far as the present possessors of these incomes are concerned. Of course, if we trace them back to the ways in which this wealth was originally gathered and its legal possession made sure, we come straight in contact with murder and ~~cheating~~ robbery in colonies, with starvation wages in industry, with chicanery in the manipulation of investments; and yet on this there may easily come, even in the majority of cases, honest and cultivated men and women inheriting large incomes, being themselves guilty of no wrongdoing, and wishing no one ill; and sustaining by their actions and their thinking the best traditions of modern civilization. It is this paradox that is the problem of income today throughout the world.

41-9-2

There were three points of view in Europe: the British which was to restore the industrial system of the 19th century by keeping her colonial empire, and increasing the profits made there on cheap labor and raw materials but yielding larger share of this profit to home labor, so as to temper their ~~rising~~ demands. The sale of British manufactures to the rest of the world would return to normal if Britain could continue to undersell competitors.

In the case of Italy, Britain had egged the Italians on when the Black Mahdi drove the English out of the Sudan and Italy attempted to annex Ethiopia. She was soundly thrashed at Adua, but was offered by England a free hand in 1906 to try again as price of her entrance on the side of the Allies into the First World War. The Congress of Versailles refused to honor this promise and when Mussolini saw his opportunity he invaded Ethiopia as the

one way to restore Italian economy by making her a colonial power. I was in London when Anthony Eden stood before the House of Commons and announced Englands' decision not to oppose Italy. This defied the League of Nations, but it increased the imperial power of colonialism and might help save the economy of the British Empire.

Belgium is a third case illustrating the plight of Europe in 1936. I stopped in Belgium to see Tervourien again. I saw it in 1921, at the second Pan-African Congress. It is perhaps the greatest single collection of Africana in the world. Berlin and London have valuable collections, and even the one in Dresden, which I saw is better than anything we have in America. But this whole museum, with its beautiful building and magnificent park, sets its own false note when it begins, in its first room with an exhibit of the exploitable riches of Africa. The Congo, fourteen times the size of Belgium, has from the first been and still is regarded as primarily a profitable investment for Belgian and European capital. The worst outrages of capitalism have been curbed at the demand of humanity the world over. Missions are at work and restraining laws have been enacted. But the chief end of the Belgian Congo is today as it was under Leopold: to increase the private fortunes of Belgian capitalists. And if Belgian labor is today in a sorry plight, it is because in the day when Socialists ruled Belgium, they could not see that the cause of the black slave in the Congo was one with that of his white fellow in Belgium. I talked of this to Emil Vandervelde before the war and after, in America and Europe. His reply was to cite the new laws to curb capital in Africa. But what are such laws when they are dictated by investors in the interest of their own incomes?

And consider the human beings whose well-being Belgium is neglecting:

41-9-1

magnificent physical specimens, as the great museum at Tervourien attests. Men of tasts and skill. Men with a history, capable of all human advancement. Yet in 1936 not a single black man of Congo was attending a Belgian University; not a single Congolese had a legal right to an acre of his own soil, and not a single one had any political power to express his own will or dispose of the immense annual wealth created by his labor.

Out of Congo is coming increasing tons of copper and tin, together with oils, ivory, cotton and all fibres. The wealth of Belgium is primarily the wealth of black Congo, and that wealth is being used to curb the labor movement in Belgium and everywhere else it can. It is no answer for Belgium to point to its mission schools and hospitals, or even to its black priests and converts. Religion in the Congo, all unconscious of the function forced on it by capitalism, is making an humble docile class of profitable black labor to underbid white labor everywhere.

41-9-3

The German state, before the First World War, became partner in great industries like steel, chemicals, ship-building, transportation and communications, and Germany spent more for research in industry than any other country. Over this state ruled the landed aristocracy, through the managers and engineers who formed perhaps the most powerful trade union in the world. Such fighting industrial combines, backed by the state, were necessary if Germany was to enter modern industry in competition with England and France. She therefore entered ~~industrial~~ commercial combinations, cartels, export unions and finance consortiums. The First World War was fought to extend these industraial forays into the colonial and semi-colonial areas of the world, dominated by Britain and France. Defeat was revolution.

42-18-76

CHAPTER VI

THE REIGN OF ROOSEVELT

I am an American. My forefathere have been Americans for three hundred years. They have served America honestly and unstintingly. I do not know one of them who has been convicted of crime, although my knowledge is by no means exhaustive. With temporary exceptions, all of us have lived our lives in this land, mostly in New England and New York, often in the West and South. We have not greatly prospered--none have been rich, few have been paupers, few have attained exceptional notoriety.

Assembling the sixteen of my great grand-parents, so as to avoid recent race it would appear from what I can learn, which is not too much, that nine of them were black Africans; and seven European whites. Of these whites, two were French, two other of Latin American descent, one Dutch, and one may have been a New England Puritan, although I trust not. Of white folk connected with my ancestry, I know little. Two were Huguenots probably honest artisans fleeing from persecution and poverty, another was probably a stodgy farmer, of the new aristocratic type; a third possibly a commercial trader; of the others I know nothing.

The Mulatto Du Boises' were eminently respectable folk; I remember my grave gray, unsmiling grandfather as one who rather overdid the respectability line and caused revolt in my handsome, gay and irresponsible father. My calm and even-tempered mother helped to balance the brood. Now the black Burghardts were different--loud and lusty; frinkers of hard cider and whiskey, and never avoiding a good fight. All these forebears served, as farmers, laborers, servants and soldiers, their country and their gods.

To describe my feelings toward the United States as Love would not be English. France from yough I have theoretically loved; not for her blamelessness, but because in fifty years of visiting her soil, I have always met sympathy and courtesy without sueing for it. Despite finer

souls, some of whom I have known, I have always disliked the British, for their intolerable assumptions of superiority to everybody, their snobbery and cold hypocrisy. I cannot forget their contribution to the s lave trade and slavery of my folk.

With 19th century Germany, I felt a kinship second only to that which bound me to Negroes. In part this was the accident of being, in my critical young manhood thrown in close contact with the best of pre-war Germany and h thus having revealed to me a white folk different to any I had ever before met.

On the other hand, America has always to my mind been associated with repression if not insult. Not that all or even most of my American contacts and experiences involved such treatment. On the contrary I have usually lived a normal American life, without hunger, with adequate clother and shelter and with unusual opportunities for education. With this, however and inextri[illegible]ably and continuously interwined with it, went inhibitions pin-pricks and open insults which gew and swelled in my s uld to proportions far beyond their intrinsic worth: where could I eat? Was I among the "Pulbic" in[illegible]ted? Was it worth while entering this competition? Was the Harvard Glee Club jair in judging my voice? Was the Pullman sleeper really sold out? All these and a hundred more incidents, all my life I was trained to ask and expect. Often, probably most times, there was no discrimination nor unfair-ness; but my fatherland conditioned me for a half century to e pect this and despite reason and philosophy, I hurtured hate for the nation for this unavoidable cast of mind.

42-18-77

Then beyond myself, I saw and knew what America did to less fortunate Negrees than myself. I searched for and read details of every lynching and died horribly with the victim. I vividly imagined what I did not see or even hear of. I was soon clothed with a spirital provincialism, an inner

withdrawal and antagonism, beyond reason and experience.

Thus to me, my native land spelled not affection, but duty. This is my native land. I shall never live elsewhere. I could not if I would. I would not if I could.. Porbably nowhere else [redacted] I have received more id as much, in inspiration and opportunity. Had I been born in Africa, in 1868, I would have grown up to be slave of European or of American investors. If I had been born in England, I would have had less chance than in the United States. In France, I would have had more; but I would have been cut off from the Negro people or never know them or their problems. That would mean that the plight of the poor and ignorant and sick of the wor[redacted], would probably not have touched me at all or centainly not as deeply and intimately as it had to penetrate the sould of an American Negro.

42-18-72

That is why I spurned the well-meant advice of George Foster Peabody, that great and liberal white Georgian. "You're right in your fight and your demands," he said, "But you can never win equality in this land. Your struggle is in vain. Why do you not go to France and live?" I answered in my bre[redacted]: all right them I'll lose. I'd rather lose fighting here than win in Europe. And why? Because this nation belonged to me even I never had belonged to this nation. And no God-damned Southerner nor cowardly northern Copperhead nor servile white folks' [redacted]gger was going to stop my [redacted] for the absolute freedom and equality of Black Folk in America.

But I am not so narrow as to think of the United States solely from the interests of me and my people. I know what America has meant to the world Here for the first in modern days, Liberty and Equality blossomed to real flower; here Democracy received a trying-out like nothing Europe or Asia ever saw. Here on vaster scale than elsewhere ever, myriads of men--aye and of women

of differing nationalities and capacity have lived together in peace and happiness, and worked as they chose and thought as they wished. America is triumph and accomplishment for more men than ever anywhere before. It only happens that my fate has been not to be regarded as a fellow human being by most honest Americans and not treated as such; I will not forget or understate what America has meant to white folk; and too I will not bear false witness as to me and mine, either by lauding my slavery or thanking Lincoln for emancipation. I have said and will always continue to say while I speak that the treatment of Negroes in this land, past and now, shames and besmirches the escutcheon of a great and might nation whose son despite this it is my privilege to be.

42-18-29

The experience has narrowed my vision and made me provincial. I have seen Irishmen crawling out of the filth of their bogs to step in my face and crow; hill-billies and crackers from Alabama and Arkansas could spit on me to the applause of thousands; German peasants newly free could insult me and Italians and Slovaks and a thousand others could not only deprive me of a living but depend on white American mobs and police to jail or even lynch me for protesting.

When in season and out I protest, it is pointed out with perfect truth that in America, I have received food and clothes, adequate shelter, education far beyond my fellows, black and white, and no little honor and appreciation. I still maintain that my treatment in America has been exceptional and not characteristic. That my fate was not due to my desert but to lucky chance more often than to philanthropy. Had I been born on a Mississippi plantation instead of in a New England village; had not liberalism

at Harvard in the last decade of the 19th century cracked up doors to a few students from beyond Back Bay; if Rutherford Hayes, perhaps with some qualms at his role in Reconstruction not given me a Slater Fund Fellowship against the advice of respectable America, I might now lie buried as deep as thousands of unknown black boys of quite equal [redacted]ts.

42-113-80

This land is at fault and grievously gu[redacted]ty for not doing for thousands of worthy Negroes what she has inadvertedly done for me and for utterly discouraging black boys and girls less stubborn and lucky than I, to reach for stars instead of being content in the gutter. Only a few years ago a professor at Bowdin protested against sending a brilliant black student to Harvard on fellowhsip, lest "he become bitter like Du Bois". And when Harvard gave him a doctorate and used his thesis as a classroom text, the head of his department said confidentially to a friend of mine: "We'd keep him here if he wasn't a nigger!" Far more important than this, I contend that the United States is suppressing her millions of black folk has ruined the ideals of liberty, equality and democracy for the mass of her white citizens and for the world. No double standard o[redacted] decency can bring the millenium.

My reasoning may be strained; but whether the reader agrees or not, I am sure he can understand the impact which Russia had upon me in 1926. I was not naive enough to think I had visited Utopia. On the contrary I knew quite well that I had had but a brief glance at small part of a vast land and of a desperately complicated problem. I boasted to my intimates that I was at the time the one American who had been a mo[redacted]h in Russia and had not written a book about it.

If I may quote a sour-mouthed old virago, whom the New York Board of

Education insists on keeping to teach "niggers" and Jews their places, I have most of my advantages in America by insisting "on being where I wan not wanted."

There have, to be sure, been times when pushing in, I have found courtesy and welcome, but not usually. Why then over long years and with bitten lips have I continued tp push? Because I wanted the opportunities of Harvard; because I wanted to hear the Ring of the Nibelungs; because I was tired and hungry; otherwise, believe me, I would have been as absent always as I was sometimes.

42-18-81

I cannot avoid being surprised when a white American treats me with courtesy. This is unfair to white folk, because usually they are reasonably polite. But because of memories of a long past and beacuse at times, somewhere, I can be sure of more or less direct insult,--it is this sort of thing that makes living in the United States no unalloyed joy for black folk.

I an thus at once look on the United States as an outsider and continuous visitor, unintegrated into its culture and yet knowing and sharing it. I can see as few others can, they way in which the presence of a depressed class of human beings has distorted and still distorts the social development. My emotional sympathy with this group will doubtless exaggerate its influence, and for this margin of error the reader must make allowance. Nevertheless my total view is worth setting down.

When the free land and resources of America were thrown open to Europe, they became in part a gift to the landless poor of Europe and a gateway to freedom of speech, freedom of belief, and freedom from want and fear. But the presence of Indians and Negroes as low paid labor, depressed by slavery and caste, also made this continent a boon to producers of basic material in the world-wide demand, which were exchanged into capital goods and became the foundation of a new capitalism out of which developed an Industrial Revolution.

Thus both individual freedom and exploitation of labor developed side by side in America and were confused in world thought as differing aspects of the same expanding culture. This was possible because Negroes came to be regarded as not human in the same sense as whites , and as thus presenting no challenge to humanity or religion. When modern capitalism, built on the slave trade and slavery began to raise Europe to Wealth and Power, the white workers of both Europe and America, began also to feel the pinch of poverty in the midst of progress and struck back in an organized movement of laborers, which gained them political power and elementary education; and in America developed into an attempt to limit the area of slave labor and especially to keep from the slave system the vast free land acreage of the West.

Economic power in the United States opposed this with an attempt to preserve slave labor and the cotton and sugar which it used, and extend its area not only in this country but also to the Southwest and the Caribbean area. This aroused an organized anti-slavery movement, helped by fugitive slaves, and white laborers, in the north who sought to get rid od slave competition. Civil War ensued, which resulted in victory for the North, when the Southern slaves, encour ged by the North, began to desert the plantation and even to enter the ranks of the Northern armies as soldiers.

42-13-82

Dilemma thereupon faced the nation. It had not at first fought to free the slaves, but to prevent the spread of slave labor in competition with free labor. It accepted slave help to win the war and emancipation as a war measure. Now it was faced with 4,000,000 poor and ignorant freedmen. What was to be done? Both Philanthropy and decency demand d for these victims of 250 years of expolitation and degradation, a system of adequate unemployment with decent wages, civil right; a minimum of land and tools and education. An attempt was made toward this, first in education by the more democratic

churches and then a government bureau was proposed, in whose charge the freedmen and white refugees were to be placed and trained for full citizenship. This was a great start toward dreal democracy in the United States, without color caste and with full economic opportunity. It was stopped and frustrated by Threat and Compromise: by the threat of forcing the former economic and social rulers of the South immediately to share political and economic power with Negroes or to make alliance with the Industrial leaders of the North. If the South had regarded Negroes as human; if it had seen abolition as a benefit instead of as a threat; it would have consented to build a New South on equality, democracy and education. This effort the nation should have helped generously, considering the losses and distress of war. But no substantial part of the South would consider this for a moment. Thw whole training of the South for centuries had been toward aristocracy and slavery. The overwhelming majority wanted past conditions restored as nearly and completely as possible. They envied the rich North. They hated "Niggers."

42-1B-83

But by 1885, the United States entered upon its fabulous modern career of the greatest industrial nation on earth. Business enterprise was free of practically all moral, conventional and religious restraints. Americans lied, stole, murdered, lynched and mobbed. Their untrammeled exploits became world legends. But wages rose, comforts multiplied and the national standard of living increased. The poor boy who rose from poverty to wealth beyond the dreams of averice by any sort of cheating and lying he could use; the errand boy who came to rule andempire of business assisted by violence and murder; the industry which extended over the nation and reached Europe and Asia by high-jacking and deception; the technique which performed miracles unheard and undreamed of for manufacturing millionaires; this was America. This was white supremacy.

Big Business consolidated its power in the last quarter of the 19th

The industrial leaders of the North were equally indifferent or even immune to democracy. They had come out of the war with wealth, monopoly and privilege. Protected by tariff legislation, ships and railroads, new machinery and the latest technique, the North stood tip-toe on the vastest expansion of industry the world had known. The white South, both former masters and ambitious poor whites were asked to promist not to touch the tariff, not to scale the national debt, and to give the nation control of industry, without state interference. In return for this, the South was tacitly assured that they could treat black labor as slave in almost everything but name. This bargain was consumated in 1876, after a hectic decade of struggle when the temporarily enfranchised Negroes put up a tragic and hopeless struggle to enter modern democracy as free men, despite their handicap of ignorance and poverty. Their effort did not wholly fail. It succeeded in many ways. This success doomed it.

42-18-84

White American labor, war-weary and confused accepted this compromise, convinced that Negroes were not their equals and failing to realize how this exploited minority would help to keep down their wage. To the disfranchised Negro was added 1861 -1900, 14 million white immigrants who flooded the labor market, lowered wage and living standards and precipitated a new civil war of labor and capital. In 1877, the white world looked on complacently, drugged by the upswing of capitalism the world over, now developing into colonial imperialsim, and rationalizing its Progress on the theory of inferior races working for the comfort and luxury of white Europe. This was exactly what British and French aristocracy and plutarchy wanted before the Civil War and were about to achieve when emancipation threatened to upset their plans. Now with new and triumphant industry in America all this was accomplished and the American Negroes kept in slavery in all but name, so as to encourage no ambitions among the dark serf of Africa and Asia.

century under Rockefeller, Carnegie, Frick and Hill, all of whom were reckless, able and unscrupulous. In opposition to them arose the trade union movement/ By 1894, Industry became a fight of everybody for himself, with monopoly of the necessaries of life as the prizes. Millions of property was transferred from the possession of the many to that of the few without the knowledge of the many nor their consent; without compensation and by falsehood and in violation of law. "Every great fortune that rolled out of the 19th century was rooted in fraud." "In their absorbing passion for the accumulation of wealth," says David Saville Muzzey, "men were plundering the resources of the country like burglars looting a palace."

42-18-85

Meantime, in this same America free individual enterprise was reaching its practical limits. Cutthroat competition, anarch of method, aim and plan was throwing business into industrial chaos. Fortunes were mounting, millionaires multiplying, but the total economy was not safe. Here was a chance for the socialist theories of Europe to be applied and our own dreamers like Henry George began to point this out. But the United States turned to another direction. Through private planning and volunteer combinations, industrial effort continued to be centralized and competition limited. This put curbs on individual initiative. The vaunted American freedom was disappearing and liberals complained. But Business answered that this was in the nature of modern industry and social laws. To which the logical reply was that the State, the legal expression of the Public Will was the natural organ to take over such private industry as could not be conducted efficiently by separate individuals.

To this answer, America would not listen. In 1894, there were already over 400 combinations to monopolize the necessaries of life. The census of 1900 showed that 185 of the combinations with three billions of capital controlled one-third of the manufacturing resources of the nation; by 1908

there were 10,000 combinations with 31 billions of capital. Huge corporations replaced individual enterprise and business increased to vast dimensions. But in such integration, there was not only no democratic control, but as one millionaire said, it was personal or oligarchic rule by divine right, at the hands of those men "to hwom God in his wisdom had entrusted this wealth."

But these corporations, to function properly and completely, had to have certain functions of government: police power, court injunctions, eminent domain in acquiring land and other property, control of money and credit and fixing of wages and profits. To attain such powers, the corporation went into politics: first to prevent democratic government from exercising these functions against monopoly businesses; next to control their exercise by the representatives of industry.

It was not so much government taking overprivate enterprise as private enterprise taking over the functions of government. In Wilson's administration, automobile interests secured $240,000,000 of public funds to promote road-building. Soon the United States had the most elaborate system of roads in the world, ostensibly for the farmers but really for an infant industry set on its feet at public expense. The airplane industry was financed by government funds. The pioneer or investors like the Wrights got next to nothing while financiers reaped fortunes. The same was true of shipping, railroads, radio and other industries. "Pioneering don't pay", said Andrew Carnegie. In many industries which individuals cannot develope, corporations are brought in and become more powerful than the state. Thus United States Steel, United States Rubber and General Motors take over the name and many of the functions of government and yet make profit as private individuals. In some cases, the private corporation or even individuals can perform functions of a public nature which the state is unable to perform; as when the Rockerfellers provide

42-1B-86

a site for the United Nations; or when the Fords televise their proceedings. These may be public spirited acts, but they are public functions and it is a question if wealth should be allowed to accumulate under private control so as to perform work which the Government under democratic control cannot do.

The methods of accumulating private wealth is illustrated by the Tobacco Turst in 1900, 24,000 employees produced 53 billion cigarettes; in 1931, 20,000 employees made 117 billion, but had their average earnings cut from $853 to $613. Meantime the price of tobacco to the farmers dropped from 32¢ to 8¢. while the owners received earnings which increased from 10% on their capital to 25%. The president in 1931 got $16,000 a week; his workers got less than $14.00.

42-18-87

In the case of stealing of Government oil at teapot dome, private wealth by bribing public officials got oil of incalculable value for almost nothing. and in these and analogous cases, this control of industry was effected not by persons investing their own resources, but by the control which banks exercise over these resources. As Justice Brandice said, such control of other peoples money made for recklessness, speculation and the reaping of enormous profits, which the real owners of capital did not share.

Elections we e controlled. Law makers were bribed and even elections of presidents bought, as in the Bryan-McKinley contest. World War burst on this development. We tried at first to stand aside and use the war for profit. Then when we had to enter, we let business profit by handling army funds; in the purchase of lands and materials and in shipping; until the South especially became rich through international disaster.

Of the causes of the First World War, President Wilson said: "The real reason that the war that we have just finished took place was that Germany was afraid her commercial rivals were going to get the better of her, and

the reason why some nations went into the war against Germany was that they thought Germany would get the commercial advantage of them. The seed of the jealousy, the seed of the deep-seated hatred, was hot successful commercial and industrial rivalry."

The cost of the war to us was $35 billion dollars, while the net corporation profits covering this time were $38 billions. Following the war, came a hectic spurt of business, a pause in 1920 and then a wild rush of speculation from 1922 to 1929. Banks and corporations poured supplus cash into the money market and contributed heavily to the campaign of 1920 and 1924 and 1928 which put Harding, Cooledge and Hoover in the White House. Then came the day of reckoning. Black panic engulfed the nation on October 29, 1929; 16 million shares in corporations changed hands in five hours, dragging down million of paper profits. Millionaires became paupers, captains of industry committed suicide and the world stared at the worst depression in modern days.

42-18-88

At the helm of state was the easy going Harding, the [illegible] Cooledge and at the crash, Herbert Hoover. Hoover for 20 years had been a promoter and investor for Britain in Asia, Africa and Australia. He had heavy investments in Russian oil and lumber before the Revolution. In some years he drew salaries aggregation $100,000 a year. As food commissioner during and after the war he helped the war against Russia. As Secretary of Commerce he helped nullify the laws against trusts by furnishing government data to help corporations set prices, which gained him the Presidency, with the help of prejudice against Catholics. As President, he drove the veterans out of Washington, signed the highst tariff in history against the advice of the economists, and when the crisis broke, refused the demands of Congress for aid to the unemployed.

Thus as Capitalism collapsed throughout Europe, our business stood almost competely under control of trusts, international trade was stopped by tariffs, the whole of our banking system stood still, the gold standard began to totter

and ten million American workers were unemployed and facing starvation. Hoover was firm and stubborn. This was but a temporary upset. Our economy was fundamentally sound. "Prosperity was just around the corner." Capital needed temporary help and capital once on its feet would take care of labor.

Then in 1933, Franklin Delano Roosevelt became president of the United States and remained in that position until his death in 1945; 12 pregnant years for the world and years of revolution for America. In the first five years of his rule Roosevelt recognized Russia; put the government in charge of banks; rescued the farmers from bankruptcy by restricting crops, paying bonuses and financing mortgages; giving funds to the banks and insuring depositors; helped build homes and secured five billion dollars for individual releaf of the unemployed. He even sought and encouraged art and literature.

42-13-89

But he did not simply restore business to its former power: he devalued gold as a standard of value; regul ted the sale of stocks and recognised the right of labor to bargain for wages and conditions of work. He started the Tennessee Valley Authority, a government attempt at soil conservation, manufacture, and industrial control in a vast series of river valleys. Above all he tried to regulate all business under a series of codes, with wage floors, standards of conduct and wide voluntary cooperation with government supervision in the background. He even reconstructed the tax system so as to prevent "unjust concentration of wealth and economic power." He established minimum wage in many industries, enacted national social security and national control of communications.

All this was socialism no matter what defination of socialism might be chosen. It was the assertion of the supremacy of government in the conduct of industry and of the right to use in industrial decisions the same democratic procedures used in other political activities. Industry submitted to this at first because of panic and the tottering of all security. Then it began

to fight back against the "Red in the White House." The Supreme Court, long appointed by and representative of business interests, threw out his attempt to regulate industry by codes, emasculated his attempt to refinance farm mortagages and stopped the stabilizing of the bituminous coal industry. Roosevelt attempted to curtail the reaction of these "nine old men" but failed Death and age helped him out. He returned to his efforts to help labor and raise wages, when war loomed in Europe and the United States was again swept not only into world conflict but indeed into world government to an extent which would have driven Washington into hysterics.

Who was this man Roosevelt and what did he try to do? He was not like Hoover a business man and industrial promoter; he was not a New England farmer, slave of convention like Cooledge, a conventional New England farmer. He was a politician but of higher type than Harding or Truman. He was a man of manners and training, with some knowledge of literature, polite society and sports. He was a man of inherited wealth, but not a business man; he enjoyed an unearned income but couldnot conceive making money as a main object of life. He said bluntly: "Plenty is at our doorstep, but a generous use of it languishes in the very sight of the supply. Primarily this is because the rulers of the exchange of mankind's goods have failed , through their own stubborness and their own incompetence, have admitted their failure and abdicated. Practices of the unscrupul us money changers stand indicted in the court of public opinion, rejected by the hearts and minds of men...

"The money changers have fled from their high seats in the temple of our civilization. We may now restore that temple to the ancient truths. The measure of the restoration lies in the extent to which we apply social values more noble than mere monetary profit."

42-13-90

More than most men, his mind was free of economic trammels for he had never earned a living and his training lift him open to new ideas, attitudes and conceptions.

Especially was he willing to learn and take counsel, he called in teachers: he called experts in the social sciences; he called in expreineced business men; he consulted administrators. But especially he relied on men who at first hand knew human beings and their ways and present plight. Thus he secured the experience, hard work and loyalty of Harry Hopkins who supplied the socialist twist to his policies especially for the first five years. For Roosevelt was no theortetical socialist. But he knew that industry was respnsible for much of the muddle which he was called on to solve. He had herd that strong word of his cousin Teddy at Ossawatomie in 1910: "We grudge no man a fortune in civil life if it is honorably obtained and well used. It is not enough that it should have been gained without doing damage to the country. We should permit it to be gained only so long as the gaining represents benefits to the community. This, I know, implies a policy of far more active government interference with social and economic conditions in this country than we have yet had, but I think we have got to face the fact that such an increase in govenrmental control is necessary..."

42-18-91

He turned to science for guidance, but science failed him. Sociology in the United States has not yet taken itself seriously; with Harvard it long hesitated even to call itself a science. I, modestly regarded itself as a collection of miscellaneous facts about human beings arranged in statistic tables or mathematical formulai; but a real science of human conduct was simpy beyond the conception of most teachers of soiiol gy. Human action was viewed therefore either as pure chance or the result of undiscovered or undiscocered law. When therefore Professor Sprague of Harvard was aksed for

guidance in currency reform, he could only say what would happen if men acted according to certain convention , but now men would act, he did not knw. Indeed it wa the firm belief of America that human action was so unpredictable that planning for the tuture on any national scale wasfutile, and every actio must be guidd by individual and local trial and error. Yet most men knew that this attiude was unrealistic and forced on the country by selfish business intrests. This land should and could know accurately the income of all citizensand its source and kine; it could know what taxes each person pays forthe uspport of government; it could know price levels and changes; costs of processing; porpperty and ownership and rents; ownetship of of corporations with income and expense, salaries and dividentds. We could measure sickness and death, education and occupation far more accurately than our hit and miss census methods now accomplosh. With this body of knowledge and a mass of ther data concerning life and deeds of men, we could act and legislate wigh accuracy and not by guess work without infringing any privacy to which men have any essertial right.

42-18-92

But no; we prefer to guess and grope about the distribution of wealth ; about extortion and gambling; about proverty and disease, rather than know the truth and stop stealing and exploitation.

This Roosevelt soon found out and turned from non-existent scientific knowledge to man to man and da to tay experience. He called to council, a gangling Westerner whohad studed sociology under Macey and than gone into social work. He had studied pwerty and charity on the East Side of New York. He lived in social settements, the great Nintteenth centrry effort to know how the other half lived and do something about it. He voted the Socialist ticket. He went to Lillian Walds settlement where I also went. But we never met. There was a great wall between us and his settlement was

"for white folk only". But Roosevelt found him and used him and secured his utter confidence. He found other unof ficial helpers like Howe and trouble shooters like Walker. Then he turned to work after that straight hitting inaugural speech.

He had to consider the banks; the farms, the Home owners, the gold standard; the unemployed; labor unions; stock sales; the recognition of Russia; the Railroads; Motor carriers; the Tax on wealth; Federal control of Communications; Housing; aand Labor troubles mimimun wage and finally war in Europe.

But neither Roosevelt nor his advisers had any overall conception of the ~~enormous~~ ecomocic status of the world and its developemtnt and cure. They had never paid attention to Karl Marx, St. Simon, Fouinor, Robett Owen or Louis Blanc. They had assimilated the American obsession that normal life is industry and all esle unimportant, extraneous to real living. When therefore Business failed the one dutry was to resotore it, rehabilitate it. That the system of industry which the 19th century had raised to world rule had itself collapesed not only on account of world war, but perhaps from subtler reasons. Whether the former industrial set-up could be restored or how it could be imporved or whether it must be replaced--there was certainly questions which all and each called for study and examination. There is no indication that in the United States or in the councils of the government or in the world of science, any such attitude was contemplated. Without hesitation or inquiry it was assumed that the only problem before America was how Industry could most quickly be restored to its former stature and functions. And the reason for this unrealistic and unscientific state of mind was the extent to which the United States was ruled, directed and schooled by organized industry.

42-18-93

Despite this, in the effort to restore industry to its former stature;

and functions. And the reason for this unrealistic and unscientific state of mind was the extent to which the United Staes was ruled , rireced, and schooled by organized industry.

Despite this, in the effort to restore industry to its former stature; in the pragmatic efforts to relieve poverty, reduce unemployment, rescue farmers and home-owners and maintain credit, the goernnment had to take steps toward socialism, even while restoring Business. The government took over control of the banks, when every bank in the land was closed. Here was the opportunity and duty to assume national control of banking, which was following the clear trend of scientific thought. Government ontrol of money, credit and distribu ion of capital was spreading in the world and after the war seemed to most thinkers, even to those who were not socilss'ic as imperative as the postal service,

42-1B-94

Instead of that, the Roosevelt regime poured capit l into private hands as a longtime loan/or a gift and made but hesitant begin ings at comrlete control This was done by ciing governmental power to indust y through the Federal Reserve Board who were private bankers with pu lic power. The security Exchange Act to regula te stock selling was put under the control of a man wh had been foremeost in arranging stoci pools . The attempt to rescue the farmers from bankruptcy followed n part the American isndutrial pattern, which was to raise prices by articfical scarcity. Thus in a hu gry and naked world, we had the extraordinary spectacloe of food being dest oyed and the production of necessary materials curtailed. Yet for a hundred years it had been k own that the earh could provide tof the wants of men, if reasonably distributed. A national survey in 1934, when therewere 12 million u employed and nearly 20 million on relief, reported that there could be plenty for all. But as Roosevelt groped toward that ideal, in that same year, the superintendent of schools of Gary, Indiana, that Steel Trust Town,

made headlines and secured investigation by Congress when he declared that certain members of the "brain trust" had confessed to him that they aimed at overthrowing our government and establishing Communism in this country. The real underlying effort was to transfer some of the swollen income of industry to the persons who raised basic materials. Big Busniess was ever concerned to prevent abundance of goods from flooding the marker. The New Deal souhg to bring agriculture into this program, because the farmers during the war had so increased production that now farm prices were about to collapse. To do this directly by taxation on business was opposed by Industry, but since it must be done, it was accompli shed by destruction of food and bonus. But the bonuses instead of reaching the dirt farmer, quite often reached only the Junker land monopoly which was applying capitalist methods to farming and r ducing the dirt farmer to tenancy. The attempt to go further and help the small farmer with his mort was sabotaged largely by the Supreme Court.

42-18-95

The most startling measure of the New Deal, was the National Recovery Act, by which the government tried to assume a direct control over the entire business of the country. It did not directly take over industries, but invited representatives to Washington to work out "codes" of fair dealing to be followed. Industries which refused might be put under a "blanket code"; those which violated the code would have the Blue Eagle, symbol of cooperation, taken away. By the end of Roosevelt's first year nearly 400 odes had been drawn up, and 90 per cent of the industrialists of the country were supporting the N.R.A. The terms fixed minimum wages, prescribed hours of labor, abolished sweat-shop and child labor in various industries, and required business men to submit to the examination of their books by government inspectors.

By his craft control, the skilled worker had been able to raise wages until he could live like the petty bourgeois. "He came to share the outlook of the middle classes politically, socially and culturally. He bitterly opposed every expression of class consciousness within the ranks of labor. Red-baiting became his favorite sport."

42-13-96

The New Deal marked a departure in the history of American labor. Until now American labor has clung to its laissez-faire objection to government interference in its business. With one sweep the N.I.R.A. turned it into a semi-public trade unionism. One section of the N.R.A. strengthened organized labor by forbidding employers to discharge men for belonging to a union "of their own choosing." This abolished the "open shop"; nor could the employees be forced to join the "company unions controlled by the employers. The terms of the act were resisted by some manufacturers, under the pressure of public opinion and the threats of General Johnson. Before this act had been thoroughly tried out the Supreme Court outlawed its main feature.

Unemployment was too critical and explosive a matter to be handled entirely by Industry. Here naked socialism entered despite furious opposition. Under Harry Hopkins, 20,000,000 million independent, free Americans received million dollars in doles and were thus raised from poverty, despair and crime. It was an astonishing performance for America and to many seemed the end of the world. Why should a rich land, where everybody was free to initiate enterprise and accumulate wealth, resort to charity in order to survive? The plain answer was that millions of Americans were not free, could not earn a living, and faced starvation; that millions more Americans dependent on the spendings of the presently unemployed faced analogous disaster. The country had no time even to enquire into the real causes of this situation before they must feed the hungry and make work for the idle.

In October, 1933, Hopkins knew that with winter coming on the unemployment problem was bound to become more desperate and that the only solution was a huge work program. Thus by his advice the CWA succeeded state and local programs of relief, and was operated and 90% supported by federal funds. This aroused keen fears of socialism among many. It was one of the broadest programs ever instituted by the United States Government and sought to provide individual work as near as possible to previous employment with pay prevailing wages with a minimum of thirty cents an hour.

The winter of 1933-4 was a terrible [redacted] with severe cold, and later floods and hurricanes. Suffereing was wide spread and the initial appropriation of $400 millions was supplemented by $950 millions to sustain 20,000,00 in distress. In three and a half months the CWA built or improves 40,000 schools; laid 12,000,000 feet of sewer pipr; built 469 airports and improved 529 others; built or improved 255,000 miles of road; employed 50,000 teachers to teach adults open rural schools; built or improved 3,700 playgrounds and athletic fields. Among the 4,264,000 for whom work was found were 3,000 writers and artists. It will take the nation long to realise what was done for American culture by this great gesture before it was sabotahed by organized industry. Indeed under present restrictions the truth may never be known. Borglum the sculptor wrote: "You have the only department that is free to help the creative impulses of the Nation, all other aids take on the character of hard business." This part of the program brought the most bitter criticism and was the first to be dropped.

42-113-97

With the passage of the omnibs work relief bill, there appeared three divisions of the relief program, a general clearing house, the PWA under Ickes, designed to help private enterprise by pump priming; and the WPA under Hopkins, designed to furnish work, regarless of its commercial value; this

program eventually cost $10 billion dollars.

The enemies of the New Deal pounced on the WPA, as a matter of hand-outs to Pan-Handlers; only Roosevelt's popularity saved it; it rescued not only 20,000,000 needy but the manufacturers, shop-keepers and landlords, dependent on them. Desperate effort was made in to defeat Roosevelt by calling him "Bolshevik" and "Communist"; but the president's triumph was tremendous. Hopkins said : I have never liked poverty. I have never believed that with our capitalistic system people have to be poor. I think it is an outrage that we should permit hundreds and hundreds of people to be ill clad, to live in miserable homes, not to have enough to eat; not to be ablt to send their children to school for the only reason that they are poor. I don't believe ever again in America are we going to permit the things to ahppen that have happened in the past to people. We are never going back again, in my opinion, to the days of putting the old people in the alms houses, when a decent dignified pension at home will keep them there. We are coming to the day when we are going to have decent houses for the poor, when there is genuine and real security for everybody. I have gone all over the moral hurdles that epople are poor because they are bad. I don'g believe it. A system of Government on that basis is fallacious."

42-18-98

With private banking now back in power, the currency was re-valued and the wild sale of stocks curbed by the Securities Exchange Act which the banks controlled. Then the plight of the labor unions demanded attention. Their right to Bargain long recognized by all civilized lands was at last conceded by this nation and it was admitt d that coal mines might be run without m machine guns and Pinkerton dectetives. Court Injunctions were curbed in order to induce labor unions not to use their political power and form a real labor party. Then next the dole, came the greatest triumph of Roosevelt's

involuntary socialism, in the T.V.A. This perfectly clear case of government duty in an area of economic endeavor where private enterprise could not enter save with powers of government, had been championed in vain for years by George Norris. It at last was forced through Congress amid the bitter opposition of Industry. For Industry knew that this was the entering wedge for similar projects covering the river system of the whole country and destined to break the private monopoly of public wealth in agriculture, forestry and power control. Franklin Roosevelt deserves credit for this consumation of the life work and fine vision of George Norris.

42-18-99

The President said: "It is clear, that the Muscle Shoals development is but a small part of the potential public usefulness of the entire Tennessee River. Such use, if envisioned in its entirety, transcends mere power development: it enters the wide fields of flood control, soicl erosion, afforestation, elimination from Agricultural use of marginal lands, and distribution and diversification of industry. In short, this power development of war days leads logically to national planning for a complete river watershed involving many States and the future lives and welfare of millions. It touches and gives life to all forms of human concern."

From here Roosevelt went forward to curbing the "unjust concentration of wealth and economic power" by surtaxes on income. This was the most dangerous invasion on the inner control of the nation by monopoly which the President dared. It caused his election to a second term by overwhelming vote of 27 to 16 million votes and an almost unanimous electoral vote. The inner circles of industry were in panic at the spectre of socialism while Roosevelt move to control the Supreme Court and establish minimum wages in industry.

In all his efforts Roosevelt was hampered by Congressional opposition

in the control of wealth. But neither he nor his followers realized just how this opposition got its strength. It was not mainly in the controlled voting of the East and Middle West, but in the utter suppression of democracy in the South. Here the withheld voting power of the Negroes was not eliminated, but was exercised by the white majority; and not by white laborers but by capitalists and employers. Here then could be sent to Congress and kept there to inherit the most powerful committee assignments, the most reactionary defenders of wealth and monopoly. This hard immovable core of opposition could not be met by democratic methods of reason and appeal.

42-1B-100

The plight of the Negroes themselves aggravated the unemployment situation by furnishing a mass of labor which had to accept wage at any level offered. New techniques, new enterprises, mass production, impersonal ownership and control have largely displaced the skilled Negro worker, in tobacco manufacturing, in iron and steel, in lumbering and mining, and in transportation, and have confined their common labor and domestic service to the lowest paid and worst conditioned varieties. In the new textile, chemical and other manufactures, Negroes were nearly excluded. [redacted] as slavery excluded the poor white from paying agriculture, so freedom excluded the poor Negro from rising and expanding manufacture. On the other hand, the world-wide fall of agriculture carried the mass of black farmers more and more to the level of landless tenants and peons, despite heroic help and brave endeavor among the few.

The world war and its wild aftermath, seemed for a moment to open a new door; two million black workers rushed North to work in iron and stell, make automobiles and pact meat, build houses and do the heavy toil in factories. They met, first the closed trade union which pressed them to the wall, and into the low wage gutter; denied them homes and mobbed them; and then the Depression met them.

42-1B-101

In the Depression, Negro workers, like white workers, have lost their jobs; have had mortgages foreclosed on their farm and home; have used up their small savings. But in the case of the Negro worker, everything was worse in larger or smaller degree; the loss was greater and more permanent; technological displacement begun before the depression was accellerated. The unemployment and fall in wage, struck black men sooner, lasted longer, and went to lower levels. In the rural South their education almost ceased, while Southern city schools were crowded to suffocation.

Above all, in the Negro's case, local and Federal relief helped him last. It was easily explicable human nature that the unemployed white man, and starving white child should be relieved first by local authorities who regarded them as fellowmen, and regarded Negroes as sub-human. Moreover, it might happen that while the white worker was given more than relief and helped to his feet, the black worker was pauperized by being just kept from starvation; and even when finally plans are making for national rehabilitation, and the re-building of the whole industrial system, such plans called for decisions as to the Negro's future and his relations to industry and culture in this country which the country was not prepared to make, and therefore refused to consider.

The basic problem of the "New Deal " was whether to make its objective an effort to "restore" former "prosperity" or some more fundamental change in the essential economic structure of the nation to bring greter stability and economic justice. If it was the first, there was not much hope for the Negro. He simply could look forward to being "restored" to a situation in which his propects for economic development were growing less and less. If Southern agriculture was to be put on its feet again by government aid, the Negro would remain mainly the tenant farmer and exploited casusl laborer.

If the great industries were to be similarly "restored," the Negro would still be the reservoir of unskilled labor with uncertain employment and low wage. And the restoration of banking and credit would mean comparatively little to a poverty stricken horde of laborers.

On the other hand, if the relation of industry to labor in general was to be overhauled and readjusted, if the whole relation of the farming industry to the other industry of the land was to be carefully readjusted with regard to prices, methods, machines and markets; if unempl yment was to be eradicated by shorter hours, mimimum wage, the forbidding of child labor and the arrangement of old-age security, if these and similar measures were going to change radically the basis of American life, then the American Negro barring gross discrimination, was going to have with a "New Deal" a new change to improve his condition . And only so. Wages was supposed to overblance the increased cost of production. But the first blow to Negroes came when farm laborers and domestics were not included under the protection of the codes drawn up under this act. Thus three million Negro workers, more than half of the total who must work for their livelihood, were not covered by the industrial codes. These three million are the backbone of the Negro consumer market. For them an immediate rise in prices will mean additional insecurity and suffering. Furthermore, in certain a reas where uniform minimum wages have been established for black and white workers, employers have replaced Negroes with whites rather than pay them the same wages.

42-18-102

A colored investigator's report on a visit of 200 textile mills in November, 1933, concluded that there was equally as much Negro unemployment due to labor discrimination as to poor business conditions. Whites had replaced Negroes in many cases, and no mill work and very little domestic work was available for Negro women. The local relief funds were small and

the distributors local whites; with many relief agencies supplying the needs of the white families before attempting to care for Negro families, and everywhere a grave differential in the relief allowances between whites and Negroes.

In the lumber industry, 23 cents an hour was the code wage established for the Southern branch of the industry where Negro labor was largely used and 40 cents an hour for the North and West, manned by white labor. In the Steel code, the minimum wages previously paid Negroes in Alabama was adopted and many employers started a drive for differential wages for Negroes generally. Where these were not granted, there were considerable numbers of Negroes discharged rather than pay them the same wage. In addition then to the legislated inequalities of many of the N.R.A. Codes, Negro labor was subjected to ingenious discriminations permitted by their loop-holes. As Kelly Miller said "The Negro suffers not so much from the enactment of law as from its unfair immediate administration."

42-18-103

A white Southerner, writing the the NASHVILLE DAILY TENNESSEAN declared in October, 1933, that the Negroes of Nashville and other Southern cities "were not being benefited by the N.R.A. but on the whole were sustaining an economic set-back." Extreme examples may be cited where in one county of Georgia, where 300 Negroes who were receiving 50 cents a day were discharged when a code fixed wages at 30 cents an hour. In Birmingham, Alabama, white retail grocers drew up a code of their own of $6.00 a week for Negro porters and delivery boys. In Arkansas, white farmers sent their sons to the C.C.C. camps where they received $30 a month and replaced them with Negroes at $10 and $15 a month.

This is a typical picture of what the Negro got economically under the major effort of the New Deal to raise the average worker out of the depression.

Thus the New Deal not only met opposition of concentrated wealth based on Negro disfranchisement, but also increased the opposition of white labor by increasing or failing greatly to decrease the number of poor and unemployed Negroes whose plight threatened the white standard of living. The result was violence and race riots.

Instead of decreasing in wealth and power during the crisis of 1929-33, America's sixty richest families were strengthened while masses of citizens were reduced to beggary. And even though many people have since been lifted from extreme low economic levels by some restoration of employment, the basic inequalities, issuing from no fundamental differences in skill or merit, remain as great as ever. Paralleling re-employment, which reduced the aggregate of joblessness from about twenty million in 1932 to about ten million in 1937, fantastic dividend and interest payments have been automatically returned to the top income group of not more than six thousand adults.

The United States has not only nurtured the wealthiest class history has ever known, but it has also spawned an immense, possibly permanent, army of paupers--the unemployed. One expects to find millions of impoverished in backward economics such as India, China, Japan, or Czarist Russia. In the advanced economic and cultural enviroment of North America, with all its natural resources, the phenomenon is tragically absurd.

Fewer than twenty per cent of the people possess nearly everything while nealy eighty per cent own practically nothing except chattels. Wealth itself has become monopolized.

Of 1,300,000 Americans who died in 1933, Lundberg says only ten thousand or .77 of one per cent, left taxable estates of $50,000 or more. There were 43,000,000 persons gainfully employed in the country in 1933 but only 3,600,000 could be taxed effectively despite a lowering of the tax base

42-18-104

to $1000.

The President said in his second inaugural address: "I see one third of a nation, ill-housed, ill-clad, ill-nourished". The Bureau of Labor Statistics and the Natuional Resources Committee showed, in depression years, that nearly one-third of all American incomes were under $750 a year and nearly a half under $1,000. Since then the national income, in dollars, has increased even though the dollar has decreased in value and yet eight million American families andindividuals in 1948 reeceived cash incomes of less than $1,000. THE NEW YORK TIMES, admits "relatively few of our population can save enough during the ost useful working years to sustain them during the years when they are too old or too feeble to work."

42-18-105

The resistence of Big Busniess to the Roosevelt New Deal was unremitting in 1944, Aubrey Williams said: "the fight against the Security and Exhange Commission which required them to 'tell the truth about what they were selling;' the Wages and Hours Act which provided a living wage; and the Labor Standards Act which prevented them from throwing a man into jail for asking his fellow worker to join a union." They don't like it, to destroy these and other laws enacted in behalf of the people, they have undertaken to poison the people against the pwoples government. They have marked for destruction:

The Wages and Hours Act
The Fair Labor Standards Act
The Fair Securities Exchange Act
The Fair Employment Practices Commission
The Federal Communications Commission
The Unemployment feature of the Social Security Act
The Farm Security Administration
The Production Credit Administration
The National Housing Administration
The Bank for Co-operatives
The Tennessee Valley Authority
The HOLC

It is not clear where this progress toward a welfare state would have ended, if the world had not again been plunged into war. Roosevelt was

42-18-106

aroused by the danger of the conquest of the British Empire by Hitler. It was this threat more than any conception of the place of the United States in international industry and trade that seemed behind his desire to enter war. Nor was his grasp of the international plight of industrial organization enlarged. Rather the world situation looked to him as primarily political.

All his education and social conditioning went toward his primary effort to save British culture. He forced the nation into virtual war before war was declared, furnishing battle craft and "lend-lease" of material to bolster the tottering empire. Russia entered but casually into his thought, although he had as one of his first official acts as president ended our silly refusal to recognize the Soviets. But in 1939, Russia seemed to Roosevelt negligible; he accepted the current American belief that the country was essaying an impossible economic experiment, doomed soon to inner collapse from starvation or revolution. Neither he nor the British made any real effort to make alliance with Russia.

"It is significant, also, that Mr. Roosevelt himself meant--or said he meant--by the New Deal, not 'a new social order' so much as the safeguard of the old against the malpractices of evil men. And with all Mr. Roosevelt's remarkable and courageous experiments, with all his amazing hold upon public opinion, it was tragically evident, after his death, that if he had influenced the ordinary man's conception of Americanism, he had been unable so totransform it that there was any general perception of the need for a 'new social order.' His successor, President Truman, as well as his Republican opponents, returned, almost without knowing it, to the ideology of that Americanism from which, as they seemed to assume, the New Deal had ben simply a temporary deviation."

The chief Republican paper, THE NEW YORK HERALD TRIBUNE, in April, 1934, declared that the administration's policies had been a sucsession of unrelated and hastily devised remedies and that "so far from producing a planned economy, the New Deal has produced an economic chaos, with no end in sight." It called for an end to extravagant spending, tinkering with the dollar, price and wage fixing, and "the mad effort to subject every industry to a code, whether suited to such regulation or not."

When Sumner Wells was sent to sound out Europe on peace, Russia was not included. Roosevelt did not feel that such a visit would be of any use and regarded Russia as a certain victim of Hitler. He said that once in the early days of communism, "I recognized that many leaders in Russia were bringing education and better health and above all, better opportu ity to millions who had been kept in ignorance and serfdom under the imperial regime. I disliked the regimentation under communism. I abhorred the indiscrimin te killings of thousands of innocent victims. I heartily deprecated the banishment of religion."

42-18-107

Roosevelt did not at the time understand in the least the intricate problems that faced the Soviets or the situation which forced the war against Finland. Thus although both the British and Americans knew that Hitler was planning to attack Russia no plans were mentioned to secure Russia's help which was not regarded worth the effort. Churchill forcast the march of Hitler through the Balkans, Russia and even "to the gates of India."

Lend-lease was debated two months and was admitted as necessary to save Britain, Greece and China, open permission for the President to include other countries, especially Russia brought sharp opposition. There was a hard fight and compromise was suggested but the President was firm and got the power to extend lend-lease to the Soviets if Hitler or Japan attacked

her. Fortunately Hopkins was put in charge of lend-lease, where he eventually spent $60 billions of dollars.

Stalin in 1939, had no faith in the ability of Britain , France or the United States being able to stop Hitler. He hated Hitler but saw no way to keep Russia out of war save for a non-agression pact with the Nazis. Every effort has been made to obscure the role of Russia from 1933 to 1939. Yet the facts are clear: when the Nazi revolution came Russia tried to insure world peace. She joined the League of Nations, made mutual aid treaties with France and Czechoslovakia, urged sanctions against Mussolini in his attack on Ethiopia , aided the Spanish republic, helped China against Japan and asked for an international conference against Hitler after his seizure of Austria. Had this Russian initiative been followed, World War II, would never have occured.

47-18-108

But France and Britain refused because such a policy would have protected Russia and they wanted Hitler to conquer Russia and remove this menace to world capitalism which they had triedto eliminate since 1917. The United States also refused cooperation with Russia, although Roosevelt was dissatisfied by this attitude. He was hald back by Congress, the State Department and the Catholic Church.

Western Europe hoped that Hitler would leave it in peace while he attacked Russia. For this they were willing to give up the League of Nations, give Manchuria to Japan, let Germany re-arm and take Austria and Czechoslovakia and the Rhineland; give Ethiopia to Italy and Spain to Franco. Our own Bullitt said "It would be the wish of the democratic countries that armed conflict would break out in the East between the German Reich and Russia... Germany would be obliged to wage a long and weakening war." The Dodd Diary says that Britain, the Nazis and Bullitt favored dividing

the world, with Germany dominating all of Europe. Japan was to control Asia.

But in March 1939, Hitler made it clear that he proposed to attack the West before crushing Russia. Britain and France were dismayed but persisted in seaking to appease Hitler at the expense of Russia. Britain proposed a curious pact: that Russia should undertake "if desired" to fight Germany in case Germany attacked Poland or Romania; and this after Poland had refused to permit Russians on her soil. There was no suggestion that England would fight Germany if Germany attacked Russia, and naturally Russia refused such a commitment. A month later, Chamberlain, although refusing to visit Russia proposed a Soviet alliance but with no commitment, as to the future of the Baltic states which had for 20 years had been the spearhead for Western conquest of Russia.

42-113-109

He finally sent a minor official to Russia by slow boat, with power to agree only to "consultation" in case Russia was attacked. Roosevelt could take no action, but a member of the United States staff in Russia gave Germany every encouragement. Finally in July, Chamberlain agreed to a "military mission to Moscow" composed of men of no standing and no power. Because of Britain's refusal to make a treaty of mutual assistance, the Soviets determined to make alliance with Germany, if they could obtain defence of their own frontiers in Poland and the Baltic states. This was no agreement to share the loot of Poland, since Germany had already determined to take poland; this pact enabled Russia to seize so much of Poland ~~wx~~ as would ensure her own defense against Germany; nor was any other procedure possible, since neither Poland nor England would consent to Russia's defense of Poland.

Already in May, France and Britain knew that a German-Soviet treaty involving seizure of Poland, would follow failure to make a treaty between

Russia and the West. They refused to do this, and instead in January, 1940 Britain and France agreed to wage war themselves on Russia in Finland and the Soviet oilfields in the Southwest. They had a hundred thousand troops which Sweden refused passage in March; after the Soviets and Finland made peace, the French and British staffs continued to plan war against Russia in the Caucasus oil fields.

42-18-110

Meantime, in November, 1940, Russia tried to sound out Hitler in accord with his proposal of a more extended alliance, but already Hitler without knowledge of many of his trusted advisers had determined to fight Russia, in August. War began in June, 1941. While war is waging all thought of its cause is submerged in the all-out struggle to win. And when in addition the expenditures of war solve problems of unemployment and profit, then danger mounts with victory and is at the same time disguised.

This was the case of Roosevelt in the Second World War. His and the nation's attention was diverted from fundamental domestic problems to saving Great Britain and a personal devil called Hitler came to stand for all evil. But behind the phenomena of Hitler and Mussolini, lurked and festered basic problems analogouswhich were the worst counter-part of those which caused the crash of 1929 in America. The economic organization of the world had cracked widely if not permanently. In that world organization America had played an essential role, not less important because it was industrial rather than political. To recover from collapse effort on a world scale with world planning was essential. The United States attempted the impossible task of national and internal recovery, separate from world adjustment. On this theory the socialism of the New Deal was based and could at best have been but partially successful. But it was a forward step and was leading straight to international effort, first by tariff reduction and then by economy

planned for the world and not just for America. This tendency-Fascism halted by attempting the restoration of world economy not by fundamental change byt simply by changing the beneficiaries of the system; Germany and Italy were to share equally in the profits of colonialism and world trade. To intensify and integrate this demand both these lands effected a new internal distribution of wealth which was a national but not international socialism.

American recovery had no international aims and small national transfer of wealth. But there had appeared in Russia a new international socialism which both Fascism on the one side and the dictatorship of organized wealth, in the United States and Britain feared. After a world war to crush Russian Communism, failed because the organizations of world industry which it was protecting broke down, every effort was made to effect a modus vivendi between the German and British control of world trade. It would have been successful had not megalomania, approaching insanity, taken grip on Hitler. He began to conceive himself not as equal partner of the industrial giants--Britain France and the United States, but as concueror of Russia and master of the world. He accomplished recognition and full partership in world industry so easily during the years of industrial disaster that in 1939, he entered arrogantly on his vaster and more fantastic mission.

42-1B-111

He determined to conquer France and Britain in turn, and then ignoring the United States, crush Russia and with Japan to work his will in Asia. This wild dream could hate been stopped in its tracks by a combination of Britain, Russia and the United States. But both Britain and France discounted Russia: first they thought her weak and on the verge of collapse because of her planned economy; and second they feared that in case her socilism was successful it might spre d by example or force to the British empire and America.

Both Britain and the United States rebuffed Russia's frantic efforts to make alliance with them and forced her either to ally herself with Hitler or fight the world. The Western world was aghast when Hitler offered Russia the alliance which they had refused. They knew the truce was phoney and so did Russia; but Russia immediately moved to strengthen her western frontier in Polant while Hitler crushed France and had Britain gasping for breath, when the United States rescued her with arms and materials. Balked here Germany turned and attacked Russia. Here was the opportunity of the modern world; immediate and concerted efforts could have ecntained Hitler and Mussolini and united Europe could have held Japan in Asia. But this would have made Russia a co-partner with the erstwhile masters of the world. This, Britain, the United States nor France was prepared to consent to.

42-18-112

Roosevelt secured only neutrality between 1935 and 1937. In 1939, after Hitler had seised Poland and Czechoslovakia, and entered Austria and made alliance with Russia, Congress dropped the arms embargo. In January, 1941 Roosevelt demanded the Four Freedoms--Speech, Worship, Freedom from Want , Freedom fron Fear. In June France fell to Hitler and Mussolini joined to share the loot. Churchhill succeeded Chamberlain and the Battle of Britain began. Roosevelt transferred 50 destroyers to Britain in return for military bases. Congress voted 18 billions of dollars for aramament and established the draft. The November elections returned Roosevelt triumphantly to the White House and in March Lend-lease was authorized by Congress. By June, Hitler had turned on Russia and Roosevelt saw that lend-lease must go to her. He and Churchill met in Mid-Atlantic in August, and framed the Atlantic Charter. In the Spring, Roosevelt closed the German and Italian Consulates.

Suddenly in 1941, Japan began her war of conquest by attacking the

United States in Hawaii, Guam and the Phillipines and the British in Hong-Kong. In February, 1942, Singapore fell and the Japanese flag swept over 6000 miles from the Aleutians to Australia. It was the greatest uprising of Asia since Genghis Khan.

The amazing uprising of Asia against Europe was implemented by the attempt of Japan at imperial expansion over Asia to oust European masters. December 7, 1941 the United States fleet was attacked in Hawaii, 8 battleships and 10 other ships were sunk and 3000 men killed or missing. The Japanese then struck at the Phillipines, Singapore, Hong Kong, the Dutch East Indies and the Islands of the Pacific. They stretched their empire thousands of miles in three months. Siam fell, then Guam, then Wake Island. The Phillipines gave up in May, by this time the Japanese had spread over Malaya, the Dutch East Indies, Burma and Singapore; they had sunk two British battleships. The Japanese fell into the trap of the Allies in February and overcame it. They captured the Dutch East Indies with their oil and rubber, they took Rangoon, the capitol of Burma and Mandalay. MacArthur gave up the Phillipines and sailed to Australia.

42-18-113

To me the tragedy of this epoch was that Japan learned Western ways too soon and too well. She had a fine culture and an industrial technique unsurpassed in workmanship and adaptability. The Japanese clan was an effective social organ and her art expression was unsurpassed. She might have led Asia and the world into a new era,, But her headstrong leaders chose to apply Western imperialism to her domination of the East, and Western profit-making instead of Eastern idealism. If she had succeeded it might have happened that she would have spread her culture and achieved a co-prosperity sphere with freedom of soul. Perhaps. But in her headlong effort to conquer Asia, she affronted both the British Empire and American

Big Business. That spelled her doom for they had the military might and the wealth, while her arrogance toward Asia gave her no help from those millions ready to follow her lead but as men not slaves. But Japan is not dead. She bides her time. If she learns well she may yet lead new Asia.

42-18-114

The United States was scared out of its isolation and declared war against Japan, Germany and Italy in 1941. All wanted the United States to win, but some also wanted Russia to lose, other wanted England to lose and many wanted Roosevelt to lose. Now America, Britain and Russia could unite for victory; but there were difficulties; America had to prepare for War and Big Business went on strike.

There were three phases:

1. The "sitdown" strike of the corporations which refused to go into production of both the defense program of 1939 and the first wartime program of 1941-1942.

2. Profiteering and robbery of the American people; manufacture and delivery of defective airplane motors, copper, wire, bullets and other war materials, resulting in endangering the lives of American soldiers.

3. The secret cartel deals by which the biggest American corporations supplied nations soon to be our enemies with materials and information, and kept America unprepared.

The rubber famine lasted for years because Standard Oil had suppressed the artificial rubber patents; the aluminum shortage arose because the Mellon interests were in a cartel with the Nazis; the steel interests refused to expand. The Allied nations, notably Britain and Russia, held the military lines at a loss of millions of men and homes and billions in treasure, while the United States spent two years getting into production of the instruments for winning the war.

Those owning copper mines made extravagent profits; a billion dollars were spent on airplanes before a single one was delivered; steel plate costing $315 a ton was sold to the government for $400 to $600 a ton; the

government spent over $100,000,000 for nitrates but got none before the Armistice; $400,000,000 was spent on 1900 contracts for shells which never reached the firing line; shipping lines sold ships to the government for $2,000,000 each and bought them back for $300,000.

It was clear why industrial leaders, in business for profit, refused to take the risk of expanding their plants for a war of indefinate length; especially since business in consumers goods like automobiles was booming. Moreover in war production, he faced strikes. His recourse was to demand enormous profit for all he did. This he got while America gambled in death and Britain was at the point of collapse

Hitler with startling change, turned east to conquer Bolshevism and control Asia through Japan, before finishing the conquest of the West. The West awaited with relief and almost with complacency, the quick overthrow of Russia. This would at least give breathing space and a chance eventually to make terms with Hitler by restoring German colonies in Africa and elsewhere with such other compromises as were necessary. And at any rate with the certainty that the threat of communism in the world would be laid for a generation if not forever.

42-13-115

The West was surprised and bewildered by the resistance which Russia exhibited to the fierce onslought of the Germans. The British immediately suggested American lend-lease to the Soviets; it would not save them but it would give Britain longer breathing spell and forward that mutual annihilation of two enemies which might save the world. Roosevelt agreet to lend-lease to Russia and sent Harry Hopkins to Russia. This was a master stroke. The United States found Stalin a blunt, straightforward man, fighting to win a war with a nation back of him. A human nexus between two great countries was established and grew from then until Roosevelt's death and Jimmy Burns tried to "get tough" with Russia and gain by threats what Roosevelt got by

compromise and friendship.

The Russian resistance grew and hardened. The German attack became an all-out struggle of vast proportions. MacArthur wrote in 1942: "The world situation at the present time indicates that the hopes of civilization rest on the worthy banners of the courageous Russian Army. During my lifetime I have participated in a number of wars and witnessed others, as well as study-in great detail the campaigns of outstanding leaders of the past. In none have I observed such effective resistance to the heaviest blows of a hitherto undefeated enemy, bollowed by a smashing counterattack which is driving the enemy back to his own land. The scale and grandeur of this effort marks it as the greatest military achievement in all history."

42-18-116

If the West had responded by an equally strong push on Hitler's bare rear, the war might have been settled in 1943. But the world and its military experts refused to believe their eyes and was sure that Russia must eventually be completely vanquished. Hopkins Wrote Churchill: "There is still an amazing number of people here who do not want to help Russia and who don't seem to be able to pound into their thick heads the strategic importance of that front."

The Western armies stalled hoping that Germany and Russia would destroy each other and thus eliminate the two greatest threats to the restoration of the former world industrial imperialism. They were deceived. Russia proved stronger, far stronger than they thought possible. She conquered Germany and entered Berlin before the Allies invaded France and eight months before the near disaster of the Bulge even the nibbling at Africa began late in 1941 and carried on until 1943. There in June 1943 the Allies tried to take Italy but were held back until 1945. Lord Beverbrook wrote in 1943:

"Can we afford more time for preparation? The Germans have a most powerful army in the East. The Russians used up men and resources at a heavy rate last winter in an offensive which stopped short of its fullest aims. There is always the risk that Japan will stab in the back. It cannot be said that Moscow, Baku or Leningrad are out of danger. It can still less be said that we and the Americans could in any measurable space of time win without Russian assistance." Asia conquered by Japanese refused on Japans' defeat to return to her colonial role. The world had to be recast with Russia as one of the main partmenrs, with Asia starting toward autonomy not simply in political control but in economic independence.

42-18-117

It was here that Roosevelt turned back from war to economic reconstruction and played his greatest role, disastrously interupted by death in 1945. Britain interested in her African and Asiatic empire, turned her strength to North Africa instead of France and Germany. The United States was induced to join in this effort and then strike at the Medit erranean and the Near East instead of Germany. There was shrewd calculation here to appease the certain wrath of Hitler by saving him from defeat in Europe while strenthening British hold on Asia and the near East and using this for bargaining after Hitler's delayed triumph. The sudden uprush and miraculous foray of Japan threw consternation into both Britain and America. Russia instead of figuring as a threat and nuisance who might serve to weaken Hitler, became the one great nation which might wipe out the German menace and contain Japan.

Here Roosevelt rose to statemenship. He set out to build friendship with the Union of Soviets and dragged Churchill with him. The only man in the world at the time capable of getting the trust and friendship of Stalin was Franklin Roosevelt; and he accomplished this by frankness and honest dealing. He knew that Stalin was no fool nor barbarian. He knew that

Russia had demands and was capable of enforcing them. He knew that Stalin kept his word but was not to be misled by flattery nor double talk. Personal conferences were arranged between Roosevelt, Churchill , Stalin and Chiang kai-Shek at Cairo, Teheran and Yalta, and at a cost in sheer physical strain that killed Roosevelt. But it brought peace to the world. MacArthur returned to the Phillipines in 1944 and the greatest naval battle in the war and perhaps in history with 300 war-ships participating again. Russia denounced its neutrality pact with Japan in 1945 and Japan was called upon to surrender or face complete destruction. She refused and was blocaded. On August 6, the first atomic bomb was dropped and on the 14th Japan surrendered.

42-18-118

Stalin demanded a strong attack from the West through France and Germany, with war material to keep his armies in the field; in return for this Russia offered 15 million lives and the destruction of her best in new industrial regions. After peace, she wanted the cordon sanitaire under her control sto that the threat of Western invasion of Russia through the Baltic states, Poland and the Balkans should be allayed forever; and she Western tools and machinery to rebuild her stricken economy after she had delivered the world from the threat of Adolf Hitler.

Roosevelt offered continued and increased supplies; pushed a long delayed Western attack; acquesedin or did not offer the annexation of the Baltic states and in turn asked the entrance of Russia into the war against Japan. This was the story of these four world conferences, which stopped the war and sought to stop all war forever by eventual world organization and understanding. In March, 1945, Roosevelt reported to Congress on Yalta:

"The structure of world peace cannot be the work of one man, or one party, or one nation, it cannot be just an American peace, or a British peace, or a Russian, or a French or a Chinese peace. It cannot be a peace

of large nations-- or of small nations. It must be a peace which rests on the cooperative effort of the whole world.

"It cannot be what some people think--a structure of complete perfection at first. But it can be a peace, and it will be a peace, based on the sound and just principles of the Atlantic Charter--on the concept of the dignity of the human being--and on the guarantees of tolerance and freedom of religious worship."

Tremendous further agreements were necessary and the implementation and refining of those agreed on in principle. Had Roosevelt lived this had every chance of being accomplished, not without friction but with faith, understanding and good will. But at Roosevelt's death, Big Business stepped in on both sides of the seas to stop materials from going to Russia to restore her economy; to seize the industry and land monopoly of the Baltic States and the Balkans; to keep Russia out of the Germany which her blood had redeemed; to renew the fight on a bitter scale on Communism. Here was built the foundations of a Third World War.

42-1B-119

Joseph C. Harsch wrote, in the CHRISTIAN SCIENCE MONITOR, "The Yalta Conference stands out as a conference of decision. The meetings which produced that Atlantic Charter and at Casablanca, Teheran and Quebec were declarations of policy of intents. The meeting at Yalta was plainly dominated by a desire, willingness and determination to reach solid decisions."

Hopkins later said to me, "We really believed in our hearts that this was the dawn of the new day we had all been praying for and talking about for so many years. We were absolutely certain that we had won the first great victory of the peace--and, by 'we', I mean ALL of us, the whole civilized human race. The Russians had proved that they could be reasonable and farseeing and there wasn't any doubt in the minds of the President or any of us that we could live with them and get along with them peacefully for as far into the future as any of us could imagine.

SEVEN CRITIQUES OF NEGRO EDUCATION

1908 - 1938

By

W. E. Burghardt Du Bois
Ph.D., LL.D., Litt.D.

41-2-1

Author of THE SUPPRESSION OF THE AFRICAN SLAVE TRADE, THE PHILADELPHIA NEGRO, THE SOULS OF BLACK FOLK, THE QUEST OF THE SILVER FLEECE, JOHN BROWN, THE GIFT OF BLACK FOLK, DARKWATER, DARK PRINCESS, BLACK RECONSTRUCTION, BLACK FOLK: THEN AND NOW, DUSK OF DAWN

1940

Explanation

Seven times in seventy years ~~— mostly in the last thirty —~~ it has seemed my duty to criticize and evaluate the education of American Negroes. Mostly, but not wholly, I have talked of college training at critical times in the career of various well-known Negro colleges, because I regard the college as the true founding stone of all education, and not as some would have it, the kindergarten. These speeches were made at various times at well-known institutions: one each was made at Hampton, Wilberforce and Howard, four at Fisk, and one ~~to a New England audience~~ (for, albeit not at, Atlanta University). Of the speeches at Fisk only two applied specifically to Fisk; the other ~~two~~ was were of general application, and I made those because as an alumnus I made my Alma Mater my forum. The speeches represent in each case my firm conviction and emotional reaction against certain trends and facts which I wished to oppose or forward. The spoken word is not usually an attractive form of literature shorn as it must be of its responsive living audience. As I looked these talks over, my first temptation was to edit them into a statement of my present views. But on reflexion, it seemed to me better if they were left standing as they are, as a sort of living record of reaction, written out before delivery and set down with some care. They would in a way tell more of what Negroes have been thinking concerning the development of their education especially in the colleges. I am, therefore, publishing these seven talks with explanations of their occasion and some of the results of their delivery.

W. E. B. Du Bois

Atlanta, 1940

A final summation of my philosophy was made here on the 50th anniversary of my graduation.

1906

In 1906 the United States was obsessed with what may be called the Hampton-Tuskegee idea of Negro education. It was in a sense logical and sincere and I would have said in 1900 that I believed in it, but not as a complete program. I believed that we should seek to educate a mass of ignorant sons of slaves in the three R's and the technique of work; in a sense of the necessity and duty of good work. But beyond this, I also believed that such schools must have teachers, and such a race must have thinkers and leaders; and for the education of these folk we needed good and thorough Negro colleges.

For several years I attended the Negro conferences held in the summer at Hampton, with the idea of knitting together in thought and statement, the case of higher education and industrial education. But it was in vain. The resolutions passed by these conferences mentioned everything except the Negro college; for instance, in 1902 under "education", agriculture, manual training, religious training, normal schools and kindergartens were mentioned. There was mention of business, religion, domestic economy and sanitation; but not a word was said about the Negro college. This continued for several years. I did not obtrude my views. After all, I was a guest and after publication of my criticism of Booker T. Washington in the SOULS OF BLACK FOLK, in 1903, I was under a certain suspicion. But I said to myself, "I am going to stop attending these conferences until I am especially asked to speak, and then I am going to say precisely what I think." The invitation came in the summer of 1906. It was with something of that inexplicable but magnificent confidence of youth that I stood before a small embattled Hampton and spoke.

THE HAMPTON IDEA

I have chosen a theme tonight which seems to me most weighty and important -- that contains in a way all the kernel of that message which I have been called to give to men. I am to speak of Self Assertion and the Higher Education: I am going to point out the Great Lack which faces our race in the modern world, i.e., Lack of Energy; and the Great Fear that consciously and unconsciously grips the world lest that Lack be supplied. I want to say that this will be partially realized in the inevitable and needful assertion of the self in each of us -- the self of the race, the self of the individual -- the soul of the man and soul of the man's world. Further than this I particularly wish to impress upon you that this forceful, often rude, but always mighty, assertion of the human self needs a curbing and a balancing -- a niceness of concentering and adjustment -- in fine an education, and an education which is higher and more important and more infinitely meaningful for the world and its wide ideals, than any of the other kinds of important but subordinate training which men must have. And finally, I will say that this strongly asserted but balanced self -- this fully self-conscious but cultured soul will move toward a perfectly definite and clearly conceived goal without faltering or hesitation and from that goal to goals beyond and so forever onward.

This is my theme tonight, and for whatever heresy it contains in time and place I beg your indulgence. For in the world this alone is necessary -- that if a man speak and act, he speak and act the truth and not a lie.

What is it that in the modern world this race of ours most clearly lacks -- what is our greatest need, our greatest failing? At first thought I suppose few persons would agree in the answer to this question: one would say education, one would say wealth, some would think patience and some would think it was ability, especially organizing ability. And yet most of these answers would be comprehended in the one answer which I shall give: Energy. The great Lack of the Negro race and of nearly all the darker races today is Energy, self-assertiveness, the command and use of at least its more conspicuous powers.

Nor is this racial indolence or ease of life, a fault or badge of inferior gift or development. It simply represents a defense of tropical races against a tropical sun. No hurried, worried race could ever have risen out of the blazing suns of Africa -- rather conditions of living there demanded that languid dalliance with nature and her wants which we crudely and harshly call the laziness of the tropics. And this indolence has come down to us by heredity -- not that uncertain and doubtful physical heredity of which we talk far more than we know, but by that immensely more important cause of human rhythmic action which we call social heredity, and social heredity is another way of saying that in general we act and think as our neighbors do and that our closest neighbors are our parents and grandparents. Nor does the lack of energy which we as a race bring down in unconscious imitation of our fathers deserve today to be denominated laziness. We are not lazy; we work, we work continuously; and more of us work than do other Americans; rather this racial trait of ours today shows itself in a certain lack of initiative -- a timidity in doing: a want of self-confidence, self-assertiveness and self-knowledge -- a kind of spiritual hesitation in a world where spirit rules.

Now the world knows this and the American world above all frequently points to it, and yet when the manifest antidote appears, when the remedy is pointed out, when the course of procedure, which will turn indolence into energy, hesitation into confidence, and self-diffidence into self-assertion -- when the well known and world-tried methods of human awakening are mentioned in regard to us and ours, there falls a strange and ominous hush on the voices of the world; and spoken or unspoken, there arises the Great Fear.

Now the Great Fear has been variously named and designated -- it has been called in the past, Mob rule, San-Cullotism, the Yellow Peril, the Negro Problem, and Social Equality. Whatever it is called, the foundation of the Great Fear is this: when a human being becomes suddenly conscious of the tremendous powers lying latent within him, when from the puzzled contemplation of a half-known self, he rises to the powerful assertion of a self, conscious of its might, then there is loosed upon

the world possibilities of good or of evil that make men pause. And when this happens in the case of a class or nation or a race, the world fears or rejoices according to the way in which it has been trained to contemplate a change in the conditions of the class or race in question. . .

And thus today also the Great Fear is speaking among men. It is voicing itself more or less articulately against all the darker races, but more particularly against those of Negro descent. It says in its saner moments: these Negroes -- they are, humanly-speaking, brothers; they have some rights and deserve some opportunities; but deal carefully with them. Put their rights in the background; emphasize their duties -- say little of ambition or aspiration; and above all, watch and ward against the first appearance of arrogance or self-assertion or consciousness of great power. Take the eyes of these millions off the stars and fasten them in the soil; and if their young men will dream dreams, let them be dreams of corn bread and molasses.

There has thus arisen what may be called the soothing syrup attitude toward the race problem. This consists in the frequent administration of sweet and pleasant doses so compounded as to put the unwary to sleep and stop his incessant complaints.

This then, young men and women, is the situation: the necessary indolence of our fathers is unsuited to a more active age and more rigorous climate. Yet the world has always feared itself and particularly feared the unconscious sub-stratum. "When the sleeper wakes," it has ever cried, "Beware!" Consequently, there has risen up a policy of harsh repression and gentle discouragement toward you and me and the children we teach, lest in our awakening from our racial indolence to the feverish activity and self-assertion of this modern age we bring catastrophe upon the nation.

Under such circumstances, what is our duty, particularly our duty toward those children whom we are educating? For education is by derivation and in fact a drawing out of human powers. If the extent and character of this development is itself a matter of world-dispute, how shall we govern ourselves?

First we must carefully understand the age in which we live; above all, we must realize that this is an age of tremendous activity; that today no race which is not prepared to put forth the full might of its carefully developed powers can hope to maintain itself as a world-power. On one point, therefore, there can be no question -- no hesitation: unless we develop our full capabilities, we cannot survive: if we are to be trained grudgingly and suspiciously, trained not with reference to what we can be, but with sole reference to what somebody wants us to be; if instead of following the methods pointed out by the accumulated wisdom of the world for the development of full human power, we simply are trying to follow the line of least resistance and teach black men only such things and by such methods as are momentarily popular, then my fellow teachers, we are going to fail and fail ignominiously in our attempt to raise the black race to its full humanity and with that failure falls the fairest and fullest dream of a great united humanity.

If then beyond peradventure or doubt we must strive to develop this Negro race to its very utmost, making them men and not half men, then there comes the great question How? Here the experience of the world comes to our aid: mere self-assertion -- the crude putting forth of powers of which the boy or man has suddenly become conscious, does not in any case mean the fulness of a man's powers; to this initial energy must succeed the long and careful process of co-ordination and development, the balancing and repression, the inspiration and encouragement. The fulness of this process is a matter of a man's whole life, but the beginning of it and the most important part of it -- the crucial and critical period of its effective fulfillment, is in the years which we call specifically and peculiarly the years of education. And we call the higher education that part of human training which is devoted specifically and peculiarly into bringing the man into the fullest and roundest development of his powers as a human being.

While most persons of all ages would without hesitation admit this definition, yet the peculiar character of each age has stamped and changed the practical application of this higher training. . . Today in European culture we have just passed

a peculiar and striking period of history. Always in all ages there went on co-ordinate with the higher training in human development, a training in the technical methods of earning a living. For life with all its higher ends and aims must be a grim struggle with starvation and exposure. In earlier days the training by which men got food and clothes and shelter was not given in schools at all. The slaves and serfs who attended to this work were not supposed to be subjects for education at all. In the 19th century of our era, however, there came a tremendous mechanical development. So that never before have so many of the physical wants of the world been so well satisfied with so small an expenditure of human energy. On the other hand, development in the higher things of life has naturally fallen behind in this advance -- our system of justice, our political life, our moral standards can scarcely be said to have advanced permanently and perceptibly for 2,000 years.

Naturally now with this tremendous emphasis on the technique of earning a living and with the enormous success in this struggle with the jealous material world, there has come a reflex influence on human education. The first evidence of this is the raising of technical education out of the homes and above haphazard methods, into great schools and into careful methods of training. But the influence has not stopped here. On the contrary, there has come a distinct philosophy of education which makes the earning of a living the centre and norm of human training and which moreover dogmatically asserts that the subject matter and methods of work peculiar to technical schools are the best for all education -- that outside them there is properly no higher training. Longer training a man may have, but no higher -- the highest and best training is that which enables a man to earn a living.

Now it is this particular philosophy of education from which I have come here frankly to dissent and to express my dissent to you as teachers as strongly as I am able. And I do this the more willingly, because Hampton is the center of this, as I regard it, educational heresy, and because with all the striking history of this school, the noble lives given to its upbuilding and the peculiar efficiency of its

present organization, there is always present a tone which, as it seems to me, contradicts and almost sneers at the wonderful ideals which founded this great school.

Of course I know that this characterization of the Hampton philosophy is largely a matter of personal interpretation, and yet, in an institution where the President of the United States can with applause tell young men not to hitch their wagons to a star, but to a mule; -- where the sincere old man who spoke on this platform three days ago, can say amid laughter that the great duty of a minister is to teach his flock to raise a good dinner; and where around all and in all, there is an insistence on the practical in a manner and tone that would make Socrates an idiot and Jesus Christ a crank -- in such a place it seems to me no infringement of the rights of hospitality to say that I believe that this doctrine is so fundamentally false as to call for a word of warning.

I know that all these incidents I have mentioned are capable of an interpretation which has its measure of truth. I know that the great duty before you and me and our people today is to earn a living; and yet -- and yet, there is in these doctrines an ineradicable falsification of truth and human history, and I am alarmed not so much that you are going to be misled by the untruth lurking in the truth, as I am alarmed at the case of the students you teach: no one can go through Hampton and believe that the world is simply bread and butter -- they know that it is earth and air -- the wonderful, gleaming sea, and the verdure of flower and fruit; but when you as teachers, have learned a certain Hampton way of expressing yourselves, I am wondering and anxiously wondering, just what picture of the world and life your students are getting.

Now I have said that in order to match the great demands of this age we need to throw off our indolence and use and develop every power that God has given us, and that the higher education is a method of developing these powers. Does this mean that college-bred men, trained in the technique of industry, receive as a matter of fact nothing broader than this? By no means. There is a sort of false distinction

in these matters that has grown up and which does mischief. The college training is supposed to be chiefly ornamental and partly useless; interesting to such as have time, money, and inclination, but otherwise not to be indulged in. On the other hand, industrial training is accused of confining itself to purely technical work after a fashion which is simply untrue of any industrial school.

As a matter of fact the college curriculum or the curriculum of the industrial school depends not so much on its content -- on its actual studies, as on its aim. The aim of the higher training of the college is the development of power, the training of a self whose balanced assertion will mean as much as possible for the great ends of civilization. The aim of technical training on the other hand is to enable the student to master the present methods of earning a living in some particular way. Incidentally the college may and often does give some technical training; incidentally and always the industrial school teaches more than mere technique. It is no criticism of the college to say that its graduates are not technically efficient, just as the industrial school cannot justly be criticized for not turning out men of culture.

41-2-10

But the attitude that we as Negroes must take toward these two kinds of training is this: just as far as the race can afford it we must give to our youth a training designed above all to make them men of power, of thought, of trained and cultivated taste; men who know whither civilization is tending and what it means. The ideal would be to train every man in this way, and toward this ideal we tend. But today only a few can have such training because the time and labor of most men is needed for providing for the world's physical wants. Consequently we must select the most promising for this broader, higher education; and I sincerely hope that you will ever be alert to select from your students those of talent and promise and impress them with the fact that life is more than living -- that necessary as it is to earn a living, it is more necessary and important to earn a life: that is to do for the world -- its thought, its aspiration, its human value, so much that the world will not always continue to ask if life is worth living.

Impress it upon your pupils that potatoes and cows are only valuable because of the heaped up sacrifice, the midnight musing, the morning dreams of men who did not have potatoes enough to keep them alive. Send these talented boys to college -- urge them and push them through, remembering that never in God's world is this Negro race going to hold its place in the world, until it shows by its fully developed and carefully trained powers its undoubted ability to do so. This fact is true. Men know it is true and I am particularly sorry that the college-bred men who write the Hampton conference resolutions have never found courage to say in this matter what they really believe.

After we have sent our most promising to college, then not only the rest, but the college men too, need training in technical schools for the actual technique. Hampton Institute, instead of giving the world the impression that she has no use for college training, ought systematically to attract colored college graduates to post-graduate courses in technique; indeed just as the colleges need technique to complete their training of men for actual life, so the sad and crying need of industrial schools is men with culture and training enough in the broader humanities really to profit by the great technical opportunities of a plant like this.

When now we have gained for our race training in modern industry and for our national leaders, self-assertion through a higher training in life and thought and power, then we can move toward the goal. What is that goal: it is at present one great Ideal: the abolition of the color line; the treatment of all men according to their individual desert and not according to their race. This is the one straight way of the Lord, despite all the devious paths which our friends and enemies suggest. Toward this I am pointing you tonight, my young friends. Toward this the voice of Ages points -- a voice crying in the wilderness, "Make straight the way of the Lord."

ENVOY

This was said in 1906 and it was not until 1936 that I was invited back to Hampton. The Hampton folk of 1906 were outraged at my words. Many considered that I had abused their hospitality. But I thought at the time that I was speaking the

truth; and as I read the speech over today there is not much that I would change. When I went back to Hampton in 1936, behold, Hampton had become a college and was wondering what to do with her industrial equipment! Indeed so complete was the transformation, that in after years I again took Hampton to task for surrendering the Hampton idea so entirely.

1908

It was in a spirit of stern and lofty criticism that I spoke at Fisk University in 1908, twenty years after my graduation. Much had happened in those years and even in the two years since I had spoken at Hampton. Erastus Cravath, the fine and stately first President of Fisk, died in 1901. In accordance with missionary custom a retired minister was put in his place. It was an unfair task to put upon James G. Merrill. He was a kindly man 68 years of age and did not recognize the change taking place in Negro education. The old afflatus of Reconstruction times and the crusading teacher had gone, and the problem of supporting education by passing the hat was beginning to appear. He was not equal to the task; few people were. Indeed in the end the whole scheme broke down. But Dr. Merrill thought he saw a ray of light. My college school mate, Maggie Murray, became the second wife of Booker T. Washington in 1893. Dr. Merrill thought that through Washington's influence some help might come from monied interests to Fisk University; and to lure this philanthropy he proposed to make certain changes in the Fisk curriculum. Abruptly in the catalogue of 1906-07, Fisk advertised a new department of "Applied Science". This was to be accomplished by a modification and enlargement of old courses and by the introduction of new ones aggregating over 2,500 hours of instruction additional per year. The money was furnished by the General Education Board, the citizens of Nashville, the Slater Fund, and others. There was added to the faculty an associate professor of agriculture and associate professor of mechanic arts. The college work in this department consisted of five courses in agriculture including animal husbandry, plant breeding, structural botany, and rural engineering. In the mechani-

cal arts, came practical courses in architectural drawing, woodwork and the theory of machines. In domestic science and art, came cooking and sewing. In 1907 and 1908 the teachers of agriculture and mechanical arts became full professors. Two women directed cooking and sewing in both these years.

On the face of it, the proposed department did not look genuine. First of all it was going to teach agriculture without a farm and on the limestone rocks of the city of Nashville. In the second place only two teachers were detailed for all this work, and they were teaching not simply college students but high school and even elementary students. There was no machinery or adequate laboratory. Two other persons who had long been teaching cooking and sewing in the high school and normal courses were regarded as parts of this new department. There was no way in which this proposed department could be regarded as the beginning of a technical or engineering school of college rank. At best it was a poor imitation of what Hampton and Tuskegee were struggling to do. All this seemed to many of the alumni and to me as a Surrender and a Lie; the surrender of college training to the current industrial fad, without the honest effort and equipment which this entailed. We were alarmed. We were fighting for academic life. We were striving for the survival of the Negro college in a day of starvation and ridicule. A current anecdote going the rounds was true enough to be false: one dark collegian asks another: "Is you done yo' Greek?" I remember that George E. Haynes, a graduate of Fisk, then a student in the New York School of Social Work and afterward founder of the Urban League, came to me hot-foot in Atlanta. He said, "You are sure to be invited to speak on your twentieth reunion. You must help save Fisk. She is surrendering to industrialism." I was excited and my crusading spirit aroused. Perhaps we were over-fearful, but I thought then that I was stemming a tide, and so I spoke to the graduating class.

GALILEO GALILEI

The man whom we know as Galileo was born in 1564 and died in 1642; born just after Elizabeth of England ascended the throne and died as the Thirty Years' War was about to end; and yet this tells us little until we understand the meaning of

the Age in which he lived -- the waning 16th and the dawning 17th centuries; and unless above all it happens that we catch tonight the peculiar way in which his life and problems concern us and our problems both as individuals and as graduates of Fisk University.

Galileo was born of noble rank in Pisa which we all know for its leaning tower and bronze doors, but which stood then for a memory and a prophecy -- a memory of former glory of artist, merchant, and warrior, there where its marble palaces cunning in handiwork looked down on the Arno and the Sea.

He became a learner and teacher of men and in this life career what did he accomplish three hundred years ago? The simple unexplained record is in itself wonderful; he found the law of falling bodies, he invented the telescope, he discovered the moons of Jupiter, he explained the reflected light of planets; he laid down the laws of cohesion, he studied the law of the pendulum and applied it to the clock, and above all he adduced irrefragable proof of the correctness of the Copernican doctrine that the sun and not the earth is the centre of our universe. Simply and barely stated this accomplishment is tremendous. To few human beings has it been given, in a life of four score years, to advance so momentously the sum of human knowledge. But this bare recounting does not do justice to his genius. Judge this World Genius not simply by the things he learned, but rather by the ignorance of his Age. This was a day when falling and gravitation were things too slight for human minds to ponder over; when the sky was regarded as a decorated changeable roof of the world; when time depended on sundials and hour glasses; and when the grand old legend of Joshua and the sun in Ajalon was regarded as a plain and literal statement of fact. It was a day when men assumed knowledge of the whole Truth and argued down to the individual fact, instead of ceaselessly, endlessly, and minutely studying the fact and then guessing as we do today cautiously at the mighty shadow of Reality. Here then was a human soul that walked into this world naked and unashamed, that dared to see what his own eyes saw and think whither his own clear logic. A dangerous soul -- a Revolutionist greater than Robespierre, a

socialist wilder than Marx or Gorky -- a very creator of a new heaven and a new Earth.

And here if I were minded I might end with this triumph record; and with a dim hint at jealousy o'erpassed and persecution surmounted, of physical blindness and suffering ignored, celebrate a triumphant death in the year of Newton's birth; and tell of the tomb that sits today in Florence to his honor -- there where the golden Arno fragrant with memories sings to the sea beneath the olive-crowned marbles of Lorenzo the Magnificent.

But it is in such half-finished biography that men do mischief in the world and blind the eyes of young men and women like these graduates here. It sweeps dust in their eyes and discord in their ears, and to the eternal thunder of the questioning, "How?" it returns only the answer to the answered question, "What!" Easy it is to tell what men have done in this world -- Lincoln freed the slave, Grant freed Lincoln, and Hamilton made us a nation. But how -- How? asks the men who will do. Stars there are; them we see and know, but -- How do men reach them -- what of the Way, the Power, and the Opposition?

So in Galileo's life I want to turn now to three things: what was the Impulse that gave him power to do? What were the Obstacles he encountered? And How did he surmount them?

The impulse was a new vision of the world. From the time of Dante in the thirteenth up to the blossoming of Petrarch in the fifteenth Italy had been seeing life anew. Galileo was child of this awakening. The impulse behind him was the Wonder of an open mind at the mechanism of the universe. Two things in the world are ever Miraculous -- thought and motion. After the death of the dark age, the European world awoke in the Italian Renaissance to a sense of the Wonders of human thought -- their own keen speculation and the marvels of the rediscovered thought of the ancient world; then imperceptibly, the Things thought of displaced the thought of the thinking and motion, form, movement, held the attention of men and the genius

of Galileo. Something of the same thing has happened in our day; the schools have long studied Human Thought in literature, logic and speculation. Today has come attention to the more neglected wonders of the Things round us and the technique of the world. With eye and imagination thus fixed on the mystery of motion in falling body and whirling earth and moving star, Galileo started to know, to observe, to prove, to dream.

In so doing he met the Opposition -- the obstacles that ever block the way of the man who proposes in thought or deed, something New. First it took the cruder and uglier form of jealousy. We tell but half a truth to young men and women when we say do well and you will be successful. They are apt to interpret success in term of the world's applause and it is not true that the world ever applauds well-doing. In his own alma mater, the ancient University of Pisa, Galileo did well as student and professor of physics at the early age of twenty-five. But his new teachings offended a man. If that man had been an ordinary mortal, it might not have mattered; but he was Giovanni de Medici, prince of a princely house, and in three short years, at the very outset of his career, Galileo was out of a job. A year later he was called to the University of Padua and finally to Florence itself. The students of all Europe flocked to him and his inventions and discoveries spread his fame. And as his fame rose, so rose the jealous opposition.

And now men said not that he offended man, but that he blasphemed God. Blasphemy, heresy, transgression of the Dogma of the Catholic Church, were serious things in the Sixteenth Century. They meant disgrace, poverty, persecution, and death if known and proven. At first then the thing was whispered as jealous rumor, then it swelled to an open war of pamphlets and books; sermons were preached and formal denouncement of the heretic was made. The Holy Office, which we know as the Inquisition -- that dark and cruel child of the Reformation, with its servant the Society of Jesus -- took up the matter, and finally the opposition culminated in a summons to Rome and trial before seven Cardinal princes of the Holy Catholic Church.

Such was the Impulse and such the Opposition. Whither was the Path -- the way through, which Galileo pursued his journey to the End? When the man who has a clear

vision of Right, finds himself successfully approaching the goal, how shall he meet the Jealousy, Error, Selfishness and Ignorance? The world has given many answers to this, perhaps the greatest moral problem that rises. Tonight I have to tell the answer that Galileo Galilei gave: For 50 years:

He hesitated;

He explained to his friends;

He conciliated his enemies;

He promised to cease;

He argued

and finally at the age of 70

He lied -- he deliberately and with full knowledge; publicly and unequivocally he made one of the straightest and most uncompromising denials of what he knew to be the truth ever recorded and, as the legend is, sealed that falsehood by a whispered statement that he knew he was lying.

I am at present neither defending nor condemning Galileo. I am simply stating the case, and showing you the way in which a man whose service to humanity is unquestioned chose to save his life. For a long time Galileo had been successful in dodging the main issue, namely, Does the doctrine that the sun is the centre of our universe contradict the Bible? He was full seventy years of age when he was finally brought to trial. It was an imposing sight: on the rear wall of a room in the great palace of the Vatican, rose the soft outlines of a famous fresco of Raphael. Before it stretched a long, crimson coated table. Here sat the prelates of the church in their gorgeous robes -- the bishops of seven seas, the princes of the greatest human organization in modern times. A golden cricifix adorned one end and the other held seven golden candlesticks with their lighted tapers. Before the table stood two scarlet cardinals, and a corsetted soldier with drawn sword. In the midst kneeled Galileo -- a little old man of seventy y ars, decrepit, and half blind. With palsied hands and trembling lips he said these words:

"I, Galileo Galilei, of the age of seventy, being on my knees in the presence of you, most eminent and most reverend Lords Cardinals of the Universal Christian Common-

wealth, having before my eyes the holy Gospels, on which I now lay my hands, swear that I have always believed, and now believe, and God helping, that I shall for the future always believe, whatever the Holy Catholic and Apostolic Roman Church holds, preaches, and teaches. But because this Holy Office had enjoined me by precept, entirely to relinquish the false dogma which maintains that the Sun is the center of the world and immovable, and that the Earth is not the center, and moves; not to hold, defend, or teach by any means, or by writing, the aforesaid false doctrine.

"Therefore, being willing to take out of the minds of your eminences, and of every Catholic Christian, this vehement suspicion of right conceived against me, I with sincere heart, and faith unfeigned, abjure, execrate, and detest the aforesaid errors and heresies, and generally every sect contrary to the above-said Holy Church; and I swear that I will never more hereafter say or assert, by speech or writing, anything through which the like suspicion may be had of me; but if I shall know any one heretical, or suspected of heresy, I will denounce him to this Holy Office, or to the Inquisitor and Ordinary of the place in which I shall be. I moreover swear and promise, that I will fulfill and observe entirely all the penitences which have been imposed upon me, or which shall be imposed by this Holy Office. But if it shall happen that I shall go contrary (which God avert) to any of my words, promises, protestations, and oaths, I subject myself to all the penalties and punishments, which, by the Holy Canons, and other Constitutions, general and particular, have been enacted and promulgated against such delinquents: So help me God, and his Holy Gospels, on which I now lay my hands."

Thus he spoke; but as he rose from his knees some say he whispered, "But it does move." Nine years later the blind and aged sufferer after long imprisonment and torture, died.

Students and graduates of Fisk University, let us judge this man: on the one hand range his service to mankind: his discovery of the great laws of motion in the solar system, and on the other place the cowardice of his lie; the advantages of a

on the other

mechanical knowledge of the universe and the necessity of faith in one's fellow-men as the foundation stone of society; which is the greatest? Which is the sorest wound to human progress -- the loss of a valuable body of knowledge or the voluntary misdirection of human faith? A blow at the upbuilding of Truth or a blow at its very foundations?

Science is a great and worthy mistress, but there is one greater and that is Humanity which science observes; one thing there is greater than knowledge and that is the Man who knows. In the midst then of society whose life blood is faith, and in the name of Science which will know the truth that the truth may make it free, the verdict of civilization must be, that not even the splendor of the service of Truth done by Galileo Galilei, can wipe away the blot of his cowardly lie. By that lie, civilization was halted, science was checked and bigotry was more strongly enthroned in its crimson glory. And for what? To aid the discovery of truth? No, for Galileo's great work was done twenty years before he was tried for his life. No, it was for the sake of nine years of pitiable blindness and suffering for an aged and broken man who did not dare to die for the glory of a great cause and make it thus more glorious in his courageous death.

Nor did he lack example. Only 43 years before his birth, a German monk had faced Christendom for one principle and cried when they shrieked, "Retract", -- not I will not, but "I cannot do otherwise." In the midst of Galileo's young manhood, right there in Rome, Giordano Bruno almost the very same age of Galileo, a defender of the same Copernican system, and unswerving searcher for truth, suffered himself to be burned alive after seven years in prison, rather than to lend himself to a lie to the glory of the Church.

Did it pay? Was the truth worth a lie? Which was the fool, Bruno or Galileo? I know that in this my judgment I speak today to ears that hear faintly and to hardening hearts. And with reason, for I speak to an age that differs from and at the same time resembles Galileo's. His age was beginning to see and sense and appre-

ciate the rhythm of Things -- the miracle of motion, the sweep of space and the dominion of matter; we today emerge from a century steeped in the awe and worship of Matter, triumphant in its mastery, insolent in its prophesy. Despite our strongest endeavors a shade of contempt for mere thought and theorizing, for feelings, emotions, and principles tinges our culture and our life. Two miracles the world holds, as I have said: Thought and Motion; and the Age of thought which was the age before Galileo forgets the miracle of Motion; and the Age of Motion which is our age condemns the miracle of Thought. Yet above contempt and neglect sweep both as the ultimate Wonder of Life and woe to the world that blasphemes them.

02-2-14

Today and on us the pressure is tremendous. What is the world, cries the present Philosophy? It is the growing of grain and the weaving of cloth, the moving of wheels and the building of walls; it is the ability to do, the earning of livelihood, the creation of wealth. And then by natural logic this doctrine advances and says, if this is Life, train men for life in natural ways: not by Latin and Greek, but by arithmetic and mechanics. Is this philosophy false? No, but almost as dangerous, for it is half-true. As one-sided as the world that stood in judgment over Galileo and said: With the Bible of God and the Logic of Aristotle to read, what else is there worth studying in the world? The influence of this dogmatism has lasted until our day. There can be no doubt that the college curriculum of the past generation shamefully neglected the World of Things -- the tangible visible universe and its laws and ways. It is certain that in the University of tomorrow, the field of knowledge will include a knowledge of what the present world has done and is doing with its physical resources as well as a knowledge of its Thoughts and feelings. For this momentous change in curriculum, all true educators are looking and preparing; but this does not mean a stampede to industry as a substitute for life -- to mechanics as an antidote for thought, or to technique in place of Reason.

Simply because in the world of education, we are fighting for change and larger fulfillment of true prophesy, does not mean that any industrializing of a college curriculum, or any substitution of hands for brains, is the true heralded change.

For it may easily happen (and this is the gist of my message) that a mere specious and popular promise of longer and easier life, may prompt the Galilean spirit of 1908, as it did in 1608, to seek to establish the mechanical success of the future building by tearing down the spiritual foundations of the past.

Many men would argue in judging Galileo: Are not the laws of Motion worth a lie? Is not the support of a great Negro College worth some deception or surrender? But the Spirit of the Ages answers, No. The foundations which Galileo's lie threatened, were of more infinitely difficult building and perfecting than the great discoveries he made were worth. In travail of soul and gushing of blood; in anger, hatred, sorrow, and strife; in the rise and crash of empires, from Egypt and Babylonia to beautiful Greece and imperial Rome -- on all this was the world-Kingdom of Law and Order and Truth raised. They only can speak lightly of the change from the Time when each man flew at every one's throat, to that when we safely look for Universal Peace among all nations -- they only lightly pass that vision by who never knew of the raging billows of sorrow and blood through which this world has staggered to this goal. Which is greater, the discovery of the telephone or of universal suffrage? That man is mad who hesitates to answer. So then when a man offers a discovery for a lie, or Education for a bribe, then must the watchman on the outer wall cry Halt -- In the King's name!

And you graduates of Fisk University, are the Watchmen on the outer wall. And you Fisk University, Intangible but real Personality, builded of Song and Sorrow, and the Spirits of Just Men made perfect, are as one standing Galileo -- wise before the Vision of Death and the Bribe of the Lie. Not that I for a moment suppose that anyone now in authority here proposes any decisive change in the attitude or meaning of this University. But the personality of an institution is a peculiar thing. The apparently isolated -- almost unconscious movements of individuals, guided by the outside pressure of powerful interests, easily bring that to pass of which they themselves had not dreamed. And so today this venerable institution stands before its problem of future development, with the bribe of Public Opinion and Private

Wealth dangling before us, if we will either deny that our object is the highest and broadest training of Black Men, or if we will consent to call Higher Education that which you know and I know is not Higher Education. And I say we, in this case advisedly; for my brothers and sisters, if this happens: if the ideal is lowered or the lie told, the responsibility rests on us. We are the University -- we on whose brow it has laid immortal hands, who wear its sign and seal upon our forehead. For us the trustees hold this property; as our representatives these teachers teach. If this republic of letters suffers harm, the guilt lies on us and on our children's children.

41-2-22

Three gifts a graduate may bring back to his Alma Mater -- a gift of Gold, and surely today this is needed, for more and more the burden of Negro education is destined on Negro shoulders, and the support of a College like this will eventually come from its alumni. Yet the gift of Gold is not possible to us all, nor is it the greatest gift. The second and greater gift is the gift of Accomplishment -- of things done, success achieved, knowledge advanced and fostered. Too little of this proof of our training have we brought to Fisk, but a full glorious return did Galileo make to Pisa. Yet this is not the greatest and in making the Greater Gift, this Man missed and marred the greatest. For the greatest gift that a scholar can bring to Learning is Reverence of Truth, a Hatred of Hypocrisy and Shams, and an absolute sincerity of purpose. And if after twenty years we of the class of '88 return with little Gold, with but pitiable accomplishment, -- God grant we bring to this altar, the incense of clean hands and unbending devotion to what we know is the truth.

First of all then, the thing for which we stand must be clear. We are not opposing industrial education. The vocational training of children is one of the greatest and most promising movements of modern days. But the place for that kind of training is not the College department of Fisk University. To do this would be like using a surgeon's knife for chopping wood. The world needs wood but it has axes for cutting

it. There are good and deserving schools for trade teaching. There are but two or three colleges. These colleges are devoted to higher training and they must not be diverted from it. But it may be asked are not technical and mechanical courses of study possible subjects of higher training? They are. The college course of the future is going to be enriched by the inclusion of many courses based on the technique of modern industry and the physical properties of matter. But that does not mean that every part of such knowledge is fit for the college curriculum. The milking of cows is a worthy industry but it is not a cultural study upon which any honest college can base its bachelor's degree. On the other hand the great chemical and physical laws which underlie the making of many food products are matters which could profitably be treated in a college course. And the decision as to the adaptability of certain lines of thought or bodies of knowledge is not a thing to be arrived at by majority vote or racial prejudices, but is a matter of expert study.

If Fisk University wants to know what technical and engineering subjects are fittest to a College course -- there are in the United States, France, and Germany, hundreds of universities and other institutions of the very highest standing, whose curricula have been matters of thought, study and development among the best educational philosophers of the world; learn of these and copy their courses and hold their standards. But if, on the other hand, the standards of a great Negro College are to be set by schools of lower and different object, whither are the ideals of this University falling? If you find that you cannot give technical courses of college grade, then give high school courses or kindergarten courses and call them by their right names. There may often be excuse for doing things poorly in this world, but there is never any excuse for calling a poorly done thing, well done; -- of denominating a series of lessons in the training of servants, a course in mechanical engineering.

You will, I am sure, pardon this frank warning and exhortation. The times are perilous. A stubborn determination at this time on the part of the Negro race, to uphold its ideals, keep its standards and unceasingly contend for its rights, means victory; and victory a great deal sooner than any of you imagine. But a course of

self-abasement and surrender, of lowering of ideals and neglecting of opportunity -- above all, a philosophy of lying in word or deed for the sake of conciliation or personal gain, means indefinite postponement of the true emancipation of the Negro race in America, for the simple reason that such a race is not fit to be freed.

High above the yellow marbles of Florence glistening among the shining olive leaves hangs the ancient church of the Holy Cross. Below it winds the yellow Arno past Pisa to the azure of the Midland sea; and beyond the Sea lies Africa. Once in the past the surging billows tossed a Florentine barque aloft on the thunders of a Storm. All seemed lost in the purple blackness of the night: with wild voices the sailors prayed to all the Saints of Florence, till suddenly one cried -- "A vision -- a vision: The Holy Cross," and pointed far aloft where seemed to gleam the marble splendor of the Florentine Church. They whirled the ship toward it; it leapt and dashed itself to death on the black and beatling rocks full fifty miles from where, in far off Florence, the Church of the Holy Cross raised silently its towers to God. And beneath these towers slept and sleep the bones of Galileo Galilei.

ENVOY

The reperoussions of this speech were immediate. President Merrill resigned in the summer. I was sorry for that. I did not mean this for a personal attack. I was attacking a system and a tendency. The professor of mechanics was dropped in the fall, and the "Department of Applied Sciences" disappeared in 1909. In 1910, Booker Washington joined the Board of Trustees and remained a member until his death in 1915. But he was not active and brought no additional funds to Fisk. It was many years before the philanthropy of the North was willing to support higher education among Negroes with anything like generosity. From 1908 until 1925 Fisk had a severe struggle for existence. Perhaps one cause of this was my speech.

41-2-24

1910

It was the last year of my first sojourn in Atlanta University where I had taught for thirteen years. Academically our success in these days was marked. Our graduates were among the best teachers of Negroes in the South; principals of schools and professors in colleges. Tuskegee without their assistance could not have kept its doors open. They were beginning to enter the professions. Their careers and those of their fellows as shown by our initial study of the college-bred Negro was remarkable and encouraging. We had begun at Atlanta University the first systematic study of the American Negro made anywhere in the world; and yet Atlanta University was starving to death. Its support, its funds were dwindling. It had continually to retrench. It was threatened with debt. Dr. Bumstead, the calm, hardworking apostle of the Negro college of the day, was giving his whole life to collecting funds and once in a while I left my teaching to go North to help him. On a certain occasion I spoke to the white rich and well-born in Brookline, Massachusetts, and tried to impress upon them not simply the use, but the indispensable need of the college-bred man in the South. I was speaking no longer with magnificent confidence of young manhood or the harsh criticism of mature years, but as a social scientist and observer convinced of my facts.

THE COLLEGE-BRED COMMUNITY

Atlanta University is primarily a college. To be sure it has a large high school connected with it and an efficient normal school; but the students in the normal school are all of college rank, and the high school is retained because there are no public high schools in Georgia for black folk. The center, therefore, of our work in Atlanta University is the College. To the up-building of this Department our chief energies are directed; by the results of this Department our work must be judged; and on the basis of this Department we ask the support of the philanthropic world. Probably no other institution in the world is so entirely a Negro college as ours and certainly none in the South has as large a proportion of college students. We are, then, primarily a college. When, now, this statement is frankly made, there are a great many people who wish to help good causes in the world, who wish us well, and who with equal frankness decline to contribute to our work. They say plainly, "We are not interested in giving black boys college training. We think that the class of Negroes who have reached the plane where they can profit by such higher training have also reached the plane where they do not need outside aid. Such people, white or black, can be left to themselves to make their own way in the world." They say, "We are interested in the submerged classes of those poor people who are struggling up out of the depths. Such people we want to help, but, on the other hand, while theoretically we would be glad to help all people to a broader vision, yet on account of limited ability we are obliged to confine ourselves to cases of pressing necessity; therefore, we cannot give to Negro college work." If, now, the assumption thus stated be true, I would not only not blame philanthropists for refusing to support Atlanta University, but I would go further and change my own work; because the work which lies nearest my heart is not that of the talented few in opposition to the needs of the submerged many. But I have come here tonight purposely to set before you argument which proves to me, and I trust will prove to you, that the assumption which I mention is false, and that the first step toward

lifting the submerged mass of black people in the South is through the higher training of the talented few.

There are many of us who are still surprised, not to say indignant, that it took ten years of Reconstruction even to begin the settlement of the problems raised by slavery and war. Such people strongly suspect that only the incompetence and rascality of the Reconstruction politicians can explain such an extraordinary fact. And yet, when we come to consider the matter, how few of us realize what slavery meant in the South! To kidnap a nation; to transplant it in a new land, to a new language, new climate, new economic organization, a new religion and new moral customs; to do this is a tremendous wrenching of social adjustments; and when society is wrenched and torn and revolutionized, then, whether the group be white or black, or of this race or that, the results are bound to be far reaching.

When, therefore, you say that the South had a system of slavery for 250 years, you mean that the victims of that system lost their own social heritage; gained new bonds binding them to a new community, and began to forge in that new community, new machinery for carrying on the new social life; or, in other words, religion, moral customs, family life, economic habits, literature and traditions were taken from the Africans. They became a part of a rigid caste system, out of which they could seldom legally rise, and their social organization among themselves was reduced to the barest minimum for existence.

When, after two and one-half centuries of storm and stress, the race was adjusted to these new social environments, there came abruptly a new revolution. That revolution ushered them into what was called freedom; the social heritage and the bonds which tied them to their community were again broken, and they were left with no machinery for carrying on their social life. Or again, to make the matter more explicit, the Negro was freed after he had lost his own native traditions and moral and economic habits and had only begun to learn other habits from his master. Moreover, as a freedman, it was made increasingly impossible for him to learn such things from his masters because he was separated more and more from the master-class.

Thirdly, having forgotten or never known the methods of modern organization, it was quite impossible that he should immediately take up and guide the development of his own institutions.

What, now, was the one great pressing need? Of course this need has been variously expressed and emphasized. To some the first thing that freedom meant was work; to some it was a release from the bonds of poverty; to others it was education and the organization of religious institutions. But yet I think if we consider the matter, all of these reduce themselves to one single thing, looked at from different points of view; namely, what the Negro needed was experience, i.e., a knowledge of how the world accomplishes its necessary work today. And when you say that the freed Negro was ignorant of this, you mean more than mere illiteracy -- for illiteracy is the cause of evils rather than the evil in itself. You mean more than shiftlessness and unmoral customs. In fact, you mean all these things together and other things added, which in the total show that the Negro did not know the accumulated wisdom and methods of the world in which he was asked to take part. Now, how was he to get this unknown experience and wisdom? There were people simple-minded enough to suppose it was a mere matter of teaching him to read and write. I remember meeting a good friend of the race not long since who said with a rather puzzled expression that he "did not understand why all Negroes were not fairly well-educated, since they had had primary schools for a generation." He was doubly wrong; first, because as a matter of fact, not one-third of the Negro children have primary schools. Primary schools are simply one means of making education possible. The chief and great method, of course, by which a people come into the great social heritage of the modern culture world and by which they gain close and efficient knowledge of the methods of the world's work is the training which comes primarily and essentially from human contact -- a contact of those who know with those who are to learn.

Now, the great mistake which some of you and many others make, when they talk and think about the South, is to assume that there are in the South the same facilities for the transmission of culture from class to class and man to man as exist in the

North. If this were so, then my argument today would be quite out of place. But I come to emphasize in your minds a thing which you all know; namely, that racial separation in the South means the voluntary and persistent isolation of those who most need to learn by race contact. People who have easily and rather lightly accepted a programme of race separation in the South have, I fear, seldom thought of this. In the North, of course, in the last twenty-five years, the development has been exactly in the opposite way: it has been toward greater and more frequent and broader contact of the more favored classes of society with the less favored; a contact not simply in matters of alms-giving and economic organization, but in all of the deeper matters of human interest. The result of this is that Northern people are apt to assume that this same great social movement is in progress in the South, and consequently when there comes from the South word of certain kinds of movements, they assume that these things are in addition to the natural growing contact of the extremes of society. Yet you have but to think a moment to know that this is not true. There is in the South a social separation between workman and employer, the ignorant and the learned, society and its servants, the high and low, white and black, which goes to an extent and reaches a degree quite unrealized by those who have not studied the situation.

I pause simply to remind you that white people and black people in the South do not, as a rule, live on the same streets or in the same sections; do not travel together in train or street-car; do not attend the same churches, do not listen to the same lectures, do not employ the same physician, do not go to the same schools; do not, for the most part, work at the same kinds of work; do not read the same books and papers, are not taught the same traditions, and are not buried in the same graveyard.

Now, outside of all questions of the wisdom or necessity for such a situation, the question which interests us today is this: How far and in what way can there be any transmission of human culture and experience or knowledge of social organization

and social methods or of education, in any sense, from the white group to the black? Of course, some such transmission there is and always will be -- it is impossible perfectly to isolate people; but the chance of such transmission is in the South reduced to a minimum.

Mind, I make no argument for or against racial separation. But I am saying, with emphasis: State in your own mind, every argument for racial isolation at its full strength; conclude, if you will, that my child shall not be educated with yours; that it is indiscreet to eat with me at the same table; that you have definite matrimonial plans for your sister which do not include me; and that black people and white cannot righteously worship God from the same pews. Assert these beliefs, either for yourselves or in sympathy with others who passionately insist upon them, and then remember that the stronger this argument is for racial isolation, the more compelling is the righteous demand of black folk for their own social leadership, their own fountains of knowledge, their own centers of culture; and this is not for their amusement or delectation; not to flatter their vanity, but to give them the absolute and indispensable foundation for solid and real advance in civilization and social reform, the uplifting of their masses, and rational guidance in health, work, and morals.

If, then, you propose to educate the Negro into the possibility of full citizenship in the modern world of culture, one thing you have got to admit at the very outset; and that is, he cannot, to any appreciable extent, get that education from the white people about him. Now, this is true, on the whole, of no other constituent part of the American people. If higher college training is asked for poor American boys, for Armenians, or for white mountaineers, it is sufficiently just to say there is at present a more crying need for certain forms of elementary training among these boys than for college training. Their guidance and training in the higher matters of social evolution can be safely left to the result of their contact with the best of their fellow citizens. But with the Negro this is not true. By the silent decree

of the Nation he is, in the South, shut off and isolated. And much of this programme is being easily accepted in the North.

What the Negro needs, therefore, of the world and civilization, he must largely teach himself; what he learns of social organization and efficiency, he must learn from his own people. His conceptions of social uplift and philanthropy must come from within his own ranks, and he must above all make and set and follow his own ideals of life and character. Now, this is putting upon a people just emerged from slavery, with neither time, traditions, nor experience, a tremendous task. In strict justice, it is asking more of this people than the American nation has any right to ask. Nevertheless, this race is not stopping to await justice in this matter; it is not asking about the righteousness of past conduct; it is not even pausing -- as perhaps it ought -- to discuss the advisability of present policies; but it is asking you, here and now, to place in its hands the indispensable facilities for teaching itself those things which it must know if it is going to share modern civilization.

Moreover, just as in justice you cannot ask a man to raise himself by his own boot-straps, just so you cannot logically and justly expect that a people will furnish itself, under such circumstances, with its own chief means of uplift. The natural temptation for a group in our situation is to look around them upon their neighbors, pick out that which in their inexperience seems to be the cause of success and, advancing and seizing it lightly, try to march on. If the thing which they choose is momentarily popular they will receive for choosing it exaggerated applause; just as they were applauded in 1868 for political acumen because politics were popular, just so today they are applauded for showing signs of industrial shrewdness, because industry is the ruling movement today. Now, both politics and industry are the leading and main foundations of every successful state, but the great point is that any people to be successfully civilized must know how to handle those great tools of advance, and they can only learn this from a knowledge of the world's experience through the teaching of a cultured class.

of the Nation he is, in the South, shut off and isolated. And much of this programme is being easily accepted in the North.

What the Negro needs, therefore, of the world and civilization, he must largely teach himself; what he learns of social organization and efficiency, he must learn from his own people. His conceptions of social uplift and philanthropy must come from within his own ranks, and he must above all make and set and follow his own ideals of life and character. Now, this is putting upon a people just emerged from slavery, with neither time, traditions, nor experience, a tremendous task. In strict justice, it is asking more of this people than the American nation has any right to ask. Nevertheless, this race is not stopping to await justice in this matter; it is not asking about the righteousness of past conduct; it is not even pausing -- as perhaps it ought -- to discuss the advisability of present policies; but it is asking you, here and now, to place in its hands the indispensable facilities for teaching itself those things which it must know if it is going to share modern civilization.

Moreover, just as in justice you cannot ask a man to raise himself by his own boot-straps, just so you cannot logically and justly expect that a people will furnish itself, under such circumstances, with its own chief means of uplift. The natural temptation for a group in our situation is to look around them upon their neighbors, pick out that which in their inexperience seems to be the cause of success and, advancing and seizing it lightly, try to march on. If the thing which they choose is momentarily popular they will receive for choosing it exaggerated applause; just as they were applauded in 1868 for political acumen because politics were popular, just so today they are applauded for showing signs of industrial shrewdness, because industry is the ruling movement today. Now, both politics and industry are the leading and main foundations of every successful state, but the great point is that any people to be successfully civilized must know how to handle those great tools of advance, and they can only learn this from a knowledge of the world's experience through the teaching of a cultured class.

The community must be able to take hold of its individuals and give them such a social heritage, such present social teachings and such compelling social customs as will force them along the lines of progress, and not into the great forests of death. What is needed then, for any group of advancing people, is the COLLEGE-BRED COMMUNITY; for no matter how far the college may fail in individual cases, it is, after all, the center where knowledge of the past connects with the ideal of the future. Every community, therefore, must be college-bred; and that does not mean that every individual must be a college graduate; it may be that the proportion of college-bred men may be small, even infinitesimal; and still the community, by tradition and heritage, will hold fast to what the past has taught the world of high and ideal future accomplishment. But, given a group or community which does not know the message of the past and does not have within its own number, the men who can tell it, and is separated from contact with outside groups who can teach it -- given such a community and you have a desperate situation, which calls for immediate remedy. It is such a situation among the Negroes in the South that calls for schools like Atlanta University.

41-2-32

There ought to be in the South today at least five institutions with an endowment of a million dollars each, whose business it would be to furnish the teachers and professional men and thinkers and industrial leaders for the masses of the black people of the South. Such colleges would represent, not the capstone of the social organization of the South but rather its vast foundation. As a matter of fact, such institutions today, tremendously hampered as they are in their work, have, nevertheless, begun this work of giving communities college training and have so far, done remarkably well. To them is due the establishment of the Negro School system in the South with 21,000 teachers; the establishment and conduct of the great and efficient industrial schools; the development and guidance to a considerable extent of the 35,000 Negro churches and the accumulation personally and through their influence of the more than $650,000,000 worth of Negro wealth. It would, of course, be wrong to say that Negro colleges were responsible for every step which the black

man has taken in advance since the war; but it is not too much to say that but for the black men trained in the colleges North and South, and the students who were in turn trained by them, the major part of this progress would have been utterly impossible. Moreover, it is not simply in education that the Negro college accomplishes its mission of human culture. Nearly all the adjuncts by which culture is diffused in the North have been absent among Negroes in the South: the public lecture and public library; the sympathetic newspaper, organized charity and social settlements; the Young Men's Christian Association and Women's Clubs, etc. Today, all these instruments of culture are making their appearance slowly but surely, and they are coming directly from the Negro colleges and from centers of influence where the graduates of such colleges are working. The COLLEGE-BRED COMMUNITY, therefore, in the South is already beginning to be a reality, but it needs tremendous reinforcement and continual impulse.

In the North the ordinary boy, whether he actually attends college or not, gets some college training from his surroundings. It is impossible for a boy to grow up here in Boston without getting from the air which he breathes something of that for which Harvard stands. On the other hand it is possible for a black boy to grow up in the South and be a perfect barbarian. It is for you and me to make this more and more impossible in the future by giving such support to the best of the Negro colleges as will really plant ideals of social efficiency and culture in the center of black communities and enable them to work and save and act according to the best traditions of civilized men.

To the existence of such group development and feeling among black men there can be but one objection, and that is the objection of those people who mean by "race separation" not separation but subordination; who plainly and frankly say that the Negro is to be separated from all contact with culture in order that he may never become an efficient, self-reliant, thinking race; who hope that there shall grow up in the nation, not the democracy dreamed of by the Pilgrim Fathers but a new caste ideal such as was made the corner-stone of the Confederacy. With such objections I am

sure you have no sympathy and I only hope that with your willing desire to help the lowly of all races and peoples, you will use this method of approaching the problem of the submerged mass in a particular race, and through a Negro college, in a larger sense, you will be willing to help a people to help themselves.

ENVOY

To these and similar speeches of mine and appeals of Dr. Bumsted and others, there was some, but not great response. Between 1910 and 1925 the case of college training for Negroes in the South became desperate. I began to feel that one of the reasons that Atlanta University did not get funds was my presence and I therefore accepted a chance to change my scientific career to a career of propaganda in New York with the National Association for the Advancement of Colored People, as editor of the Crisis.

41-2-34

1924

From 1910 to 1924, I was out of direct touch with Negro education. There came the world of war during which I had sent my daughter to Bedale's School in England, thinking the war would be short. She was forced to come home in 1914, and went to the Brooklyn High School. She did not like it. The teaching methods, and the atmosphere were strange to her. She stuck it out and graduated, but was indifferent to a college course. It occurred to me that she might be as thrilled as I once was, if she went south to Fisk. I applied for admission after she was graduated from high school and there was some rather curious and to me inexplicable hesitation, but she was finally admitted. She seemed happy there. She made no complaints. Yet there filtered through certain criticisms of the Fisk of 1924, and once when I was visiting there a student came to me, slipping up almost furtively in the twilight.

It was my first talk with George Streator, then a junior. He said to me: "Don't you want to know what is going on at Fisk?" Afterward I opened my ears. I listened, wrote and investigated, and I was astonished at a state of affairs of which I had not dreamed. When I complained to my daughter for not telling me of conditions, she answered placidly: "I thought you knew!" The student discipline at Fisk had retrograded so as to resemble in some respects a reform school. The administration of the school seemed based on organized gossip. The desperate attempt to get funds had led to a surrender to Southern sentiment compared to which the overtures of Dr. Merrell were but faint and unimportant. The spirit of the school seemed wrong and from time to time teachers, students and graduates appealed to me.

Again it was the date of one of my continually reoccurring reunions. In 1923, I had been graduated thirty-five years. I had not spoken that year because my daughter was graduating the next year; and so in 1924 I came to Fisk University determined to do an unpleasant duty and do it thoroughly. I determined to voice the widespread criticism of alumni, students and friends of Fisk University at the way in which the President, trustees, and faculty were conducting the school and I was going to do it at Fisk, face to face with its officials. And so in the Memorial Chapel with my back to the great organ and with the president and his wife sitting in front of me and the alumni ranged row on row, while the undergraduates looked down from the gallery in suspense, I literally "lifted my voice and taught them saying":

"DIUTURNI SILENTI"

~~Some Latin~~

You who have not wholly forgotten your Latin, will remember that the two words of my subject are taken from the beginning of Cicero's oration in defense of Marcellus. I recall the stilted translation thereof which I committed to memory in my boyhood. "To my long continued silence, Conscript Fathers, which I have made use of in these days, not on account of any fear, but partly from grief, partly from shame, this day brings an end and also a beginning of my speaking according to my former custom what I think and what I know."

~~My Relations with Fisk~~

To make these perhaps somewhat cryptic words more clear to you, may I say a few words concerning my connection with Fisk University. I was graduated from Fisk thirty-six years ago this month after three years of splendid inspiration and nearly perfect happiness under teachers whom I respected and amid surroundings that inspired me. I regarded the ten years after my graduation from 1888 to 1898 simply as a sort of prolongation of my Fisk college days. I was at Harvard but not of it. I was a student of Berlin but still the son of Fisk; and I came back to Fisk to deliver the commencement address in 1898 and to make that address a welcome to my younger fellows into the high calling of those who had gone forth from this institution with fine determination and splendid inspiration.

Ten other years passed and when I returned here as alumni speaker in 1908, there was a shadow as it seemed to me already across this institution. The trend toward industrial education was to my mind beginning to lower the standards and vitiate the ideals for higher college training which were the heritage of Fisk University. I spoke my complaint clearly and sought to warn this institution that it would never do, for purposes of expediency, to lie to the world as

Galileo once lied when he knew that his heart held the truth. This speech of mine was received with much criticism, and from that time to this, sixteen years, I have not been invited to speak at this institution. Once or twice when I happened of necessity to be on the grounds I have been invited to say a few words and have made perfunctory remarks knowing that nothing further was expected. I knew too that my thoughts and ideals were distasteful to those from whom Fisk at this time was expecting financial aid, and as I had neither money nor monied friends I took refuge in silence even when I sensed wrong.

~~My Purpose~~

Today I recognize that my invitation to address the alumni is largely a matter of circumstances and not of deliberate choice on the part of this institution. Nevertheless I have come to address you and I say frankly, I have come to criticise. I have known and been connected more or less intimately with many colored institutions of learning, but I have never known an institution whose alumni on the whole are more bitter and disgusted with the present situation in this university than the alumni of Fisk University today. This, of course, is not true of all the alumni, but it is true of so great and so important a part that Fisk University ought to know it. I have come therefore to criticise and to say openly and before your face, what so many of your graduates are saying secretly and behind your back. I maintain that the place to criticise Fisk University is at Fisk University and not elsewhere; and above all I maintain that this is the time and the critical time in the history of this institution when the opinion of its alumni and constituents must be known and decision must be taken by the trustees and faculty as to the future policy of Fisk University. And it is for this reason that I say: "To my long continued silence, Conscript Fathers, which I have made use of in these days, not on account of any fear, but partly from grief, partly from shame, this day brings an end and also a be-

Galileo once lied when he knew that his heart held the truth. This speech of mine was received with much criticism, and from that time to this, sixteen years, I have not been invited to speak at this institution. Once or twice when I happened of necessity to be on the grounds I have been invited to say a few words and have made perfunctory remarks knowing that nothing further was expected. I knew too that my thoughts and ideals were distasteful to those from whom Fisk at this time was expecting financial aid, and as I had neither money nor monied friends I took refuge in silence even when I sensed wrong.

~~My Purpose~~

Today I recognize that my invitation to address the alumni is largely a matter of circumstances and not of deliberate choice on the part of this institution. Nevertheless I have come to address you and I say frankly, I have come to criticise. I have known and been connected more or less intimately with many colored institutions of learning, but I have never known an institution whose alumni on the whole are more bitter and disgusted with the present situation in this university than the alumni of Fisk University today. This, of course, is not true of all the alumni, but it is true of so great and so important a part that Fisk University ought to know it. I have come therefore to criticise and to say openly and before your face, what so many of your graduates are saying secretly and behind your back. I maintain that the place to criticise Fisk University is at Fisk University and not elsewhere; and above all I maintain that this is the time and the critical time in the history of this institution when the opinion of its alumni and constituents must be known and decision must be taken by the trustees and faculty as to the future policy of Fisk University. And it is for this reason that I say: "To my long continued silence, Conscript Fathers, which I have made use of in these days, not on account of any fear, but partly from grief, partly from shame, this day brings an end and also a be-

ginning of my speaking according to my former custom, what I think and what I know."

~~These Two Theses~~

I come to defend two theses, and the first is this: Of all the essentials that make an institution of learning, money is the least. The second is this: The alumni of Fisk University are and of right ought to be the ultimate source of authority in the policy and government of this institution.

~~Freedom of Spirit~~

Taking up the first thesis I do not, of course, mean for a moment to be so foolish as to say that a university does not need money. Fisk University does need money; any institution needs to day physical equipment, buildings, laboratories and salaries and needs them imperatively; and yet I do maintain that this equipment is not the greater need. I maintain that there is a spiritual equipment without which no institution can really exist as a center of culture, and I trust that it will never be necessary to say of Fisk University as was once said of Brown University: "Yesterday Brown University had a president; today it has a million dollars."

Three great things are necessary for the spiritual equipment of an institution of learning: Freedom of Spirit, Self-Knowledge and a recognition of the Truth. These are trite phrases, but they are none the less eternally true; and first of all comes Freedom of Spirit.

It is a beautiful figure that we continually use in depicting the relationship of college and student; Alma Mater - Fostering Mother. We see always in this true relationship the arm of this old mother about the shoulders of her sons and grandsons and grandsons' grandsons, whispering to their ears. "Behold the beautiful land which the Lord thy God has given thee!" And nowhere is this

inspiration needed more than in the case of colored students today. They come out of the Valley of the Shadow with souls that have been hurt and crushed, and the great duty of the Negro college is to say to these students that the little sordid things of earth and of ordinary life where they lack so much of freedom, are as nothing compared with the great free realm of the spirit.

I have often told audiences of my experience when I went first to see the Bernese Oberland. I stood of the plaza of the cathedral at Berne and looked upon the Alps. I saw the great green hills and rising mountains. They were fine and I was glad. I started to turn away, and then, almost by accident, I lifted my eyes up to the sky, and there, above the hills and above the mountains, up where I had thought of nothing but mists and clouds, blazed in unearthly splendor the snow-capped Alps - sublime, magnificent. And so it is with these colored students. It is inspiration and light and the free, untrammeled spirit that rises above the earth which they seek in college. Through this very freedom comes discipline, and through discipline comes freedom.

~~Present Discipline~~

What now is Fisk University doing to uphold and to spread the spirit of freedom in this institution? It is not doing what it should. In Fisk today, discipline is choking freedom; threats are replacing inspiration, iron clad rules, suspicion, tale bearing are almost universal. A favorite expression is, "If you don't like Fisk University, get out!" If you do not agree with all the policies of the institution, go elsewhere. Students are made to promise in writing not simply to obey the rules of the institution but to obey all future rules that may be made. Even during my short stay of a few days, I have seen crass instances of discipline. At the senior chapel, the last, and as it should have been, holiest exercise, everything was held up for five minutes until the

presiding official publicly disciplined a few giggling girls.

Instances of discipline have occurred here almost criminal in their miscarriage of justice. I have known a girl to be sent home for theft because she could not satisfactorily explain her possession of a five dollar bill; and when afterward it was proven beyond a doubt that the money was rightfully hers, no apology was ever made. She was simply told quietly that she could come back. She has since graduated with honor at Howard University. To illustrate in what glaring contrast the present discipline of Fisk University stands with the discipline of my day let me recall one instance.

I was seventeen years old. Perhaps my older class mates were having fun at my expense, but at any rate I was told that at commencement time the ordinary rules did not hold. I consequently walked boldly up through yonder white gates and invited Dickey to take a walk. (She was called Dickey because her father wanted a son and named her Richard anyway.) We sauntered out the front gate in broad day light, down the long path past Livingston, called at the city home of one of our fellow students, Lizzie Jones, found other students there and danced and ate. Then we walked back in the dying day and came to Jubilee Hall about sunset. It looked as though the roof of the hall was about to rise. The matron was furious. "But I didn't know that I was breaking any rule," I stammered. I was given to understand that I ought to have known, which did not seem to me a bit logical; and then I came before the president. He was a tall, white-haired man with bushy eyebrows and deep eyes, in the depths whereof always lurked a smile. And he said to me quietly, "Don't do it again." And I didn't. He bound me to him for time and eternity by that one wise judgment. He knew perfectly well that if a boy is up to a nasty trick he doesn't walk out of the front gate in full daylight.

I do not for a moment doubt that the objects which Fisk today wishes to gain by her discipline are in themselves perfectly good objects; but the trouble is that she is trying to accomplish her ends by methods which are medieval, and

long since discredited. The second and third generation of colored students present their problems of discipline and guidance, but those problems in the long run are no greater than the problems presented everywhere in the training of youth throughout the colleges of the United States and the world; and of all ways of treating these problems and settling them, the method of piling rule on rule and threat on threat is the worst and most ineffective, and it makes not men but hypocrites.

Fisk University wishes to be recognized by the great institutions of learning, and yet at other institutions students are being taught discipline through freedom. When Bertrand Russell was not allowed to speak at Harvard University the students protested not simply to the faculty but to the overseers, and their right to protest was freely recognized. No protest would for a moment be tolerated on the part of the students of Fisk. If a student even feels disagreement with the policies of Fisk he is given to understand that he is not wanted. It is the spirit of freedom that has built the great universities of the world, and Fisk can never be great until it recognizes that spirit. The pall of fear which envelops the student body of this institution is the most awful thing here.

~~Self-Knowledge~~

The second great thing that characterizes an institution of learning is Self-Knowledge, the principle ancient as Greece and older: "Know Thyself." The students are in college for purposes of self-expression and experiment; to test their own wings, to find ability and strengthen character, to learn self-control. In such self-experience on the part of the young there is a cost to pay, a certain waste that is inevitable; the appearance of youthful swagger and impudence; and yet the wiser world has learned that in youth even as in age the Cost of Freedom is less than the Price of Repression. At Fisk Univer-

sity the temptation and the tendency is to cramp self-expression, reduce experiment to the lowest terms and cast everything in an iron mould. College women are put in uniforms in a day when we reserve uniforms of those who are organized to murder, for lackeys and for insane asylums and jails. Not only is the system of uniforms at Fisk ineffective and wasteful, but its method of enforcement is humiliating and silly.

The students are allowed to do almost nothing of their own initiative. They can have no organization except such as are not simply supervised by the faculty but are in part run by the faculty with membership determined by the faculty, with some long-eared member of the faculty sitting in at every meeting to listen.

There can be no opinion expressed by the students in any public way. If I have any knowledge of the English language and any facility in expression it began with the three years that I spent on the editorial staff of the Fisk Herald. The Fisk Herald was for a long time one of the oldest student papers in the United States. It was a shame to suppress it. Other colored institutions even below college grade and practically all white institutions have their student papers. Fisk University is not allowed to have one. Athletics are hampered and threatened with extinction by faculty action.

Thus self-expression and manhood are choked at Fisk in the very day when we need expression to develop manhood in the colored race. We are facing a serious and difficult situation. We need every bit of brains and ability that we have for leadership. There is no hope that the American Negro is going to develop as a docile animal. He is going to be a man, and he needs therefore his best manhood. This manhood is being discouraged at Fisk today and ambition instead of being fostered is being deliberately frowned upon.

I met a young man the other day in an institution far from here. He walked

up and stuck out his hand and said, "I am Hunter's son." I remembered Hunter in my college days at Fisk, -- a big, strong, muscular black man. He got angry once at some of my pert criticism and gripped me. I thought my arm was coming off. These were the days before the legal "Jim Crow" car law, but the brakemen used to take it upon themselves to force all colored passengers into the smoking car. Hunter went down with the other students after commencement to board the train. The brakeman barred the way to the passenger coach. Hunter swept the brakeman aside with one arm and with the other beckoned the students. They walked into the coach singing. This was Hunter's son. I looked at him with interest. Why wasn't he at Fisk University? Is Fisk University afraid of men of this sort? Is this the kind of person that she expels for impudence? Is Fisk trying to make the roll of her expulsions a sort of roll of honor? Is she afraid to have these students know themselves?

The third thing that a university stands for is the recognition of Truth, the search for Truth. We say this glibly now, but we must remember that in every age while institutions of learning have accepted and taught certain parts of the truth there are other parts about which they have hesitated. For a long time geology could not be taught in our institutions because it interfered with the biblical "six days". Today some people are trying to enjoin the teaching of Evolution; and continually in our day the teaching of the truth concerning our social structure and economic development is being hindered and suppressed. That this is dangerous goes without saying; but the greatest of dangers faces those institutions of the South, white and colored, who are afraid to tell the truth concerning the difficult social environment in which the youth of the South is growing up.

One can imagine, ofcourse, two extreme attitudes which a Negro college might take with regard to the surrounding South; it might teach that the case is hopeless; that no Negro can expect to be a man in this country with the present attitude and determination of the whites. Or it might go to the opposite extreme and say that all is well; that the best thought of the country is tending toward justice and that the Negro's only hindrance is himself. Neither of these positions is tenable, and a real university with honest purpose today ought frankly to face the fact that there are here forces of advancement and uplift and that there are forces of evil and retrogression and that it is for the educated man to find a way amid these difficulties.

41-2-44

Fisk University is not taking an honest position with regard to the Southern situation. It has deliberately embraced a propaganda which discredits all of the hard work which the forward looking fighters for Negro freedom have been doing. It overpraises the liberal white South. It continually teaches its students and constituency that this liberal white South is in the ascendency and that it is ruling; and that the only thing required of the black man is acquiescence and submission. Thus the Fisk News, speaking without right and without warrant for Fisk University, for its alumni and its constituency, is advocating and spreading a doctrine which every student in this university knows is dishonest. They know and they appreciate the things which the white friends of humanity living in the South are doing, but they know that these liberal white folk are not triumphant, that they are facing a terrific wall of prejudice and evil; and every day these students in their lives are experiencing this evil. They know "Jim Crow" cars; they know the effects of disfranchisement; they know personal and persistent insult. You cannot teach these children honesty as long as you dishonestly deny these truths which they know all too well.

Let me bring two things to your mind, - and I am speaking now not of lawless

lynchings and of the mob, but of the acts of Southern white men of the better class. There was a man in south Georgia, a colored man, upon whose land I once stood. He owned ten thousand acres free of debt. He had schools and churches, white tenants and colored tenants. The other day he died without a will and at the request of his inexperienced widow, his friend, the white banker, undertook to settle his estate. In less than a year every cent of this man's property was gone and today his girls are dancing in a cabaret in New York to support themselves and the widowed mother. Or, to take another phase: In Birmingham, l. c. Alabama, the condition of the colored schools has long been a shame. At last in order to get a large bond issue of three million dollars, the best white citizens solemnly promised to spend five hundred thousand dollars upon the Negro schools. They proposed to put up a Negro high school to cost three or four hundred thousand dollars and one large secondary school. They had, however, as principal of the colored high school a Negro tool and lickspittle. He assured them that the colored people didn't need any school as costly as they proposed. He asked for a straggling one story building with a little brick and a great deal of stucco and at a cost of about half what they had proposed to spend. He achieved a partly finished high school. It is precisely such lickspittles and cowards that the propaganda carried on by the Fisk News is developing, and it will never be successful because it holds within itself its own contradiction and denial.

The truth concerning the present racial situation is systematically kept from Fisk students as well as the truth concerning the great liberal movements of the world. Representatives of the International Youth Movement complained that Fisk was one of the few American institutions where they were not allowed contact with the students. Representatives of colored fraternities with their "Go to High School, Go to College" campaign were not allowed to speak at Fisk.

The National Association for the Advancement of Colored People, which has done more than any organization for the freedom the the Negro race and for making the interracial movement possible, has never been represented at Fisk University. And yet Fisk University pretends to be an institution for the presentation of the truth.

THE REASONS

To recapitulate, Fisk University is choking freedom. Self-knowledge is being hindered by refusal of all initiative to the students. Fisk University is not teaching the truth about the race problem.

What is the reason of this state of affairs at Fisk? We colored people, talking among ourselves of the action of white folk toward us continually bring in one general essential cause and that is Total Depravity, - the determination on the part of the white world to do us all possible ill.

Such a reason is, of course, fanciful in nearly all cases, and in this case I do not believe that those in control of Fisk University wish or desire anything but the welfare of the colored race. But the difficulty is that they do not know what is for our good or what we think is for our good. They have not before them facts that are well known to us and points of view and considerations which are to us of tremendous importance. It is in this case, as in so many others, ignorance that leads to evil.

Have you ever seen a king "By the grace of God"? I have. I remember as a young man walking down the Unter den Linden from the Royal Palace past the university and toward the Brandenburg gate. Suddenly there would be a signal and the crowd would turn to the curb and stiffen, standing at attention. Far up the broad avenue came the flash of cream and silver, the waving of plumes and the prancing of horses; and then He flew by, erect, stern and splendid, "Wilhelm, von Gottes Gnade, Koenig von Preussen, Deutscher Kaiser." He has

passed today. He was not a bad man, he was a mistaken one. He did not know. He did not call the real German people to council, and he failed because he did not know. And so whenever a man or a group of men assume to rule over others who are separated from them by class or racial or economic interest they are going to make terrible mistakes if the ruled and the rulers do not sit down and take counsel together. The theory of democracy is not that the people have all wisdom or all ability, but it is that the mass of people form a great reservoir of knowledge and information which the state will ignore at its peril.

So in Fisk University. There are at the service of the Trustees, the President and the Faculty great streams of knowledge and experience; the knowledge and experience of these students here; the knowledge and experience of the whole black world in America which is more and more becoming bound together in organized unity. Fisk University is systematically ignoring these sources of information. It is not consulting the students, it is ordering them about. In only one of the commencement exercises that I have seen did the students have any chance to speak or express themselves, and in that case the President and Faculty were conspicuous by their absence, while the speeches were evidently carefully censored.

In the business which I conduct I pay out over fifty thousand dollars a year; and yet in the fifteen years that I have conducted that business I have never been so threatened with penalties for debt as I have in the last four years in trying to pay my daughter's expenses at Fisk. It was almost impossible, in the first place, to find what the sums were due and when they were to be paid; and when finally I did get notice it was almost invariably too late for me to forward a check before the date on which some penalty for non-payment was due. Several times I have telegraphed funds. And I know of one father, one of the wealthiest graduates of Fisk, whose daughter was publicly denied the right to get books at the book store while across the road at the treasury there lay a balance to her credit. Par-

ents who try to get into sympathetic touch with this institution find no encouragement and those who visit it are usually treated with the scantiest courtesy.

The alumni have no voice in the policy or conduct of the institution. They get no communications except a demand for funds. Almost nothing is done to encourage alumni reunions. No careful record is kept of their activities, and while from time to time one or even two alumni are upon the Board of Trustees they are alumni selected by the President and the Trustees and not by the Alumni Association, and they may or may not represent the opinion of the alumni.

The colored world of Nashville is entirely out of sympathy and out of touch with Fisk University. They attend the exercises held in dwindling numbers. I was present this year at one of the Mozart Society concerts. It was a fine exercise, excellent singing and some of the greatest colored soloists in America, including Florence Cole Talbert. But the society sang to empty benches. I doubt if there were two hundred people in the chapel. And yet I have known the day when a young black boy from west Tennessee, almost untrained, sang that incomparable tenor solo from the Elijah, "Comfort ye, comfort ye, my People," to an audience that covered every inch of the old chapel in Livingston Hall. Today even at the exercises of Commencement Week there is plenty of room for everybody and sometimes wide empty spaces.

The black world of Nashville, and not simply the educated, but the ordinary colored people, know that Fisk University does not want them; that it is straining every effort to attract Southern white people and is segregating and insulting its colored auditors.

~~CLOTHES~~

Suppose that instead of this attitude the authorities of Fisk University took the trouble to consult their alumni and their constituents and their students. Take, for instance, the matter of clothes. There was once a colored

leader who sneered at the pianos in the homes of poor colored people, but it was pointed out to his quick discomfiture that it was a fine thing for the poor to spend on music even that which they might have spent on bread. Did it not show the innate beauty of their souls? And so today Fisk University sneers and raves and passes all sorts of rules against the overdressing of its students, particularly of its women; and there is no doubt but what colored people of the better class (class) waste money in personal adornment. At the same time consider for a moment the reasons: Have you ever ridden on a "Jim Crow" car? I have. I have just come here from riding on many. For the most part they are dirty, ugly, unpleasant. Have you ever been in the colored section of a Southern city? Despite the effort of the colored people to beautify their homes and ~~build beautiful homes~~ the city leaves this section as muddy and nasty and unkempt and unprotected as possible. I just looked upon a new graded school in Atlanta. It was the ugliest building I have ever seen. It went out of its way to be ugly. I thought at first it was a factory of the meaner sort. And so all through the life of colored people and of their children the world makes repeated efforts to surround them with ugliness. Is it a wonder that they flame in their clothing? that they desire to fill their starved souls with overuse of silk and color? They may fail in their object or overdo it, but now and then they do achieve startlingly fine results. I saw upon the campus this afternoon two girls. (Do not worry, they were not from Fisk University and did break your rules.) They were dressed in filmy garments with scarfs of crimson and blue about their necks and the setting sun beyond Jubilee Hall threw its glory over them. They were a startlingly beautiful sight. I do not for a moment dispute that the parents of the girls of Fisk University tend to waste money on their clothes, but I do say that New England old maids dressed like formless frumps in dun and drab garments have no right utterly to suppress and

insult these children of the Sun even if they want to wear silk and that to inculcate good taste in dress is a far more subtle matter than stiff rules and harsh judgments.

FRATERNITIES.

Consider the matter of fraternities. Fisk University is the only one of the larger colored colleges which does not allow fraternities. There are many sound reasons back of this attitude. We know what fraternities have done in the matter of snobbishness and disintegration in many of our large institutions. On the other hand, those institutions have not abolished fraternities and they must have their reasons. Moreover in the case of the colored fraternities their whole inner spirit and the reason for their being differentiates them entirely from white college organizations. They grew up in white northern colleges where colored students were suffering a social ostracism which interfered seriously with their college work. They spread to colored colleges because of the serious efforts which they were making to increase and vivify the college spirit. The "Go to High School, Go to College" campaign carried on annually by the Alpha Phi Alpha fraternity has been one of the greatest incentives in America to push colored youth toward higher education. Not only is that fraternity not allowed in Fisk University, but its representatives could not even come there to speak on the higher education campaign. Another colored fraternity has its "Guide Right" campaign seeking to guide colored graduates into proper employment. The sororities are offering scholarships to colored graduates and prizes. Fisk University has no right autocratically and without consultation with or listening to the advice of students, parents and alumni to ban these powerful and influential organizations and cut their graduates off from the best fellowship for life.

~~THE CLEVELAND SPEECH~~

Again, In northern Ohio there is the city of Cleveland. For fifty years the colored group in Cleveland has fought for minicipal recognition and equality and it has accomplished a splendid work. Our great colored author, Charles W. Chesnutt, is a member of one of the leading literary and social clubs. A colored lawyer, Harry Davis, is a member of the Cleveland City Club and long has served in the Ohio Legislature. We have colored councilmen. We have colored teachers in the public schools who teach without segregation or discrimination. There is not a single "Jim Crow" institution in the city, and this is because with fifty years' fighting we have achieved real democracy in Cleveland. And ~~yet~~ last year, Fisk University went to Cleveland and arranged a dinner and meeting with influential citizens, at which the President of the Board of Trustees and the President of the University spoke. No colored people were invited or expected. No colored people were consulted as to what ought to be siad in that city, ~~and~~ The next day the papers reported that Fisk University believed in segregation for colored people, and thought it was ine itable and permanent! I am aware that explanations were made afterwards; that the speakers affirmed that they were expressing a fact and not a theory; but the best that can be siad of them is that they awkwardly and maladroitly made statements that hurt the cause of the Negro in Cleveland and did the cause of Fisk no good. Suppose that before they staged this meeting they had had a little private talk with their alumni in Cleveland; or with Mr. Chesnutt or with Mr. Davis? They could have accomplished everything that they wanted to accomplish in this great and generous city and at the same time avoided affronting and discrediting a brave and struggling group.

How different it is in other institutions and in those very institutions with which it is the ambition of Fisk University to be recognized as of equal

standing in scholarship! The president and authorities of Harvard University made up their minds to ban the Negro and the Jew; but when protest came from the alumni and the public they did not ignore it, they even encouraged it. They listened to it and they followed it, and they gave up a public policy which was as extraordinary as it was wrong.

41252

JIM CROW

The whole policy of segregation as it is developed at Fisk University is a menace and a disgrace. I am told that this year the Jubilee Club gave a concert downtown. Not only was the colored audience "Jim Crowed" and segregated but the colored teachers were separated from the white teachers and different windows were furnished where colored and white people were to buy their tickets!. When Isaiah Scott, a bishop of the Methodist Episcopal Church, went innocently to the white window he was refused service and insulted. I am told that the President of Fisk University took the fifteen or twenty girls from the Glee Club, girls from some of the best Negro families in the United States, carried them downtown at night to a white men's club, took them down an alley and admitted them through the servants' entrance and had them sing in a basement to Southern white men while these men smoked and laughed and talked. If Erastus Cravath, the first president of this institution, knew that a thing like that had happened at Fisk University he would, if it were in any way possible, rise from the grave and protest against this disgrace and sacrilege.

THE CORRUPT BARGAIN

I have said that these things are taking place at Fisk University mainly through ignorance, mainly because the present workers of this institution do not realize what they are doing or why they should not do these things. But there is, I confess, one other reason, a reason so sinister and so unfortunate that I hesitate to mention it; and it is this: For a long time a powerful section

of the white South has offered to give its consent and countenance to the higher training of Negroes only on condition that the white South control and guide that education. And it is possible that for a million dollars the authorities of Fisk University have been asked either openly or by implication to sell to the white South the control of this institution. It is not the first time that a Corrupt Bargain of this kind has been attempted. Its earlier form at Hampton and Tuskegee included an understanding that these institutions were not to do college work and that they were to furnish servants for white people. # Sincere and long continued attempts were made to carry out this program and they failed. Hampton has become a college and is increasing its college curriculum. The graduates of Tuskegee are not servants for white people and never will be. They are entering college and the professions in larger and larger numbers. Now comes the suspicion of a similar attempt at Fisk. Pressure has been put upon Fisk graduates to go into Southern domestic service, that branch of human activity which is, as the world knows, the chief source of prostitution and the degradation of human independence. If any such bargain as I have outlined has been consciously or unconsciously, openly or secretly entered into by Fisk University, I would rather see every stone of its buildings leveled and every bit of its activity stopped before the Negro race consents.

Back, of course, of suggestions and bargains like this lies the doctrine of the inferiority of the Negro race, and I shall never believe that an institution once taught and guided by men like Cravath and Spence and Chase can ever for a moment take a stand which does not regard the black race as an equal of any other race on earth.

~~THE~~ FISK ALUMNI

This brings me to the second of the two theses which I outlined, namely, that the alumni of Fisk University are and of right ought to be the ultimate source

of authority in the policy and government of this institution. The duty of rescuing Fisk rests upon us as graduates. It is a duty which we may not shirk and before which we cannot longer hesitate. I know the thing that leaps to the minds of all of us. We are aware that every great institution in this land is conducted in the last analysis by its alumni, but we echo in our own case the criticism that is so often flung at us, namely, that we have not supported this institution, that very little of this new million dollar endowment has come from us.

41-2-54

I resent this criticism. The students of Fisk University pay as large a proportion of their expenses as the students of Harvard or any other great Northern institutions. The money which their parents have given to Fisk University and to other public purposes forms a greater proportion of their income and a more costly amount of personal sacrifice than any money that any white group has given or ever will give to this institution. It is recognized the world over today that institutions of learning are the property of the community; that the community ought to support them and that the money given for that support, either given from the public treasury or from private sources, is not a dole to beggars but a debt to society. I resent, therefore, with every ounce of my energy the sneer that the graduates of Fisk University are beggars with no right to rule this institution simply because they are for the most part men who have struggled and toiled and done their duty for low wages and little incomes, amid mob law and prejudice:

"If blood be the price of admiralty, --
If blood be the price of admiralty, --
If blood be the price of admiralty,
Lord God, we have paid in full!"

Our duty is clear before us and our right to perform that duty. The steps that we should take include, first, Publicity. We must let the whole world know just what is happening at Fisk University. Secondly, Organization; instead of

the loose, ineffective Alumni Association, the alumni and friends of this institution must be firmly knit together to rescue Alma Mater. Thirdly, we must demand elective representation on the Board of Trustees, beginning with one or two members and gradually as the years go on increasing until in another generation we shall control the Board.

41-2-5

Finally, while we are taking these steps and as long as present conditions at Fisk University continue, we must actively support by our advice the boycott of this institution which has already begun. The student body at Fisk is beginning to dwindle, and the dwindling has begun with the men because the men have more economic independence than the girls. Livingston Hall houses today about one-half the number of men students which it should house. Other schools are graduating dozens of students who either began their work at Fisk University or would have been glad to go there if they could have expected the treatment of men and women. And unless that treatment is forthcoming we must not encourage colored students to go there.

I know just what this means to us of sacrifice. We love Fisk. We are its children. We believe eternally in its undying spirit; but we cannot sacrifice the ideals of the Negro race and the democracy of the world to our personal selfishness. The Negro race needs colleges. We need them today as never before; but we do not need colleges so much that we can sacrifice the manhood and womanhood of our children to the Thoughtlessness of the North or the Prejudice of the South. Ultimately Fisk will and must survive. The spirit of its great founders will renew itself, and it is that Spirit alone, reborn, which calls us tonight.

"Oh, be swift my soul, to answer Him, be jubilant my feet!
Our God is marching on!"

ENVOY

The result of that speech was an upheaval. The students danced and celebrated in exuberant glee. My daughter even feared that she might be deprived of her degree. The leading colored citizen of Nashville threatened me with personal violence if I returned. The board of trustees was angry. The President of the university was outraged and many of the alumni thought I had done a cruel and unnecessary thing. One of them wrote me, "You may be right but you'll never succeed in ousting the President." Another, a woman, took the floor after my speech and raged for fifteen minutes. I realized that the uplift which one gets in doing what seems to be an unquestioned duty cannot altogether compensate for its cost in friendships, in motives impugned, in lives disturbed. I went away sorry for the little president. I had no personal animus against him but he was angry and stubborn and determined to stick to his program and fight the battle to the bitter end. He would have no elective alumni representation upon the board of trustees. He insisted that unless we followed his program of yielding to the South, Fisk would not get the endowment which he had started to raise. I organized the New York Alumni and began to re-publish the suppressed Fisk Herald. I published my speech and a series of unanswerable documents with signed testimony. Paul Cravath, chairman of the board, stubbornly stood by McKenzie and he encouraged, instead of loosening, tightened the already severe student discipline. A year later, the students, led by George Streator, openly rebelled, and the president capped the climax by sending a half dozen of them publicly to jail. This proved the last straw. The black city rose in protest and the trustees reluctantly sent Fayette McKenzie away.

1931

Between 1924 and 1931 many changes came. Booker Washington died in 1915. The Amenia Conference had cemented understanding between his followers and those of the National Association for the Advancement of Colored People. The Crisis circulated widely and my word was read and listened to. It occurred to George Crawford, trained at Tuskegee, graduated at Yale and trustee of Talladega and Howard, that this would be a fit time to crown the marriage of college and industrial education by having Howard University confer at once upon me and the President of Tuskegee an honorary degree. Mordecai Johnson, president of Howard, gladly assented and so for a moment on the campus of Howard, above the capitol of the United States, I stood upon the mountains and looked down upon my life and the life of a thousand students and reviewed that controversy whose thread had so colored and patterned my educational thought. With the blue and white hood of Howard upon my shoulders I said:

Education and Work

Between the time that I was graduated from college and the day of my first experience at earning a living, there was arising in this land, and more especially within the Negro group, a controversy concerning the type of education which American Negroes needed. You, who are graduating today, have heard but echoes of this controversy and more or less vague theories of its meaning and its outcome. Perhaps it has been explained away to you and interpreted as mere misunderstanding and personal bias. If so, the day of calm review and inquiry is at hand. And I suppose that, of persons living, few can realize better than I just what that controversy meant and what the outcome is. I want then today in the short time allotted me, to state, as plainly as I may, the problem of college and industrial education for American Negroes, as it arose in the past; and then to restate it as it appears to me in its present aspect.

41-2-58

First of all, let me insist that the former controversy was no mere misunderstanding; there was real difference of opinion, rooted in deep sincerity on every side and fought out with a tenacity and depth of feeling due to its great importance and fateful meaning.

It was, in its larger aspects, a problem such as in all ages human beings of all races and nations have faced; but it was new in 1895 as all Time is new; it was concentered and made vivid and present because of the immediate and pressing question of the education of a vast group of the children of former slaves. It was the ever new and age-young problem of Youth, for there had arisen in the South a Joseph which knew not Pharaoh, -- a black man who was not born in slavery. What was he to become? Whither was his face set? How should he be trained and educated? His fathers were slaves, for the most part, ignorant and poverty-stricken; emancipated in the main without land, tools, nor capital, -- the sport of war, the despair of economists, the grave perplexity of Science. Their children had been born in the midst of controversy, of internecine hatred, and in all the economic dislocation that follows war and civil

war. In a peculiar way and under circumstances seldom duplicated, the whole program of popular education became epitomized in the case of these young black folk.

Before men thought or greatly cared, in the midst of the very blood and dust of battle, an educational system for the freedmen had been begun; and with a logic that seemed, at first, quite natural. The night school for adults had become the day school for children. The Negro day school had called for normal teaching and the small New England college had been transplanted and perched on hill and river in Raleigh and Atlanta, Nashville and New Orleans, and a half dozen other towns. This new Negro college was conceived of as the very foundation stone of Negro training. But, meantime, any formal education for slaves or the children of slaves not only awakened widespread and deep-seated doubt, fear and hostility in the South, but it posed, for statesmen and thinkers, the whole question as to what the education of Negroes was really aiming at, and indeed, what was the aim of educating any working class. If it was doubtful as to how far the social and economic classes of any modern state could be essentially transformed and changed by popular education, how much more tremendous was the problem of educating a race whose ability to assimilate modern training was in grave question and whose place in the nation and the world, even granted they could be educated, was a matter of baffling social philosophy? Was the nation making an effort to parallel white civilization in the South with a black civilization? Or was it trying to displace the dominant white master class with new black masters or was it seeking the difficult but surely more reasonable and practical effort of furnishing a trained set of free black laborers who might carry on in place of the violently disrupted slave system? Surely, most men said, this economic and industrial problem of the New South was the first -- the central, the insistent problem of the day.

There can be no doubt of the real dilemma that thus faced the nation, the Northern philanthropist and the black man. The argument for the New England college, which at first seemed to need no apology, grew and developed. The matter of man's earning a

living, said the college, is and must be important, but surely it can never be so important as the man himself. Thus the economic adaptation of the Negro to the South must in education be subordinated to the great necessity of teaching life and culture. The South, and more especially the Negro, needed and must have trained and educated leadership if civilization was to survive. More than most, here was land and people who needed to learn the meaning of life. They needed the preparation of gifted persons for the profession of teaching, and for other professions which would in time grow. The object of education was not to make men carpenters but to make carpenters men.

On the other hand, those practical men who looked at the South after the war said: this is an industrial and business age. We are on the threshold of an economic expansion such as the world never saw before. Whatever human civilization has been or may become, today it is industry. The South because of slavery has lagged behind the world. It must catch up. Its prime necessity after the hate and holocaust of war is a trained reliable laboring class. Assume if you will that Negroes are men with every human capacity, nevertheless, as a flat fact, no rising group of peasants can begin at the top. If poverty and starvation are to be warded off, the children of the freedmen must not be taught to despise the humble work, which the mass of the Negro race must for untold years pursue. The transition period between slavery and freedom is a dangerous and critical one. Fill the heads of these children with Latin and Greek and highfalutin' notions of rights and political power, and hell will be to pay.

On the other hand, in the South, here is land and fertile land, in vast quantities, to be had at nominal prices. Here are employers who must have skilled and faithful labor, and have it now. There is in the near future an industrial development coming which will bring the South abreast with the new economic development of the nation and the world. Freedom must accelerate this development which slavery so long retarded. Here then is no time for a philosophy of economic or class revolution and race hatred. There must be friendship and good will between employer and employee, between black and

white. They have common interests, and the matter of their future relations in politics and society, can well be left for the future generations and different times to solve. "Cast down your buckets where you are," cried Booker T. Washington; "In all things that are purely social we can be as separate as the fingers, yet one hand in all things essential to mutual progress."

What was needed, then, was that the Negro first should be made the intelligent laborer, the trained farmer, the skilled artisan of the South. Once he had accomplished this step in the economic world and the ladder was set for his climbing, his future would be assured, and assured on an economic foundation which would be immovable. All else in his development, if he proved himself capable of development, even to the highest, would inevitably follow. Let us have, therefore, not colleges but schools to teach the technique of industry and to make men learn by doing.

These were the opposing arguments. They were real arguments. They were set forth by earnest men, white and black, philanthropist and teacher, statesman and seer. The controversy waxed bitter. The disputants came to rival organizations, to severe social pressure, to anger and even to blows. Newspapers were aligned for and against; employment and promotion depended often on a Negro's attitude toward industrial education. The Negro race and their friends were split in twain by the intensity of their feeling and men were labelled and ear-marked by their allegiance to one school of thought or to the other.

PRESENT CONDITIONS

Today, all this is past; by the majority of the older of my hearers, it is practically forgotten. By the younger, it appears merely as a vague legend. Thirty-five years, a full generation and more, have elapsed. The increase in Negro education by all measurements has been a little less than marvelous. In 1895, there were not more than 1,000 Negro students of full college grade in the United States. Today, there are over 19,000 in college and nearly 150,000 in high schools. In 1895, 60% of American Negroes, ten years of age or over, were illiterate. Today, perhaps three-fourths can read and write. The increase of Negro students in industrial and

land grant colleges has been equally large. The latter have over 16,000 students and the increasing support of the government of the states; while the great industrial schools, especially Hampton and Tuskegee, are the best endowed institutions for the education of black folk in the world.

WAS THE CONTROVERSY SETTLED?

What then has become of this controversy as to college and industrial education for Negroes? Has it been duly settled, and if it has, how has it been settled? Has it been transmuted into a new program, and if so, what is that program? In other words, what is the present norm of Negro education, represented at once by Howard University, Fisk and Atlanta on one hand, and by Hampton Institute, Tuskegee, and the land grant colleges on the other?

I answer once for all, the problem has not been settled. The questions raised in those days of controversy still stand in all their validity and all their pressing insistence on an answer. They have not been answered. They must be answered, and the men and women of this audience and like audiences throughout the land are the ones from whom the world demands final reply. Answers have been offered; and the present status of the problem has enormously changed, for human problems never stand still. But I must insist that the fundamental problem is still here.

Let us see. The Negro college has done a great work. It has given us leadership and intelligent leadership. Doubtless, without these colleges the American Negro would scarcely have attained his present position. The chief thing that distinguishes the American Negro group from the Negro groups in the West Indies, and in South America, and the mother group in Africa, is the number of men that we have trained in modern education, able to cope with the white world on its own ground and in its own thought, method and language.

On the other hand, there cannot be the slightest doubt but that the Negro college, its teachers, students and graduates, have not yet comprehended the age in which they live: the tremendous organization of industry, commerce, capital, and credit which

today forms a super-organization dominating and ruling the universe, subordinating to its ends government, democracy, religion, education and social philosophy; and for the purpose of forcing into the places of power in this organization American black men either to guide or help reform it, either to increase its efficiency or make it a machine to improve our well-being, rather than the merciless mechanism which enslaves us; for this the Negro college has today neither program nor intelligent comprehension.

On the contrary there is no doubt but that college and university training among us has had largely the exact effect that was predicted; it has turned an increasing number of our people not simply away from manual labor and industry, not simply away from business and economic reform, into a few well-paid professions, but it has turned our attention from any disposition to study or solve our economic problem. A disproportionate number of our college-trained students are crowding into teaching and medicine and beginning to swarm into other professions and to form at the threshold of these better-paid jobs, a white-collar proletariat, depending for their support on an economic foundation which does not yet exist.

Moreover, and perhaps for this very reason, the ideals of colored college-bred men have not in the last thirty years been raised an iota. Rather in the main, they have been lowered. The average Negro undergraduate has swallowed hook, line and sinker, the dead bait of the white undergraduate, who, born in an industrial machine, does not have to think, and does not think. Our college man today is, on the average, a man untouched by real culture. He deliberately surrenders to selfish and even silly ideals, swarming into semi-professional athletics and Greek letter societies, and affecting to despise scholarship and the hard grind of study and research. The greatest meetings of the Negro college year like those of the white college year have become vulgar exhibitions of liquor, extravagance, and fur coats. We have in our colleges a growing mass of stupidity and indifference.

I am not counselling perfection; as desperately human groups, we must expect our share of mediocrity. But as hitherto a thick and thin defender of the college, it seems to me that we are getting into our Negro colleges considerably more than our share of plain fools.

Acquiring as we do in college no guidance to a broad economic comprehension and a sure industrial foundation, and simultaneously a tendency to live beyond our means, and spend for show, we are graduating young men and women with an intense and overwhelming appetite for wealth and no reasonable way of gratifying it, no philosophy for counteracting it.

Trained more and more to enjoy sexual freedom as undergraduates, we refuse graduates to found and support even moderate families, because we cannot afford them; and we are beginning to sneer at group organization and race leadership as mere futile gestures.

Why is this? What is wrong with our colleges? The method of the modern college has been proven by a hundred centuries of human experience: the imparting of knowledge by the old to the young; the instilling of the conclusions of experience, "line upon line, and precept upon precept." But, of course, with this general and theoretical method must go a definite and detailed object suited to the present age, the present group, the present set of problems. It is not then in its method but in its practical objects that the Negro college has failed. It is handing on knowledge and experience but what knowledge and for what end? Are we to stick to the old habit of wasting time on Latin, Greek, Hebrew and eschatology, or are we to remember that, after all, the object of the Negro college is to place in American life a trained black man who can do what the world today wants done; who can help the world know what it ought to want done and thus by doing the world's work well may invent better work for a better world? This brings us right back to the object of the industrial school.

WHAT THE INDUSTRIAL SCHOOL HAS DONE

Negro industrial training in the United States has accomplishments of which it has a right to be proud; but it too has not solved its problem. Its main accomplishment has been an indirect matter of psychology. It has helped bridge the transition period between Negro slavery and freedom. It has taught thousands of white people in the South to accept Negro education, not simply as a necessary evil, but as a possible social good. It has brought state support to a dozen higher institutions of learning,

and to some extent, to a system of public schools. On the other hand, it has tempered and rationalized the inner emancipation of American Negroes. It made the Negro patient when impatience would have killed him. If it has not made working with the hands popular, it has at least removed from it much of the stigma of social degradation. It has made many Negroes seek the friendship of their white fellow citizens, even at the cost of insult and caste. And thus through a wide strip of our country it has brought peace and not a sword.

But this has all been its indirect by-product, rather than its direct teaching. In its direct teaching, the kind of success which it has achieved differs from the success of the college. In the case of the industrial school, the practical object was absolutely right and still is right: that is, the desire of placing in American life a trained black man who could earn a decent living and make that living the foundation stone of his own culture and of the civilization of his group. This was the avowed object of the industrial school. How much has it done toward this? It has established some skilled farmers and among the mass some better farming methods. It has trained and placed some skilled artisans; it has given great impetus to the domestic arts and household economy; it has encouraged Negro business enterprise. And yet we have but to remember these matters to make it patent to all that the results have been pitifully small compared with the need. Our Negro farm population is decreasing; our Negro artisans are not gaining proportionately in industry and Negro business faces today a baffling crisis. Our success in household arts is due not to our effective teaching so much as to the mediaeval minds of our women who have not yet entered the machine age. Most of them seem still to think that washing clothes, scrubbing steps and paring potatoes were among the Ten Commandments.

Why now has the industrial school with all its partial success, failed absolutely in its main object when that object of training Negroes for remunerative occupation is more imperative today than thirty-five years ago?

The reason is clear: if the college has failed because with the right general method it has lacked definite objects appropriate to the age and race; the industrial

school has failed because with a definite object it lacked appropriate method to gain it. In other words, the lack of success of the industrial education of Negroes has come not because of the absence of desperate and devoted effort, but because of changes in the world which the industrial school did not foresee, and which, even if it had foreseen, it could not have prevented, and to which it had not the ability to adapt itself.

It is easy to illustrate this. The industrial school assumed that the technique of industry in 1895, even if not absolutely fixed and permanent, was at least permanent enough for training children into its pursuit and for use as a basis of broader education. Therefore, school work for farming, carpentry, bricklaying, plastering and painting, metal work and blacksmithing, shoemaking, sewing and cooking was introduced and taught. But, meantime, what has happened to these vocations and trades? Machines and new industrial organizations have remade the economic world and ousted these trades either from their old technique or their economic significance. The planing mill does today much of the work of the carpenter and the carpenter is being reduced rapidly to the plane of a mere laborer. The building trades are undergoing all kinds of reconstruction, from the machine-made steel skyscraper, to the cement house cast in molds and the mass-made mail-order bungalow. Painting and masonry still survive, but the machine is after them; while printing and sewing are done by elaborate machines. Metal is being shaped by stamping mills. Nothing of shoemaking is left for the hands save mending, and in most cases, it is cheaper to buy a new shoe than to have an old one cobbled. When it comes to the farm, a world-wide combination of circumstances is driving the farmer to the wall. Expensive machinery demands increasingly larger capital; excessive taxation of growing land values is eliminating the small owner; monopolized and manipulated markets and carriers make profits of the individual farmer small or nil; and the foreign competition of farms worked by serfs at starvation wages and backed by world-wide aggregations of capital -- all this is driving farmers, black and white, from the soil and making the problem of their future existence one of the great problems of the modern world.

The industrial school, therefore, found itself in the peculiar position of teaching a technique of industry in certain lines just at the time when that technique was changing into something different, and when the new technique was a matter which the Negro school could not teach. In fact, with the costly machine, with mass production and organized distribution, the teaching of technique becomes increasingly difficult. Any person of average intelligence can take part in the making of a modern automobile, and he is paid, not for his technical training, but for his endurance and steady application.

There were many lines of factory work, like the spinning and weaving of cotton and wool, which the Negro could have successfully been set to learning, but they involved vast expenditures of capitalwhich no school could control, and organized business at that time decreed that only white folk could work in factories. And that decree still stands. New branches of industry, new technique are continually opening -- like automobile repairing, electrical installments, and engineering -- but these call for changing curricula and adjustments puzzling for a school and a set course of study.

In the attempt to put the Negro into business, so that from the inner seats of power by means of capital and credit he could control industry, we have fallen between two stools, this work being apparently neither the program of the college nor of the industrial school. The college treated it with the most approved academic detachment, while the industrial school fatuously assumed as permanent a business organization which began to change with the Nineteenth Century, and bids fair to disappear with the Twentieth. In 1895 we were preaching individual thrift and saving; the small retail store and the partnership for business and the conduct of industry. Today, we are faced by great aggregations of capital and world-wide credit, which monopolize raw material, carriage and manufacture, distribute their products through cartels, mergers and chain stores, and are in process of eliminating the individual trader, the small manufacturer, and the little job. In this new organization of business the colored man meets two difficulties: first, he is not trained to take part in it; and, secondly, if he gets training, he finds it almost impossible to gain a foothold.

Schools cannot teach as an art and trade that which is a philosophy, a government of men, an organization of civilization. They can impart a mass of knowledge about it, but this is the duty of the college of liberal arts and not the shop work of the trade school.

Thus the industrial school increasingly faces a blank wall and its astonishing answer today to the puzzle is slowly but surely to transform the industrial school into a college. The most revolutionary development in Negro education for a quarter-century is illustrated by the fact that Hampton today is one of the largest of Negro colleges and that her trade teaching seems bound to disappear within a few years. Tuskegee is a high school and college, with an unsolved program of the future of its trade schools. And the land grant colleges, built to foster agriculture and industry, are becoming just like other colleges. And all this, as I said, is not the fault of the industrial school, it comes from this tremendous transformation of business, capital and industry in the Twentieth Century, which few men clearly foresaw and which only a minority of men or of teachers of men today fully comprehend.

41-2-68

THE LABOR MOVEMENT

In one respect, however, the Negro industrial school was seriously at fault. It set its face toward the employer and the capitalist and the man of wealth. It looked upon the worker as one to be adapted to the demands of those who conducted industry. Both in its general program and in its classroom, it neglected almost entirely the modern labor movement. It had little or nothing to teach concerning the rise of trade unions; their present condition, and their future development. It had no conception of any future democracy in industry. That is, the very vehicle which was to train Negroes for modern industry neglected in its teaching the most important part of modern industrial development; namely, the relation of the worker to modern industry and to the modern state.

The reason for this neglect is clear. The Negro industrial school was the gift of capital and wealth. Organized labor was long the enemy of the black man in skilled industry. Organized labor in the United States was and to some extent still is the chief obstacle to keep

black folk from earning a living by its determined policy of excluding them from unions just as long as possible and compelling them to become "scabs" in order to live. The political power of Southern white labor disfranchised Negroes, and helped build a caste system. How was the Negro industrial school easily to recognize, in this Devil of its present degradation, the Angel of its future enlightenment? How natural it was to look to white Capital and not to Labor for the emancipation of the black world -- how natural and yet how insanely futile!

THE UNSOLVED PROBLEM

Here then are the successes and the failures of both Negro college and industrial school and we can clearly see that the problem still stands unsolved: How are we going to place the black American on a sure foundation in the modern state? The modern state is primarily business and industry. Its industrial problems must be settled before its cultural problems can really and successfully be attacked. The world must eat before it can think. The Negro has not found a solid foundation in that state as yet. He is mainly the unskilled laborer; the casual employee; the man hired last and fired first; the man who must subsist upon the lowest wage and consequently share an undue burden of poverty, crime, insanity, and ignorance. The only alleviation of his economic position has come from what little the industrial school could teach during the revolution of technique and from what the college took up as part of its mission in vocational training for professions.

For the college had to become a trainer of men for vocations. This is as true of the white college as of the colored college. They both tended to change their college curricula into pre-vocational preparation for a professional career. But the effort of the Negro college here was half-hearted. There persisted the feeling that the college had finished its work when it placed a man of culture in the world, despite the fact that our graduates who are men of culture are exceptional, and if placed in the world without ability to earn a living, what little culture they have does not long survive.

Thus, at the end of the first third of the Twentieth Century, while both college and industrial school can point to something accomplished, neither has reached its main objective, and they are in process of uniting to become one stream of Negro education with their great problem of object and method unsolved. The industrial school has done but little to impart the higher technique of the industrial process or of the business organization and it has done almost nothing toward putting the Negro working man in touch with the great labor movement of the white world.

On the other hand, the Negro college has not succeeded in establishing that great and guiding ideal of group development and leadership, within a dominating and expanding culture, or in establishing the cultural life as the leading motif of the educated Negro. Its vocational work has been confined to the so-called learned professions, with only a scant beginning of the imparting of the higher technique of industry and science.

41-2-76

THE NEW INDUSTRIAL REVOLUTION

The result which I have outlined is not wholly unexpected. Perhaps we can now say that it was impossible fully to avoid this situation. We have a right to congratulate ourselves that we have come to a place of such stability and such intelligence as now to be ready to grapple with our economic problem. The fact of the matter is, we have up to this time been swept on and into the great maelstrom of the white civilization surrounding us. We have been inevitably made part of that vast modern organization of life where social and political control rests in the hands of those few white folk who control wealth, determine credit and divide income. We are in a system of culture where disparity of income is such that respect for labor as labor cannot endure; where the emphasis and outlook is not what a man does but what he is able to get for doing it; where wealth despises work and the object of wealth is to escape work, and where the ideal is power without toil.

So long as a lawyer can look forward to an income of $100,000 a year while a maid servant is well-paid with $1,000, just so long the lawyer is going to be one hundred times more respectable than the servant and the servant is going to be called

by her first name. So long as the determination of a person's income is not only beyond democratic control and public knowledge, but is a matter of autocratic power and secret manipulation, just so long the application of logic and ethics to wealth, industry and income is going to be a difficult if not insoluable problem.

In the modern world only one country is making a frontal attack upon this problem and that is Russia. Other countries are visualizing it and considering it, making some tentative and half-hearted effort but they have not yet attacked the system as a whole, and for the most part they declare the present system inevitable and eternal and incapable of more than minor and stinted improvement.

In the midst of such a world organization we come looking for economic stability and independence. Of course, our situation is baffling and contradictory. And it is made all the more difficult for us because we are by blood and descent and popular opinion an integral part of that vast majority of mankind which is the Victim and not the Beneficiary of present conditions; which is today working at starvation wages and on a level of brute toil and without voice in its own government or education in its ignorance, for the benefit, the enormous profit, and the dazzling luxury of the white world.

Here lies the problem and it is the problem of the combined Negro college and vocational school. Without the intellectual leadership of college-bred men, we could not hitherto have held our own in modern American civilization, but must have sunk to the place of the helpless proletariat of the West Indies and of South Africa. But, on the other hand, for what has the college saved us? It has saved us for that very economic defeat which the industrial school was established to ward off and which still stands demanding solution. The industrial school acted as bridge and buffer to lead us out of the bitterness of Reconstruction to the toleration of today. But it did not place our feet upon the sound economic foundation which makes our survival in America or in the modern world certain or probable; and the reason that it did not do this was as much the fault of the college as of the trade school. The industrial school

without the college was as helpless yesterday as the college is today helpless without systematic training for modern industry.

Both college and industrial school have made extraordinary and complementary mistakes in their teaching force: the industrial school secured usually as teacher a man of affairs and technical knowledge, without culture or general knowledge. The college took too often as teacher a man of books and brains with no contact with or first-hand knowledge of real every-day life and ordinary human beings, and this was true whether he taught sociology, literature, or science. Both types of teacher failed.

THE NEW EDUCATIONAL PROGRAM

What then is the unescapable task of the united college and vocational school? It is without shadow of doubt a new, broad and widely efficient vocational guidance and education for men and women of ability, selected by the most careful tests and supported by a broad system of free scholarships. Our educational institutions must graduate to the world men fitted to take their place in real life by their knowledge, spirit, and ability to do what the world wants done. This vocational guidance must have for its object the training of men who can think clearly and function normally as physical beings; who have a knowledge of what human life on earth has been, and what it is now; and a knowledge of the constitution of the known universe. All that, and in addition to that, a training which will enable them to take some definite and intelligent part in the production of goods and in the furnishing of human services and in the democratic distribution of income so as to build civilization, encourage initiative, reward effort and support life. Just as the Negro college course with vision, knowledge and ideal must move toward vocational training, so the industrial courses must ascend from mere hand technique to engineering and industrial planning and the application of scientific and technical knowledge to problems of work and wage.

This higher training and vocational guidance must turn out young men and women who are willing not only to do the work of the world today but to provide for the

future world. Here then is the job before us. It is in a sense the same kind of duty that lies before the educated white man; but it has an essential and important difference. If we make a place for ourselves in the industrial and business world today, this will be done because of our ability to establish a self-supporting organization sufficiently independent of the white organization to insure its stability and our economic survival and eventual incorporation into world industry. Ours is the double and dynamic function of tuning in with a machine in action so as neither to wreck the machine nor be crushed or maimed by it. Many think this is impossible. But if it is impossible, our future economic survival is impossible.

Let there be no misunderstanding about this, no easy going optimism. We are not going to share modern civilization just by deserving recognition. We are going to force ourselves in by organized far-seeing effort -- by out-thinking and out-flanking the owners of the world today who are too drunk with their own arrogance and power successfully to oppose us, if we think and learn and do.

It is not the province of this paper to tell in detail just how this problem will be settled. Indeed, I could not tell you if I would. I merely stress the problem and emphasize the possibility of the solution. A generation ago those who doubted our survival said that no alien and separate nation could hope to survive within another nation; that we must be absorbed or perish. Times have changed. Today it is rapidly becoming true that only within some great and all inclusive empire or league, can separate nations and groups find freedom and protection and economic scope for development. The small separate nation is becoming increasingly impossible and the League of Nations as well as Briand's proposed League of Europe shout this from the housetops. And just as loudly, the inevitable disintegration of the British Empire shows the impossibility of world embracing centralized autocracy. This means that the possibility of our development and survival is clear, but clear only as brains and devotion and skilled knowledge point the way.

TEACHERS

We need then, first, training as human beings in general knowledge and experience; then technical training to guide and do a specific part of the world's work. The broader training should be the heritage and due of all but today it is curtailed by poverty. The technical training of man must be directed by vocational guidance which finds fitness and ability. Then actual and detailed technical training will be done by a combination of school, laboratory and apprenticeship, according to the nature of the work and the changing technique.

The teachers of such a stream of students must be of a high order. College teachers cannot follow the mediaeval tradition of detached withdrawal from the world. The professor of mathematics in a college has to be more than a counting machine, or proctor of examinations; he must be a living man, acquainted with real human beings, and alive to the relation of his branch of knowledge to the technical problem of living and earning a living. The teacher in a Negro college has got to be something far more than a master of a branch of human knowledge. He has got to be able to impart his knowledge to human beings whose place in the world is today precarious and critical; and the possibilities and advancement of that human being in the world where he is to live and earn a living, is of just as much importance in the teaching process as the content of the knowledge taught.

The man who teaches blacksmithing must be more than a blacksmith. He must be a man of education and culture, acquainted with the whole present technique and business organization of the modern world, and acquainted too with human beings and their possibilities. Such a man is difficult to procure. Because industrial schools did not have in the past such teachers for their classes and could not get them, their whole program suffered unmerited criticism. The teachers, then, cannot be pedants or dilettantes, they cannot be mere technicians and higher artisans; they have got to be social statesmen and statesmen of high order. The student body of such schools has got to be selected for something more than numbers. We must eliminate those who are here because their parents wish to be rid of them, or for the social prestige or

for passing the time or for getting as quickly as possible into a position to make money to throw away; and we must concentrate upon young men and women of ability and vision and will.

IDEAL

Today there is but one rivalry between culture and vocation, college training and trade and professional training, and that is the rivalry of Time. Some day every human being will have college training. Today some must stop with the grades, and some with high school, and only a few reach college. It is of the utmost importance, then, and the essential condition of our survival and advance that those chosen for college be our best and not simply our richest or most idle.

But even this growth must be led; it must be guided by Ideals. We have lost something, brothers, wandering in strange lands. We have lost our ideals. We have come to a generation which seeks advance without ideals -- discovery without stars. It cannot be done. Certain great landmarks and guiding facts must stand eternally before us; and at the risk of moralizing, I must end by emphasizing this matter of the ideals of Negro students and graduates.

The ideal of Poverty. This is the direct antithesis of the present American ideal of Wealth. We cannot all be wealthy. We should not all be wealthy. In an ideal industrial organization no person should have an income which he does not personally need; nor wield a power solely for his own whim. If civilization is to turn out millionaires, it will also turn out beggars and prostitutes, either at home or among the lesser breeds without the law. A simple healthy life on limited income is the only reasonable ideal of civilized folk.

The ideal of Work -- not idleness, not dawdling, but hard continuous effort at something worth doing, by a man supremely interested in doing it, who knows how it ought to be done and is willing to take infinite pains doing it.

The ideal of Knowledge -- not guess work, not mere careless theory; not inherited religious dogma clung to because of fear and inertia and in spite of logic, but critically tested and laboriously gathered fact martialed under scientific law and feeding

rather than choking the glorious world of fancy and imagination, of poetry and art, of beauty and deep culture.

Finally and especially, the ideal of Sacrifice. I almost hesitate to mention this -- so much sentimental twaddle has been written of it. When I say sacrifice, I mean sacrifice. I mean a real and definite surrender of personal ease and satisfaction. I embellish it with no theological fairy tales of a rewarding God or a milk and honey heaven. I am not trying to scare you into the duty of sacrifice by the fires of a mythical Hell. I am repeating the stark fact of survival of life and culture on this earth:

"Entbehren sollst du -- sollst enthehren."

Thou shalt forego, shalt do without.

41-2-76

The insistent problem of human happiness is still with us. We American Negroes are not a happy people. We feel perhaps as never before the sting and bitterness of our struggle. Our little victories won here and there serve but to reveal the shame of our continuing semi-slavery and social caste. We are torn asunder within our own group because of the rasping pressufe of the struggle without. We are as a race not simply dissatisfied, we are embodied Dissatisfaction.

To increase abiding satisfaction for the mass of our people, and for all people, someone must sacrifice something of his own happiness. This is a duty only to those who recognize it as a duty. The larger the number ready to sacrifice, the smaller the total sacrifice necessary. No man of education and culture and training, who proposes to face his problem and solve it, can hope for entire happiness. It is silly to tell intelligent human beings: Be good and you will be happy. The truth is today, be good, be decent, be honorable and self-sacrificing and you will not always be happy. You will often be desperately unhappy. You may even be crucified, dead and buried, and the third day you will be just as dead as the first. But with the death of your happiness may easily come increased happiness and satisfaction and fulfillment for other people -- strangers, unborn babes, uncreated worlds. If this is not sufficient incentive, never try it -- remain hogs.

The present census will show that the American Negro of the educated class and even of the middle industrial class is reproducing himself at an even slower rate than the corresponding classes of whites. To raise a small family today is a sacrifice. It is not romance and adventure. It is giving up something of life and pleasure for a future generation.

If, therefore, real sacrifice for others in your life work appeals to you, here it is. Here is the chance to build an industrial organization on a basis of logic and ethics, such as is almost wholly lacking in the modern world. It is a tremendous task, and it is the task equally and at once of Howard and Tuskegee, of Hampton and Fisk, of the college and of the industrial school. Our real schools must become centers of this vast Crusade. With the faculty and the student body girding themselves for this new and greater education, the major part of the responsibility will still fall upon those who have already done their school work; and that means upon the alumni who, like you, have become graduates of an institution of learning. Unless the vision comes to you and comes quickly, of the educational and economic problem before the American Negro, that problem will not be solved. You not only enter, therefore, today the worshipful company of that vast body of men upon whom a great center of learning, with ancient ceremony and colorful trappings, has put the accolade of intellectual knighthood; but men who have become the unselfish thinkers and planners of a group of people in whose hands lies the economic and social destiny of the darker peoples of the world, and by that token of the world itself.

Finally, no one may fail to stress before any audience, or on any occasion and on any errand bent, the overshadowing and all-inclusive ideal of Beauty -- "fair face of Beauty, all too fair to see" -- fitness, rhythm, perfection of adaptation of ends to means. It is hard to mention this intelligently without maudlin sentiment and clouded words. May I speak then in parable?

Last night I saw the Zepplin sailing in silver across the new moon. Brilliant, enormous, lovely, it symbolized the civilization over which it hung. It rode serene

above miles of Death; like a needle it threaded together clouds and seas, stars and continents. Within its womb were caged eternal and palpitating forces of the universe, and yet without quiver it faced the utter ends of space. Across the city, mute, dominant, magnificent, imponderable -- it flew.

And what it did, men and women of Howard, you may do -- you must do or die. The Zepplin is neither miracle nor stroke of genius. It is unremittent toil and experiment and thought and infinite adaptation in the face of every discouragement and failure, in the face of death itself.

I thought as I saw it flying there, of an angel flying low -- an angel of steel and silk ~~and of~~ with grim and awful human aim. I remembered the word of our own poet, great, but little known:

I thought I say an angel flying low.
I thought I saw the flicker of a wing
Above the mulberry trees; but not again.
Bethesda sleeps. . .

There was a day, I remember now,
I beat my breast and cried, "Wash me God,
Wash me with a wave of wind upon
The barley; O quiet One, draw near, draw near!
Walk upon the hills with lovely feet
And in the waterfall stand and speak.

ENVOY

The reception of this speech was kindly. I think it helped. But the speech lacked something. It was strong in exposition and criticism, but weak and vague in remedy. I was at this time in my social thought entering a wider and broader ocean, and I did not yet see clearly whither I was sailing. For that illumination I have yet to wait. Perhaps my audience sensed this.

1933

At Fisk University a new president had come to power. The General Education Board had promised sorely needed money. A new regime and a new spirit were being built up. I myself had turned back to the academic world and taken up again the teaching of sociology at the rebuilt Atlanta University. It seemed, therefore, on the occasion of my forty-fifth anniversary of graduation to utter a word of guidance. I think the authorities of Fisk would have preferred my silence. I had been in the past rather prodigal with advice, and the results had been almost disastrous. President Jones exhibited a little nervousness as he extended the invitation; but I explained to him frankly that I had no desire to prolong my hectic career of Fisk king-maker. I was satisfied , in the main, with his administration, but I wanted to guide in general the Negro college. I sensed a natural difficulty. When the Southern Negro college changed from a missionary school to a secular college, there was a tendency continually to say: this college is not a Negro college; it is a college; we are not teaching Negro science or Negro art; we are teaching Art and Science. To this I wanted to oppose a word of warning. I wanted to say in all kindliness and cooperation: you are and should and must remain a Negro college; but that involves no low ideals.

41-2-80

THE FIELD AND FUNCTION OF THE NEGRO COLLEGE

AFRICA

Once upon a time some four thousand miles east of this place, I saw the functioning of a perfect system of education. It was in West Africa, beside a broad river; and beneath the palms, bronze girls were dancing before the President of Liberia and the native chiefs, to celebrate the end of the Bush Retreat and their arrival at marriageable age.

There under the Yorubas and other Sudanese and Bantu tribes, the education of the child began almost before it could walk. It went about with mother and father in their daily tasks; it learned the art of sowing and reaping and hunting; it absorbed the wisdom and folk lore of the tribe; it knew the lay of land and river. Then at the age of puberty it went into the Bush and there for a season the boys were taught the secrets of sex and the girls in another school learned of motherhood and marriage. They came out of the Bush with a ceremony of graduation, and immediately were given and taken in marriage.

Even after that, their education went on. They sat in council with their elders and learned the history and science and art of the tribe, and practiced all in their daily life. Thus education was completely integrated with life. There could be no uneducated people. There could be no education that was not at once for use in earning a living and for use in living a life. Out of this education and out of the life it typified came, as perfect expressions, song and dance and saga, ethics and religion.

Nothing more perfect has been invented than this system of training youth among primitive African tribes. And one sees it in the beautiful courtesy of black children; in the modesty and frankness of womanhood, and in the dignity and courage of manhood; and too, in African music and art with its world-wide influence.

CHANGING CULTURE

If a group has a stable culture which moves, if we could so conceive it, on one general level, here would be the ideal of our school and university. But, of course, this can never be achieved by human beings on any wide stage.

First and most disconcerting, men progress, which means that they change their home, their work, their division of wealth, their philosophy. And how shall men teach children that which they themselves do not know or transmit a philosophy or religion that is already partly disbelieved and partly untrue? This is a primal and baffling problem of education and we have never wholly solved it. Or in other words, education of youth in a changing world is a puzzling problem with every temptation for lying and propaganda. But this is but the beginning of trouble. Within the group and nation significant differentiations and dislocations appear, so that education of youth becomes a preparation not for one common national life but for the life of a particular class or group; and yet the tendency is to regard as real national education only the training for this group which assumes to represent the nation because of its power and privilege, and despite the fact that it is usually a small numerical minority in the nation. Manifestly in such case if a member of one of the suppressed groups receives the national education in such a land, he must become a member of the privileged aristocracy or be educated for a life which he cannot follow and be compelled to live a life which he does not like or which he deeply despises.

This is the problem of education with which the world is most familiar, and it tends to two ends: it makes the mass of men dissatisfied with life and it makes the university a system of culture for the cultured.

THE UNIVERSITY CULTURE

With this kind of university, we are most familiar. It reached in our day perhaps its greatest development in England in the Victorian era. Eton and Harrow, Oxford and Cambridge, were for the education of gentlemen -- those people who inherited wealth and who by contact and early training acquired a body of manners and a knowledge of

life and even an accent of English which placed them among the well-bred; these were taken up and further trained for the particular sort of life which they were to live; a life which pre-supposed a large income, travel, cultivated society; and activity in politics, art, and imperial industry.

This type of university training has deeply impressed the world. It is foundation for a tenacious legend preserved in fiction, poetry, and essay. There are still many people who quite instinctively turn to this sort of thing when they speak of a university. And out of this ideal arose one even more exotic and apart. Instead of the university growing down and seeking to comprehend in its curriculum the life and experience, the thought and expression of lower classes; it almost invariably tended to grow up and narrow itself to a sublimated élite of mankind.

It conceived of culture, exquisite and fragile, as a thing in itself, disembodied from flesh and action; and this culture as existing for its own sake. It was a sort of earthly heaven into which the elect of wealth and privilege and courtly address, with a few chance neophytes from the common run of men, entered and lived in a region above and apart. One gets from this that ideal of cloistered ease for Science and Beauty, partaken of by those who sit far from the noise and fury, clamor and dust of the world, as the world's aristocrats, artists and scholars.

And yet, the argument against such an ideal of a university is more an argument of fact than logic. For just as soon as such a system of training is established or as men seek to establish it, it dies. It does like a plant without root, withering into fantastic forms, that bring ridicule or hate. Or it becomes so completely disassociated with the main currents of real life that men forget it and the world passes on as though it was not, and had not been. Thus the university cut off from its natural roots and from the mass of men becomes a university of the air and does not establish and does not hold the ideal of universal culture which it sought, in its earlier days, to make its great guiding end.

THE ROOTS OF CULTURE

How is it now that failure to reach this often, if not always, kills the university? The reasons to me seem clear. Human culture in its broadest and finest sense can never be wholly the product of the few. There is no natural aristocracy of man, either within a nation or among the races of the world, which unless fed copiously from without can build up and maintain and diversify a broad human culture. A system, therefore, of national education which tries to confine its benefits to preparing the few for the life of the few, dies of starvation. And this every aristocracy which the world has ever seen can prove a thousand times. There are two ways in which this can be remedied: the aristocracy may be recruited from the masses, still leaving the aim of education as the preparation of men for the life of this privileged class. This has been the desperate effort of England and in this way English aristocracy has kept its privilege and its wealth more successfully than any modern or ancient land. But even here, the method fails because the life of the English aristocrat is after all not the broadest and fullest life.

It is only, therefore, as the university lives up to its name and reaches down to the mass of universal men and makes the life of normal men the object of its training, it is only in this way that the marvelous talent and diversity and emotion of all mankind pours up through this method of human training and establishes a national culture and a national art. Herein lies the eternal logic of democracy.

Thus in the progress of human culture you have not simply a development that produces different classes of men, because classes may harmonize more or less and above the peasant, the artisan and the merchant, may exist a leisured aristocracy and on this leisured class a class culture may be built, which may flourish long and wide. But the difficulty goes further than the narrowness and ultimate sterility of this plan. Dislocations come within these classes. Their relations to each other may change and break and the foundations upon which the cultured class has been built, may crumble. In this case your system of human training becomes not only a system for

the supposed benefit of the privileged few, but cannot, indeed, carry out its function even for them. Its system of learning does not fit the mass of men nor the relations of its constituents to that mass.

One can see examples of this the world over. In Kenya, which used to be German East Africa, there are millions of black natives and a few thousand white Englishmen who have seized and monopolized the best land, leaving the natives scarcely enough poor land for subsistence. By physical slavery, economic compulsion or legal sanction, the natives work the land of the whites.

What kind of education will suit Kenya? The minority of landed aristocracy will be taught by tutors in Africa and then go the the great English schools and universities. The middle class of immigrant Indian merchants will learn to read and write and count at home or in elementary schools. The great mass of the black millions will be taught something of the art of agriculture, something of the work of artisans, perhaps some ability to read and write, although whether this should be in English or merely in the native tongue is a question. But on this foundation there can grow in Kenya no national university of education, because there are no national ideals. No culture, either African or European, can be built on any such economic foundation.

Thus the university, if it is to be firm, must hark back to the original ideal of the Bush school. It must train the children of a nation for life and for making a living. And if it does that, and insofar as it does it, it becomes the perfect expression of the life and the center of the intellectual and cultural expression of its age.

FISK, 1885

I have seen in my life three expressions of such an ideal; all of them imperfect, all of them partial, and yet each tending toward a broad and singularly beautiful expression of universal education. My first sight of it was here at Fisk University in the fall of 1885 when I arrived as a boy of seventeen. The buildings were few, the cost of tuition, board, room and clothes was less than $200 a year; and the college numbered less than twenty-five. And yet the scheme of education as it existed

in our minds, in the class room, in the teaching of professors, in the attitude of students, was a thing of breadth and enthusiasm with an unusual unity of aim. We were a small group of young men and women who were going to transform the world by giving proof of our own ability, by teaching our less fortunate fellows so that they could follow the same path, by proclaiming to the world our belief in American democracy, and the place which Negroes would surely take in it. In none of these propositions did there exist in our minds any hesitation or doubt. There was no question as to employment and perfectly proper employment for graduates, for the ends which we had in view. There was no question of our remaining in school for no good or earnest student ever left.

41-2-86

Above all, to our unblinking gaze, the gates of the World would open -- were opening. We never for a moment contemplated the possibility that seven millions of Americans who proved their physical and mental worth could be excluded from the national democracy of a common American culture. We came already bringing gifts. The song we sang was fresh from the lips that threw it round the world. We saw and heard the voices that charmed an emperor and a queen. We believed in the supreme power of the ballot in the hands of the masses to transform the world. Already the North was breaking the Color Line and for the South we were willing to wait.

HARVARD, 1888

I saw the same thing a few years later in Harvard University at the end of the Nineteenth Century. Harvard had broadened its earlier ideals. It was no longer simply a place where rich and learned New England gave the accolade to the social elite. It had broken its shell and stretched out to the West and to the South, to yellow students and to black. I had for the mere asking been granted a fellowship of $300 -- a sum so vast to my experience that I was surprised when it did not pay my first year's expenses. Men sought to make Harvard an expression of the United States, and to do this by means of leaders unshackled in thought and custom who were beating back bars of ignorance and particularism and prejudice. There were William James and Josiah Royce; Nathaniel

Shaler and Charles Eliot Norton; George Santayana; Albert Bushnell Hart, and President Eliot himself. There were at least a dozen men -- rebels against convention, unorthodox in religion, poor in money, who for a moment held in their hands the culture of the United States, typified it, expressed it, and pushed it a vast step forward. Harvard was not in 1888 a perfect expression of the American soul, or the place where the average American would have found adequate training for his life work. But perhaps it came nearer that high eminence than any other American institution had before or has since.

BERLIN, 1892

Again a few years later, I saw the University of Berlin. It represented in 1892 a definite and unified ideal. It did not comprehend at once the culture of all Germany, but I do not believe that ever in modern days and certainly not at Fisk or Harvard did a great university come so near expressing a national ideal. It was as though I had been stepping up from a little group college with a national vision to a provincial university with more than national outlook to a national institution which came near gathering to itself the thought and culture of forty million human beings. Every great professor of Germany, with few exceptions, had the life ambition to be called to a Chair in the Friedrich Wilhelm's Universitaet zu Berlin. I sat beneath the voice of a man who perhaps more than any single individual embodied the German ideal and welded German youth into that great aggressive fist which literally put Deutschland ueber Alles! I remember well Heinrich von Treitschke. With swift flying words that hid a painfully stuttering tongue, he hammered into the young men who sat motionless and breathless beneath his voice, the doctrine of the inborn superiority of the German race. And out and around that university for a thousand miles, millions of people shared in its ideal teaching, and did this in spite of caste of birth and poverty, jostling wealth because they believe in an ultimate unity which Bismarckian state socialism promised. They sang their national songs and joined in national festivals with enthusiasm that brought tears to the onlooker. And it made you realize

the ideal of a single united nation and what it could express in matchless poetry, daring science and undying music.

Yet in each of these cases, the ultimate ideal of a national, much less a universal university was a vision never wholly attained, and in the very nature of the case it could not be. Fisk had to be a Negro university because it was teaching Negroes and they were a caste with their own history and problems. Harvard was still a New England provincial institution and Berlin was sharply and determinedly German. Their common characteristic was that starting where they did and must, they aimed and moved toward universal culture.

41-2-8

NEED OF NEGRO UNIVERSITIES

Now with these things in mind, let us turn back to America and to the American Negro. It has been said many times that a Negro university is nothing more and nothing less than a university. Quite recently one of the great leaders of education in the United States, Abraham Flexner, said something of that sort concerning Howard University. As President of the Board of Trustees, he said he was seeking to build not a Negro University but a University. And by those words he brought again before our eyes the ideal of a great institution of learning which becomes a center of universal culture. With all good will toward them that speak such words it is the object of this paper to insist that there can be no college for Negroes which is not a Negro college and that while an American Negro university, just like a German or a Swiss university, may rightly aspire to a universal culture unhampered by limitations of race and culture, yet it must start on the earth where we sit and not in the skies whither we aspire. May I develop this thought?

In the first place, we have got to remember that here in America, in the year 1933, we have a situation which cannot be ignored. There was a time when it seemed as though we might best attack the Negro problem by ignoring its most unpleasant features. It was not and is not yet in good taste to speak generally about certain facts which characterize our situation in America. We are politically ham-strung. We have the

greatest difficulty in getting suitable and remunerative work. Our education is more and more not only being confined to our own schools but to a segregated public school system far below the average of the nation with one-third of our children continuously out of school. And above all, and this we like least to mention, we suffer a social ostracism which is so deadening and discouraging that we are compelled either to lie about it or to turn our faces toward the red flag of revolution. It consists of the kind of studied and repeated and emphasized public insult of the sort which during all the long history of the world has led men to kill or be killed. And in the full face of any effort which any black man may make to escape this ostracism for himself, stands this flaming sword of racial doctrine which will distract his effort and energy if it does not lead him to spiritual suicide.

We boast and have right to boast of our accomplishment between the days that I studied here and this 45th Anniversary of my graduation. It is a calm appraisal of fact to say that the history of modern civilization cannot surpass if it can parallel the advance of American Negroes in every essential line of culture in these years. And yet when we have said this we must have the common courage honestly to admit that every step we have made forward has been greeted by a step backward on the part of the American public in caste intoleration, mob law, and racial hatred.

I need but remind you that when I graduated from Fisk there was no "Jim Crow" car in Tennessee and I saw Hunter of '89 once sweep a brakeman aside at the Union Station and escort a crowd of Fisk students into the first-class seats for which they had paid. There was no legal disfranchisement and a black Fiskite sat in the Legislature; and while the Chancellor of Vanderbilt University had annually to be reintroduced to the President of Fisk, yet no white Southern group presumed to dictate the internal social life of this institution.

Manifestly with all that can be said, pro and con, and in extenuation, and by way of excuse and hope, this is the situation and we know it. There is no human way by which these facts can be ignored. We cannot do our daily work, sing a song, or write a book or carry on a university and act as though these things were not.

If this is true, then no matter how much we may dislike the statement, the American Negro problem is and must be the center of the Negro American university. It has got to be. You are teaching Negroes. There is no use pretending that you are teaching Chinese or that you are teaching white Americans or that you are teaching citizens of the world. You are teaching American Negroes in 1933, and they are the subjects of a caste system in the Republic of the United States of America and their life problem is primarily this problem of caste.

Upon these foundations, therefore, your university must start and build. Nor is the thing so entirely unusual or unheard of as it sounds. A university in Spain is not simply a university. It is a Spanish university. It is a university located in Spain. It uses the Spanish language. It starts with Spanish history and makes conditions in Spain the starting point of its teaching. Its education is for Spaniards, not for them as they may be or ought to be, but as they are with their present problems and disadvantages and opportunities.

In other words, the Spanish university is founded and grounded in Spain, just as surely as a French university is French. There are some people who have difficulty in apprehending this very clear truth. They assume, for instance, that the French university is in a singular sense universal, and is based on a comprehension and inclusion of all mankind and of their problems. But it is not, and the assumption that it is arises simply because so much of French culture has been built into universal civilization. A French university is founded in France; it uses the French language and assumes a knowledge of French history. The present problems of the French people are its major problems and it becomes universal only so far as other peoples of the world comprehend and are at one with France in its mighty and beautiful history.

In the same way, a Negro university in the United States of America begins with Negroes. It uses that variety of the English idiom which they understand; and above all, it is founded, or it should be founded on a knowledge of the history of their people in Africa and in the United States, and their present condition. Without

white-washing or translating wish into facts, it begins with that; and then it asks how shall these young men and women be trained to earn a living and live a life under the circumstances in which they find themselves or with such changing of those circumstances as time and work and determination will permit.

Is this statement of the field of a Negro university a denial of aspiration or a change from older ideals? I do not think it is, although I admit in my own mind some change of thought and modification of method.

The system of learning which bases itself upon the actual condition of certain classes and groups of human beings is tempted to suppress a minor premise of fatal menace. It proposes that the knowledge given and the methods pursued in such institutions of learning shall be for the definite object of perpetuating present conditions or of leaving their amelioration in the hands of and at the initiative of other forces and other folk. This was the great criticism that those of us who fought for higher education of Negroes thirty years ago, brought against the industrial school.

The industrial school founded itself and rightly upon the actual situation of American Negroes and said: "What can be done to change this situation?" And its answer was: A training in technique and method such as would incorporate the disadvantaged group into the industrial organization of the country, and in that organization the leaders of the Negro had perfect faith. Since that day the industrial machine has cracked and groaned. Its technique has changed faster than any school could teach; the relations of capital and labor have increased in complication and it has become so clear that Negro poverty is not primarily caused by ignorance of technical knowledge that the industrial school has almost surrendered its program.

In opposition to that, the proponents of college training in those earlier years said: "What black men need is the broader and more universal training so that they can apply the general principles of knowledge to the particular circumstances of their condition."

Here again was indubitable truth but incomplete truth. The technical problem lay in the method of teaching this broader and more universal truth and here just as in the industrial program, we must start where we are and not where we wish to be.

PROGRAM OF A NEGRO UNIVERSITY

As I said a few years ago at Howard University both these positions had thus something of truth and right. Because of the peculiar economic situation in our country the program of the industrial school came to grief first and has practically been given up. Starting even though we may with the actual condition of the Negro peasant and artisan, we cannot ameliorate his condition simply by learning a trade which is the transient technique of a passing era. More vision and knowledge is needed than that. But on the other hand, while the Negro college of a generation ago set down a defensible and true program of applying knowledge to facts, it unfortunately could not completely carry it out, and it did not carry it out because the one thing that the industrial philosophy gave to education, the Negro college did not take and that was <u>that the university education of black men in the United States must be grounded in the condition and work of those black men!</u>

On the other hand, it would be of course idiotic to say, as the former industrial philosophy almost said, that so far as most black men are concerned, education must stop with this. No, starting with present condition and using the facts and the knowledge of the present situation of American Negroes, the Negro university expands toward the possession and the conquest of all knowledge. It seeks from a beginning of the history of the Negro in America and in Africa to interpret all history; from a beginning of social development among Negro slaves and freedmen in America and Negro tribes and kingdoms in Africa, to interpret and understand the social development of all mankind in all ages. It seeks to reach modern science of matter and life from the surroundings and habits and aptitudes of American Negroes and thus lead up to understanding of life and matter in the universe.

And this is a different program than a similar function would be in a white university or in a Russian university or in an English university, because it starts from a different point. It is a matter of beginnings and integrations of one group which sweep instinctive knowledge and inheritance and current reactions into a universal world of science, sociology, and art. In no other way can the American Negro college function. It cannot begin with history and lead to Negro history. It cannot start with sociology and end with Negro sociology.

Why was it that the Renaissance of literature which began among Negroes ten years ago has never taken real and lasting root? It was because it was a transplanted and exotic thing. It was a literature written for the benefit of white people and at the behest of white readers, and starting out primarily from the white point of view. It never had a real Negro constituency and it did not grow out of the inmost heart and frank experience of Negroes; on such an artificial basis no real literature can grow.

On the other hand, if starting in a great Negro university you have knowledge, beginning with the particular, and going out to universal comprehension and unhampered expression, you are going to begin to realize for the American Negro the full life which is denied him now. And then after that comes a realization of the older object of our college -- to bring this universal culture down and apply it to the individual life and individual conditions of living Negroes.

The university must become not simply a center of knowledge but a center of applied knowledge and guide of action. And this is all the more necessary now since we easily see that planned action especially in economic life is going to be the watchword of civilization.

If the college does not thus root itself in the group life and afterward apply its knowledge and culture to actual living, other social organs must replace the college in this function. A strong, intelligent family life may adjust the student to higher culture; and, too, a social clan may receive the graduate and induct him into life. This has happened and is happening among a minority of privileged people. But it costs society a fatal price. It tends to hinder progress and hamper change -- it makes education propaganda for things as they are. It leaves the mass of those without social standing -- misfits and rebels who despite their education are uneducated in its meaning and application. The only college which stands for the progress of all -- mass as well as aristocracy, functions in root and blossom as well as in the overshadowing and heaven-filling tree. No system of learning -- no university can be universal before it is German, French, Negro. Grounded in inexorable fact and

and condition, in Poland or Italy, it may seek the universal, and haply it may find it -- and finding it bring it down to earth and to us.

PROGRESS

We have imbibed from the surrounding white world a childish idea of progress. Progress means bigger and better results always and forever. But there is no such rule of life. In six thousand years of human culture, the losses and retrogressions have been enormous. We have no assurance that twentieth century civilization will survive. We do not know that American Negroes will survive. There are sinister signs about us, antecedent to and unconnected with the great depression. The organized might of industry north and south is relegating the Negro to the edge of survival and using him as a labor reservoir on starvation wage. No secure professional class, no science, literature nor art can live on such a sub-soil. It is an insistent deep-throated cry for rescue, guidance, and organized advance that greets the black leader today and the college that trains him has got to let him know at least as much about the great black miners strike in Alabama as about the Age of Pericles. By singular accident -- almost by compelling fate -- I drove by as I came here yesterday -- the region where I taught a country school over forty years ago. There is no progress there. There is only space, disillusion, and death beside the same eternal hills. There where first I heard the Sorrow Songs are the graves of men and women and children who had the making of a fine intelligent upstanding yeomanry. There remains but the half-starved farmer, the casual laborer, the unpaid servant. Why in a land rich with wealth, muscle, and colleges?

To the New Englander of wealth and family Harvard and Yale are parts and only parts of a broad training which the New England home begins and a State Street or Wall Street business ends. How fine and yet how fatal! There lies root and reason for the World War and the Great Depression. To the American Negro, culture must adjust itself to a different family history and apply itself to a new system of social caste and in this adjustment comes new opportunity of making education and progress possible and not antagonistic.

We are on the threshold of a new era. Let us not deceive ourselves with outworn ideals of wealth and servants and luxuries, reared on a foundation of ignorance, starvation and want. Instinctively, we have absorbed these ideals from our twisted white American environment. This new economic planning is not for us unless we do it. Unless the American Negro today, led by trained university men of broad vision, sits down to work out by economics and mathematics, by physics and chemistry, by history and sociology, exactly how and where he is to earn a living and how he is to establish a reasonable life in the United States or elsewhere, unless this is done the university has missed its field and function and the American Negro is doomed to be a suppressed and inferior caste in the United States for incalculable time.

Here, then, is a job for the American Negro university. It cannot be successfully ignored or dodged without the growing menace of disaster. I lay the problem before you as one which you must not ignore.

TEACHERS AND STUDENTS

To carry out this plan, two things and only two things are necessary -- teachers and students. Buildings and endowments may help, but they are not indispensable. It is necessary first to have teachers who comprehend this program and know how to make it live among their students. This is calling for a good deal, because it asks that teachers teach that which they have learned in no American school and which they never will learn until we have a Negro university of the sort that I am visioning. No teacher, black or white, who comes to a university like Fisk, filled simply with general ideas of human culture or general knowledge of disembodied science, is going to make a university of this school. Because a university is made of human beings, learning of the things they do not know from things they do know in their own lives.

And secondly, we must have students. They must be chosen for ability to learn. There is always the temptation to assume that the children of privileged classes, the rich, the noble, the white, are those who can best take education. One has but to express this to realize its utter futility. But perhaps the most dangerous thing among us is for us, without thought to imitate the white world and assume that we

can choose students at Fisk because of the amount of money of which their parents have happened to get hold of. That basis of selection is going to give us an extraordinary aggregation. We want by the nicest methods possible, to seek out the talented and the gifted among our constituency, quite regardless of their wealth or position, and to fill this university and similar institutions with persons who have got brains enough to take fullest advantage of what the university offers. There is no other way. With teachers who know what they are teaching and whom they are teaching and the life that surrounds both the knowledge and the knower, and with students who have the capacity and the will to absorb this knowledge, we can build the sort of Negro university which will emancipate not simply the black folk of the United States, but those white folk who in their effort to suppress Negroes have killed their own culture -- men who in their desperate effort to replace equality with caste and to build inordinate wealth on a foundation of abject poverty have succeeded in killing democracy, art, and religion.

41-2-96

Only a universal system of learning, rooted in the will and condition of the masses and blossoming from that manure up toward the stars is worth the name. Once builded it can only grow as it brings down sunlight and star shine and impregnates the mud. The chief obstacle in this rich land endowed with every national resource and with the abilities of a hundred different peoples -- the chief and only obstacle to the coming of that kingdom of economic equality which is the only logical end of work, is the determination of the white world to keep the black world poor and make themselves rich. The disaster which this selfish and short-sighted policy has brought lies at the bottom of this present depression, and too, its cure lies beside it. Your clear vision of a world without wealth, of capital without profit, of income based on work alone, is the path out not only for you but for all men.

SEGREGATION AND IDEALS

Is not this a program of segregation, emphasis of race and particularism as against national unity and universal humanity? It is, and it is not by choice but by force; you do not get humanity by wishing it nor do you become American citizens simply

because you want to. A Negro university from its high ground of unfaltering facing of the Truth, from its unblinking stare at hard facts, does not advocate segregation by race, it simply accepts the bald fact that we are segregated, apart, hammered into a separate unity by spiritual intolerance and legal sanction backed by mob law, and that this separation is growing in strength and fixation; that it is worse today than a half century ago and that no character, address, culture or desert is going to change it, in our day or for centuries to come.

Recognizing this brute fact, groups of cultured, trained, and devoted men gathering in great institutions of learning proceed to ask: What are we going to do about it? It is silly to ignore and gloss the truth; it is idiotic to proceed as though we were white or yellow, English or Russian. Here we stand. We are American Negroes. It is beside the point to ask whether we form a real race. Biologically we are mingled of all conceivable elements, but race is psychology, not biology; and psychologically we are a unified race with one history, one red memory, and one revolt. It is not ours to argue whether we will be segregated or whether we ought to be a caste. We are segregated; we are a caste. This is our given and at present unalterable fact. Our problem is: How far and in what way can we consciously and scientifically guide our future so as to insure our physical survival, our spiritual freedom and our social growth? Either we do this or we die. There is no alternative. If America proposes the murder of this group, its moral descent into imbecility and crime and its utter loss of manhood, self-assertion, and courage, the sooner we realize this the better. By that great line of McKay: "If we must die, let it not be like hogs."

But the alternative of not dying like hogs is not that of dying or killing like snarling dogs. It is rather conquering the world by thought and brain and plan; by expression and organized cultural ideals. Therefore, let us not beat futile wings in impotent frenzy, but carefully plan and guide our segregated life, organize in industry and politics to protect it and expand it, and above all to give it unhampered spiritual expression in art and literature. It is the council of fear and cowardice to say this cannot be done. What must be can be and it is only a question of Science and Sacrifice to bring the great consummation.

What that will be, none knows. It may be a great physical segregation of the world along the Color Line; it may be an economic rebirth which insures spiritual and group integrity amid physical diversity. It may be utter annihilation of class and race and color barriers in one ultimate mankind, differentiated by talent, susceptibility and gift -- but any of these ends are matters of long centuries and not years. We live in years, swift flying, transient years. We hold the possible future in our hands but not by wish and will, only by thought, plan, knowledge, and organization. If the college can pour into the coming age an American Negro who knows himself and his plight and how to protect himself and fight race prejudice, then the world of our dream will come and not otherwise.

41-2-98

The golden days are gone. Why do we wait
So long upon the marble steps, blood
Falling from our open wounds? and why
Do our black faces search the empty sky?
Is there something we have forgotten?
Some precious thing we have lost,
Wandering in strange lands?

What we have lost is the courage of independent self-assertion. We have had as our goal -- American full citizenship, nationally recognized. This has failed -- flatly and decisively failed. Very well. We're not dead yet. We are not going to die. If we use our brains and strength there is no way to stop our ultimate triumph as creators of modern culture -- if we use our strength and brains.

And what pray stops us but our dumb caution -- our fear -- our very sanity. Let us then be insane with courage.

Like a mad man's dream, there came
One fair, swift flash to me
Of distances, of streets aflame,
With joy and agony;
And further yet, a moonlit sea
Foaming across its bars
And further yet, the infinity
Of wheeling suns and stars.

ENVOY

There was no aftermath of this speech save perhaps a general satisfaction. But to me it was the beginning of a new line of thought. The argument of the Howard speech did not seem to me to be altogether final. Something was missing and from that day I began to read and study Karl Marx. I began to understand my recent visit to Russia. I became interested in the New Deal and I wanted to supplement the liberalism of Charles Sumner with the new economic contribution of the twentieth century.

~~1938~~

~~On the fiftieth anniversary of my graduation~~ I spoke ~~again~~ at Fisk University with kindly welcome ~~and expectation~~. Many of the professors, remembering the rather cryptic title of my other speeches, searched the encyclopaedias for "Saint Orgne" which appeared as the title of my address. They did not find it. I had to explain that it was but a familiar anagram of a well-known word: Negro. I was here speaking a word of benediction; not merely to the three surviving members of my own class or to the graduating class of the day; ~~I was speaking~~ but to the intelligent colored ~~citizens~~ of 1938 ~~and seeking to express a certain philosophy of life~~. I was at the entrance of the valley of the shadow of death and the view was ~~splendid~~ absorbing

The Revelation of Saint Orgne the Damned

Saint Orgne stood facing the morning and asked: What is this life I see? Is the dark damnation of color, real? or simply mine own imagining? Can it be true that souls wrapped in black velvet have a destiny different from those swathed in white satin or yellow silk, when all these covering are fruit of the same worm, and threaded by the same hands? Or must I, ignoring all seeming difference, rise to some upper realm where there is no color nor race, sex, wealth nor age, but all men stand equal in the Sun?

Thus Orgne questioned Life on his Commencement morning, in the full springtide of his day. And this is the Revelation and the answer that came to Saint Orgne the Damned as he came to be called, as he stood on his Mount of Transfiguration, looking full at life as it is and not as it might be or haply as he would have it.

"In very truth, thou art damned, and may not escape by vain imagining nor fruitless repining. When a man faces evil, he does not call it good, nor evade it; he meets it breastforward, with no whimper of regret nor fear of foe."

"Blessed is he that reads and they that hear the words of this prophecy for the time is at hand. Grace be unto you and peace, from him which was and which is and is to come and from the seven spirits which are before his throne."

I, who also am your brother and companion in tribulation and in the kingdom and the patience, was in the isle that is called America. I was in the spirit and heard behind me a great Voice saying, "I am Alpha and Omega, the first and the last; and what thou seest write. I turned to the voice. I saw seven golden candlesticks with one in the midst of the candlesticks; and in his hands seven stars and out of his mouth went a sharp two edged sword. And when I saw him I fell at his feet as dead and he laid his right hand upon me saying unto me "Fear not. Write thou the things which thou has seen; the mystery of the seven stars and the seven golden candlesticks."

So Orgne turned and climbed the Seven Heights of Hell to view the Seven Stars of Heaven. The seven heights are Birth and Family; School and Learning; the University and Wisdom; the great snow-capped peak of Work; the naked crag of Right and Wrong; the rolling hills of the Freedom of Art and Beauty; and at last, the plateau that is the Democracy of Race; beyond this there are no vales of Gloom—for the star above is the sun itself and all shadows fall straight before it.

Orgne descended into the valleys of the Shadow, lit only by the waving light of single candles set in seven golden candlesticks, struggling through noisome refuse of body and mind. Long years he strove, uphill and down, around and through seven groups of seven years until in the end he came back to the beginning, world-weary, but staunch; and this is the revelation of his life and thought which I, his disciple, bring you from his own hands.

A golden candlestick stood beneath a silver star, atop a high mountain and in the cold gray dawn of a northern spring. There was the first hint of apple blossoms and faint melody in the air; within the melody was the whisper of a Voice, which sighed and said: "Why should we breed black folk in this world and to what end?

Wherefor should we found families and how? Is not the world for such as are born white and rich?"

Then Orgne, half grown, lying prone, reared himself suddenly to his feet and shivering looked upward to light. The sun rose slowly above the mountain and with its light spake. Hear ye the Wisdom of the families of black folk:

Gentlemen are bred and not born. They are trained in childhood and receive manners from those who surround them and not from their blood. Manners maketh Man, and are the essence of good breeding. They have to do with forms of salutation between civilized persons; with the care and cleanliness and grooming of the body. They avoid the stink of bodily excretions; they eat their food without offense to others; they know that dirt is matter misplaced and they seek to replace it. The elementary rules of health become to them second nature and their inbred courtesy one to another makes life liveable and gracious even among crowds.

Now this breeding and infinite detail of training is not learned in college and may not be taught in school. It is the duty and task of the family group and once the infinite value of that training is missed it can seldom be replaced through any later agency. It is in vain that the university seeks to cope with ill-bred youngsters, foul-mouthed loafers and unwashed persons who have happened to pass the entrance examinations. Once in the earlier mission schools among American Negroes men tried to do this, knowing of the irreparable harm slavery had done the family group. They had some success right here in this institution; but the day when such effort is possible is gone. Unless a new type of Negro family takes the burden of this duty, we are destined to be, as we are too largely today, a bad-mannered, unclean crowd of ill-bred young men and women who are under the impression that they are educated.

For this task we have got to create a new family group; and a cultural group rather than a group merely biological. The biology and blood relationship of families is entirely subordinate and unimportant as compared with its cultural entity; with the presence of two persons who take upon themselves voluntarily the sacrificial priesthood of parents to children, limited in number and interval by intelligent and scientific birth-control, who can and will train in the elements of being civilized human beings: how to eat, how to sleep, how to wash, how to stand, how to walk, how to laugh, how to be reverent and how to obey.

It is not entirely our fault that we have missed, forgotten or are even entirely unaware of the cultural place of the family. In European and American civilization we have tried to carry out the most idiotic paradox that ever civilized folk attempted. We have tried to make babies both sins and angels. We have regarded sex as a disgrace and as eternal life. We talk in one breath of the Virgin Mary and of the Mother of God. And at the critical age of life for both men and women, we compel them to strain the last sinew of moral strength to repress a natural and beautiful appetite, or to smear it with deception and crime. We base female eligibility for marriage on exotic personal beauty and childlike innocence, and yet pretend to desire brains, common sense and strength of body. If an age thus immolates its ugly virgins, it will crucify its beautiful fools, with the result of making marriage a martyrdom that few enter with open eyes. The change from this has got to recognize the sin of virginity in a world that needs proper children; the right of the so-called unfathered child to be; the legal adoption into the cultural family of gifted and promising chil-

dren and the placing of black sheep, no matter who their parents are, under necessary restraint and correction. Amen.

The Voice ceased. As Orgne walked slowly down the mountain, he brooded long over the word he had heard, wondering vaguely how far the revelation was within or without his own soul; and then turning the message over in his mind, he thought of his own home, of the three small rooms, of the careful, busy mother and grandmother, of the dead father; and he mused: if one's start in life depends on breeding and not on color or unchangeable and unfathomable compulsions before births, surely I may live, even though I am black and poor.

There came a long space of Seven years. Orgne stood by the bank of the Golden River, with the second candlestick in his hand. He could not see the stars above, for it was nine o'clock of a sun-washed morning; but he knew they were there. He was celebrating all alone his entry into High School. None of his people save only his dead grandfather had ever gotten so far; but with the wave of disappointment which comes with all accomplishment, he muttered, "And why should they, why should I, dawdle here with elements of things and mere tools of Knowledge while both I and the world wait." The river flowed softly as he slept in the summer mildness. Daisies and buttercups waved above him. The grey fleecy clouds gathered and swiftly low thunder rolled; a bolt of heat lightning flashed across the sky. He slept on, yet heard the second star as it spoke:

Hear ye! This is the wisdom of the elementary school.

The difficulty and essential difficulty with Negro education lies in the elementary school; lies in the fact that the number of Negroes in the United States today who have learned thoroughly to read, write, and count is small; and that the proportion of those who cannot read, cannot express their thoughts and cannot understand the fundamentals of arithmetic, algebra and geometry is discouragingly large. The reason that we cannot do thorough college work and cannot keep high university standards is that the students in institutions like this are fundamentally weak in mastery of those essential tools to human learning. Not even the dumbest college professor can spoil the education of the man who as a child has learned to read, write, and cipher; so too Aristotle, Emmanuel Kant and Mark Hopkins together are powerless before the illiterate who cannot reason.

The trouble lies primarily, of course, in the elementary schools of the South; in schools with short terms; with teachers inadequate both as to numbers and training; with quarters ill-suited physically and morally to the work in hand; with colored principals chosen not for executive ability but for their agility in avoiding race problems; and with white superintendents who try to see how large a statistical showing can be made without expenditure of funds, thought nor effort.

This is the fault of a nation which does not thoroughly believe in the education of Negroes, and of the South which still to a large extent does not believe in any training for black folk which is not of direct commercial profit to those who dominate the state.

But the fault does not end there. The fault lies with the Negroes themselves for not realizing this major problem in their education and for not being willing and eager and untiring in their effort to establish the elementary school on a fundamental basis. Necessary as are laws against lynching and race segregation, we should put more money, effort, and breath

in perfecting the Negro elementary school than in anything else, and not pause nor think of pausing until every Negro child between five and fifteen is getting at least nine months' a year, five hours a day, five days in the week, in a modern school room, with the best trained teachers, under principals selected for training and executive ability, and serving with their teachers during efficiency and good behavior; and with the school under the control of those whose children are educated there.

Until this is done and so far as it is not done the bulk of university endowment is being wasted and high schools strive partially in vain. Amen.

Again flew seven years. Orgne was far from home and school and land. He was speaking an unknown tongue and looking upon the walls and towers, colors and sounds of another world. It was high noon and autumn. He sat in a lofty cathedral, glorious in the fretted stone lace-work of its proudly vaulted roof. Its flying buttresses looked down upon a grey and rippled lake; beyond lay fields of flowers, golden chrysanthemums and flaming dahlias and further the ancient university, where for a thousand years men had sought Truth. Around rose a symphony of sound, a miraculous blending of strings and brass, trumpet and drum which was the Seventh Symphony with its lovely interlacing of melody and soft solemn marches, breaking to little hymns and dances. He listened to its revelation gazing rapt at candlesticks and gilded star and whispered: "Why should I know and What, and what is the end of knowing? Is it not enough to feel? The angels in the choir sang No—Hear ye! For Wisdom is the principal thing.

There can be no iota of doubt that the chief trouble with the world and the overwhelming difficulty with American Negroes is widespread ignorance; the fact that we are not thoroughly acquainted with human history; of what men and peoples have thought and done in the seven thousand years of our cultural life. We are especially unacquainted with modern science; with the facts of matter and its constitution; with the meaning of time and space; with chemical reaction and electrical phenomena; with the history of the machine and the tool; with the unfolding of life in the vegetable and animal kingdoms; with the history of human labor; the development of our knowledge of the mind; the practical use of the languages of the world; and the methods of logical reasoning, beginning and ending with mathematics.

This great body of knowledge has been growing and developing for thousands of years, and yet today its mastery is in the hands of so few men, that a comparative small death roll would mean the end of human culture. Without this knowledge there can be no planning in economy; no substantial guidance in character building; no intelligent development of art. It is for acquaintanceship with this knowledge and the broadening of its field that the college and university exist. This is the reason and the only reason for its building among American Negroes and the work that it is accomplishing today is so infinitely less than that which with any real effort it might accomplish that one has a right to shudder at the misuse of the word university. Amen.

Orgne stood at twilight in the swamp. In seven more years, all the romance and glamour of Europe had sunk to the winter of America. It was twilight, and the swamp glowed with the mystery of sunset—long shafts of level burning light,—greens and yellows, purples and red; the whisper of leaves, the ghosts of dead and dying life. The sun died dismally,

22-41-119

and the clouds gathered and a drizzling rain began to fall with slow determination. Orgne shrank within himself. He saw the toil of labor and revolted. He felt the pinch of poverty and wept. "What is this stuff I hear," he cried: "how can we marry and support a family without money? How can we control our schools without economic resource? How can we turn our churches from centers of superstition into intelligent building of character; and beyond this how shall we have time for real knowledge; and freedom of art; and effort toward world-wide democracy, until we have the opportunity to work decently and the resources to spend, which shall enable us to be civilized human beings?

Suddenly across the swamp and across the world and up from the cotton fields of Georgia rolled a Negro folk song. Orgne saw in music Jehovah and his angels, the Wheel in a Wheel. He saw the Golden Candlestick and heard the revelation of the Star: Hear ye! This is the teaching of the World of Work.

The most distressing fact in the present world is poverty; not absolute poverty, because some folk are rich and many are well-to-do; not poverty as great as some lands and other historical ages have known; but poverty more poignant and discouraging because it comes after a dream of wealth; of riotous, wasteful and even vulgar accumulation of individual riches, which suddenly leaves the majority of mankind today without enough to eat; without proper shelter; without sufficient clothing.

Nowhere was the dream of wealth, for all who would work and save, more vivid than here in the United States. We Negroes sought to share that vision and heritage. Moreover, the poverty which the world now experiences, comes after a startling realization of our national endowment of rich natural resources and our power to produce. We have the material goods and forces at command, the machines and technique sufficient to feed, clothe the world, educate children and free the human soul for creative beauty and for the truth that will widen the bounds of all freedom.

That does not mean that we could have enough goods and services for present extravagance, display and waste; but if there were neither idle rich nor idle poor; if sharing of wealth were based not on owning but only on effort, and if all who are able did their share of the world's work or starved, and limited their consumption to reasonable wants, we could abolish poverty.

Why have we not done this? It is because of greed in the production and distribution of goods and human labor. We discovered widely in the 18th century and the 19th the use of capital and it was a great and beneficent discovery; it was the rule of sacrificing present wealth for greater wealth to come. But instead of distributing this increase of wealth primarily among those who make it we left most workers as poor as possible in order further to increase the wealth of a few. We produced more wealth than the wealthy could consume and yet used this increased wealth to monopolize materials and machines; to buy and sell labor in return for monopoly ownership in the products of labor and for further wealth.

We thus not only today produce primarily for the profit of owners and not for use of the mass of people, but we have grown to think that this is the only way in which we can produce. We organize industry for private wealth and not for public weal, and we argue often honestly and conscientiously, that no human planning can change the essentials of this process. Yet the process itself has failed so many times and so

abysmally, that we are bound to change or starve in the midst of plenty. We are encouraging war through fear of poverty that need not exist; we face the breakdown of production by persistent overproduction of the kinds of goods which we cannot afford to consume.

What can we do? There is only one thing for civilized human beings to do when facing such a problem, and that is to learn the facts, to reason out their connection and to plan the future; to know the truth; to arrange it logically and to contrive a better way. In some way, as all intelligent men acknowledge, we must in the end, produce for the satisfaction of human needs and distribute in accordance with human want. To contend that this cannot be done is to face the Impossible Must. The blind cry of reaction on the one hand, which says that we cannot have a planned economy and, therefore, must not try; and the cry of blood which says that only by force can selfishness be curbed, are equally wrong. Is it not a question of deliberate guilt but of selfish stupidity. The economic world can only be reformed by Spartan restraint in the consumption of goods and the use of services; by the will to work not simply for individual profit but for group weal; not simply for one group but for all groups; and the freedom to dream and plan.

This reformation of the world is beginning with agony of soul and strain of muscle. It can and must go on, and we black folk of America are faced with the most difficult problem of realizing and knowing the part which we have got to play in this economic revolution for our own salvation and for the salvation of the world. This is not easy, for we are cut off from the main effort by the lesions of race; by the segregation of color; by the domination of caste. And yet nothing could be more fatal to our own ideals and the better ideals of the world than for us with unconscious ignorance or conscious perversity or momentary applause to join the forces of reaction; to talk as though the 20th century presented the same oversimplified path of economic progress which seemed the rule in the 19th: work, thrift and wealth by individual effort no matter what the social cost.

The economic illiteracy prevalent among American Negroes is discouraging. In a day when every thinker sees the disorganization of our economic life and the need of radical change, we find the teachers of economics in colored colleges, the Negro business men, Negro preachers and writers to a very large extent talking the language of the early 19th century; seeking to make themselves believe that work for any kind of wages, saving at any sacrifice and wealth on any terms not excluding cheating, murder, and theft, are ways of the world still open and beckoning to us. Selah!

Orgne listened and sat staring at the sodden cotton field beyond the somber swamp. Always the swinging thunder of song surged above—Jordan rolled; the rocks and the mountains fled away, the Way was crowded; and Moses went down, away down among the cabins in the cotton patch to the crazy church and hysterical crowd of penitents all praying madly to escape debt. Orgne talked to the planter and said "let my people go." and worked with the tenants seven long years.

Seven years he toiled and in the end had a little nest of land holders owning one large unmortgaged farm in twenty shares; working their crops and buying their provisions in common and dividing them with equal justice. Poor, Orgne came to them and poor he finally went away leaving them poor too but fed and sheltered. They called him Saint. He smiled and looked upward to the star; but the preacher looked down to the dirt and

22-41-121

mortgaged it behind the backs of the trusting flock and ran away with the money.

Saint Orgne cursed and cried how shall we plan a new earth without honest men and what is this thing we call a church. So, angry, disillusioned and weary he came to a land where it was always afternoon, and he laid him prone on the earth and slept.

Seven years he slept and in seven years came a thousand miles and more to Ohio, to teach in college. At high noon he stood before the chapel and heard the singing of a hymn in the haze of early spring time. Around him stretched the wide, undulating valleys of the Miami, the Ohio, and the realm of the Mississippi. He looked up and suddenly hated the walls that shut out the stars; he hated the maudlin words of the hymn quite as much as he loved the lilt of the voices that raised it. He loved the flowers—the violets and morning glory, the blossoming fruit that filled the yards about. Then came the earthquake; then the earth trembled and swayed; far off in San Francisco a city fell and around the nation quivered. In the midst of the rushing, swaying crowd, again Orgne, after seven years, awoke and found the Golden Candlestick in his hands, and heard the low clear revelation of the Star:

Saint Orgne the Damned, behold the Vision of the Seven Black Churches of America,—the Baptist, the four wings of Methodism, the Roman and Episcopal Catholics.

Their five millions of members in 40,000 groups, holding $200,000,000 in their hands, are the most strongly organized body among us; the first source of our group culture, the beginning of our education—what is this church doing today toward its primary task of teaching men right and wrong, and the duty of doing right?

The flat answer is nothing if not less than nothing. Like other churches and other religions of other peoples and ages, our church has veered off on every conceivable side path, which interferes with and nullifies its chief duty of character building.

It has built up a body of dogma and fairy tale, fantastic fables of sin and salvation, impossible creeds and impossible demands for ignorant unquestioning belief and obedience. Ask any thorough churchman today and he will tell you, not that the object of the church is to get men to do right and make the majority of mankind happy, but rather that the whole duty of man is to "believe in the Lord Jesus Christ and be saved;" or to believe "that God is God and Mohammed is his prophet;" or to believe in the "one Holy and Catholic church," infallible and omniscient; or to keep the tomb of one's grandfather intact and his ideas undisputed.

Considering how desperately, great and good men have inveighed against these continuing foibles of priesthood for many thousand years, and how little in essence has been accomplished, it may seem hopeless to return to the attack today, but that is precisely what this generation has to do. The function of the Negro church, instead of being that of building edifices, paying old debts, holding revivals and staging entertainments, has got to be brought back, or shall we say forward, to the simple duty of teaching ethics. For this purpose the Hebrew scriptures and the New Testament canon will not suffice. We must stop telling children that the lying and deceitful Jacob was better than the lazy Esau, or that the plan of salvation is anything but the picture of the indecent anger and revenge of a bully.

We can do this, not so much by the attacking of outworn superstition and conventional belief as by hearty research into real ethical questions. When is it right to lie? Do low wages mean stealing? Does the prosperity of a country depend upon the number

of its millionaires? Should the state kill a murderer? How much money should you give to the poor? Should there be any poor? And as long as there are, what is crime and who are the criminals?

So Saint Orgne preached the word of life from Jeremiah, Shakespeare and Jesus, Confucius, Buddha and John Brown; and organized a church with a cooperative store in the Sunday school room; with physician, dentist, nurse and lawyer to help, serve and defend the congregation; with library, nursery school, and a regular succession of paid and trained lecturers and discussion; they had radio and moving pictures and out beyond the city a farm with house and lake. They had a credit union, group insurance and building and loan association. The members paid for this not by contributions but by ten dollars a month each of reguiar dues and those who would join this church must do more than profess to love God.

Seven years he served and married a woman not for her hair and color but for her education, good manners, common sense and health. Together they made a home and begot two strong intelligent children. Looking one day into their eyes Orgne became suddenly frightened for their future. He prayed "Oh life let them be free!"

So soon, so soon, Orgne sighed, the world rolls around its sevens of years. It was midsummer and he was sailing upon the sea. He was bound for Africa on a mission of world brotherhood. Behind and waiting were wife and children, home and work. Ahead was the darker world of men yellow, brown, and black. Dinner was done and the deck empty save for himself; all were within the magnificent saloon massed with tall vases of roses and lilies, priceless with tapestry and gilding, listening to the great organ which the master played. The largo whispered, smiled and swelled upward to tears. Then the storm swept down. Then the ocean, lashed to fury by the wind, bellowed and burned; the vast ship tossed like a tortured soul, groaned and twisted in its agony. But Orgne smiled. He knew that behind the storm and above the cloud the evening stars were singing, and he listened to the rhythm of their words: Hear Ye! This is the Freedom of Art which is the Beauty of Life.

Life is more than meat, even though life without food dies. Living is not for earning, earning is for living. The man that spends his life earning a living, has never lived. The education that trains men simply for earning a living is not education.
